1. Introduction

1.1 Preparation

In this report, the terms "we", "us", "our" and "the Company" refer to Pharvaris N.V. and, where appropriate, its subsidiaries.

This report has been prepared by the Company's board (the "Board") pursuant to Section 2:391 of the Dutch Civil Code ("DCC") and also contains (i) the Company's statutory annual accounts within the meaning of Section 2:361(1) DCC and (ii) to the extent applicable, the information to be added pursuant to Section 2:392 DCC. The 2025 consolidated financial statements are prepared in accordance with the IFRS as issued by the European Union (IFRS-EU) and the company financial statements including the notes thereon have been prepared in accordance with Part 9 of Book 2 of the Dutch Civil Code. Section 2:362 (8) of the Dutch Civil Code, which allows companies that apply IFRS-EU in their consolidated financial statements to use the same measurement principles in their company financial statements. This report relates to the fiscal year ended December 31, 2025 and, unless explicitly stated otherwise, information presented in this report is as at December 31, 2025.

1.2 Forward-looking statements

This Annual Report contains certain statements that are or may be forward-looking statements with respect to us, our industry and our business that involve substantial risks and uncertainties. All statements other than statements of historical fact contained in this Annual Report, including statements regarding our future financial condition, results of operations and/or business achievements, including, without limitation, statements containing the words "believe," "anticipate," "expect," "estimate," "may," "could," "should," "would," "will," "intend" and similar expressions are forward-looking statements. We have based these forward-looking statements largely on our current expectations and projections about future events and trends that we believe may affect our financial condition, results of operations, business strategy and financial needs. Such forward-looking statements involve unknown risks, uncertainties and other factors which may cause our actual results, financial condition, performance or achievements, or industry results, to be materially different from any future results, performance or achievements expressed or implied by such forward-looking statements. Factors that might cause such a difference include, but are not limited to:

- uncertainty in the outcome of our interactions with regulatory authorities, including the U.S. Food and Drug Administration or FDA, with respect to clinical trials in the U.S. and our ability to resolve any issues to the satisfaction of the FDA or any regulatory agency in a timely manner;
- the expected timing, progress, or success of our product candidates, especially for XR (extended-release deucricitibant tablets), which is in late-stage global clinical trials;
- our ability to replicate the efficacy and safety demonstrated in the CHAPTER-1 study in ongoing and future nonclinical studies and clinical trials;
- risks arising from epidemic diseases which may adversely impact our business, nonclinical studies and clinical trials, the outcome and timing of regulatory approvals and the value of our ordinary shares;
- the timing, costs and other limitations involved in obtaining regulatory approval for our product candidates IR (immediate-release deucricitibant capsules) and XR or any other product candidate that we may develop in the future;
- our ability to market, commercialize and achieve market acceptance for our product candidates IR and XR or any of our other product candidates that we may develop in the future, if approved;
- our ability to establish commercial capabilities or enter into agreements with third parties to market, sell and distribute our product candidates;
- our dependence on third parties to perform critical activities related to the research, nonclinical safety and toxicology studies, development and manufacturing of our product candidates;
- disruptions at the FDA and other government agencies;
- the expense, time and uncertainty involved in the development and consistent manufacturing and supply of our product candidates, some or all of which may never reach the regulatory approval stage;
- our ability to raise capital when needed and on acceptable terms;
- our ability to enter into any new licensing agreements or to maintain any licensing agreements with respect to our product candidates;
- our reliance on collaboration partners and licensees, whose actions we cannot control;
- the willingness of private insurers and other payors to provide reimbursement for our products;
- regulatory developments in the United States, the European Union and other jurisdictions;
- the outcome and timing of price negotiations with governmental authorities;

3 Table of Contents

- our ability to compete in the pharmaceutical industry, including with respect to existing therapies, emerging potentially competitive therapies and with competitive generic products;
- our ability to protect our intellectual property and know-how and operate our business without infringing the intellectual property rights or regulatory exclusivity of others;
- side effects or adverse events associated with the use of our product candidates;
- our ability to defend against costly and damaging liability claims resulting from the testing of our product candidates in the clinic or, if, approved, any commercial sales;
- the loss of any of our key personnel;
- our estimates of market sizes and anticipated uses of our product candidates;
- our estimates of future performance;
- our estimates regarding anticipated operating losses, future revenues, expenses, capital requirements and our needs for additional financing;
- our ability to comply with existing or future laws and regulations in a cost-efficient manner;
- our ability to manage negative consequences from changes in applicable laws and regulations, including tax laws;
- our ability to maintain an effective system of internal control over financial reporting;
- our expectations regarding the time during which we will be a foreign private issuer; and
- changes and uncertainty in general market, political and economic conditions, including as a result of inflation and the conflict between Russia and Ukraine and the conflict in the Middle East.

In addition, statements that “we believe” and other similar statements reflect our belief and opinions on the relevant subject. These statements are based upon information available to us as of the date of this Annual Report, and while we believe such information forms a reasonable basis for such statements, such information may be limited or incomplete, and our statements should not be read to indicate that we have conducted an exhaustive inquiry into, or review of, all potentially available relevant information. These statements are inherently uncertain, and investors are cautioned not to unduly rely upon these statements.

You should read this Annual Report and the documents that we reference in this Annual Report and have filed as exhibits to the Annual Report, completely and with the understanding that our actual future results may be materially different from what we expect. We qualify all of our forward-looking statements by these cautionary statements.

[4Table of Contents](#)

2. Business

2.1 History and development of the Company

We are a late-stage biopharmaceutical company focused on the development and commercialization of innovative therapies for rare diseases with significant unmet need, initially focused on angioedema and other bradykinin-mediated diseases. Our first molecule, deucricitbant (previously referred to as PHA-022121 or PHA121), is a novel, oral, small-molecule bradykinin B2 receptor antagonist under development for the prevention or treatment of attacks due to bradykinin-mediated angioedema (AE-BK), including hereditary angioedema (HAE) and acquired angioedema due to C1-inhibitor deficiency (AAE-C1INH). Deucricitbant has the potential to address unmet medical needs by bringing improvements beyond the therapeutic profile of existing medicines and providing patients with quality of life and convenience that is superior to current standard-of-care. We believe deucricitbant has the potential to provide injectable-like efficacy™ with a well-tolerated profile and the convenience of an oral therapy for both the prophylactic and on-demand treatment of HAE attacks.

HAE is a rare and potentially life-threatening genetic condition with symptoms that include episodes of debilitating and often painful swelling in the hands, feet, face (lips and tongue), gastrointestinal tract, urogenital region, or airways. Attacks are unpredictable in frequency, location, timing, and severity, and can be caused by multiple types of triggers. According to scientific publications, patients experience a median of 14 attacks per year, and half of patients experience a potentially life-threatening airway attack at least once in their lifetime. Airway attacks are particularly dangerous and can lead to asphyxiation. If left untreated, attacks can last multiple days and are commonly painful, leading to multiple sick days and even hospitalization. According to HAE International, as of October 2014, HAE affected from 1:30,000 to 1:80,000 individuals globally, or at least 7,000 patients in the U.S. and at least 15,000 patients in the EU.

AAE-C1INH is a rare disorder with an estimated prevalence of approximately 1:500,000 patients. The disease manifests with episodes of unpredictable swelling that occur as a result of inadequate control of the kallikrein/kinin system, due to C1-inhibitor deficiency, resulting in excessive bradykinin formation. These episodes of swelling can be debilitating, painful, and even lethal, similar to HAE. However, AAE-C1INH results from underlying conditions such as lymphoproliferative disorders, plasma cell dyscrasias, or autoimmune disorders, and occurs either as a result of consumption of C1-inhibitor (C1INH) owing to activation of the classical complement pathway or as a result of neutralization by autoantibodies. There are no approved medicines available to treat or prevent AAE-C1INH.

Bradykinin-mediated vascular leakage and angioedema formation via activation of its bradykinin B2 receptor is involved in various types of angioedema (hereditary or acquired) with different underlying pathogenetic mechanisms. Bradykinin B2 receptor inhibition is a clinically validated mechanism for the treatment of HAE, as demonstrated by icatibant, which is a peptide bradykinin B2 receptor antagonist approved in Europe in 2008 and in the United States in 2011 (as FIRAZYR).

Deucricitbant is designed to block the interaction of bradykinin with the bradykinin B2 receptor, rather than blocking an upstream signal in one of the bradykinin production cascades as other treatments; therefore, deucricitbant may prevent bradykinin aberrant signaling regardless the underlying pathway that produces bradykinin and may address a broader range of angioedema attacks than other available treatments.

Our legal and commercial name is Pharvaris N.V. In connection with our initial public offering in the first quarter of 2021, we converted the legal form of our company under Dutch law from a private company with limited liability (besloten vennootschap met beperkte aansprakelijkheid) to a public company with limited liability (naamloze vennootschap) and changed our name from Pharvaris B.V. to Pharvaris N.V. Pharvaris B.V. was incorporated on September 30, 2015, and is based in Leiden, the Netherlands. Our principal executive offices are located in Emmy Noetherweg 2, 2333 BK Leiden, the Netherlands, telephone: +31 (0)71 2036 410. Our agent for service of process in the United States is Chris Deon, who is registered at PO Box 121, Buckingham, PA 19407-4550, USA.

Our principal expenditures since inception have been our research and development expenses, as more fully described elsewhere in this Annual Report. To date, we have relied solely on the issuance of equity securities to finance our operations and internal growth. For more information, please see "ITEM 5. OPERATING AND FINANCIAL REVIEW AND PROSPECTS—B. Liquidity and Capital Resources."

The SEC maintains an Internet website that contains reports and other information about issuers, like us, that file electronically with the SEC. The address of that website is www.sec.gov. Our website can be found at www.pharvaris.com. The information on our website is not incorporated by reference into this Annual Report, and you should not consider information contained on our website to be a part of this Annual Report.

2.2 Overview

Deucricitbant may address unmet medical needs of people living with AE-BK by both preventing attacks from occurring, using an extended-release (XR) tablet formulation of deucricitbant (previously referred to as PHVS719), as well as treat the manifestations of attacks, using an immediate-release (IR) capsule formulation of deucricitbant (previously referred to as PHVS416). The XR tablet formulation is designed to maintain therapeutic levels for over 24 hours and to achieve a steady-state plasma concentration within 72 hours, supporting a once-daily dosing regimen. The IR capsule formulation is designed to rapidly reach therapeutic exposure in order to mitigate HAE attacks symptoms quickly and completely with a single oral dose.

In our Phase 1 clinical trials to-date, we have observed rapid exposure and predictable linear pharmacokinetics (PK) with and without food. In addition, we observed deucricitbant to be a potent antagonist of the bradykinin B2 receptor, in vitro and in vivo with healthy volunteers. We conducted a proof-of-concept clinical trial testing the effects of bradykinin in healthy volunteers in our bradykinin-challenge trial, where we evaluated the effect of deucricitbant on cardiovascular parameters affected by bradykinin such as blood pressure, heart rate

5Table of Contents

and cardiac output in healthy volunteers, and evaluated the pharmacodynamic (PD) and PK of deucricitbant to generate a PK/PD correlation model for deucricitbant. The bradykinin challenge was validated as a surrogate assessment for dose selection in the original development program for icatibant, as reviewed by the FDA and the EMA. From the bradykinin challenge model, we were able to predict the efficacious dose range and the duration of effect of a single oral dose of deucricitbant; the topline data from our Phase 2 RAPIDe-1 trial treating HAE attacks were consistent with the predictions of the bradykinin challenge in both onset of symptom relief and duration of effect (use of rescue medication).

In our Phase 2 placebo-controlled trial evaluating the efficacy and tolerability of deucricitbant IR capsules for the on-demand treatment of attacks in patients with HAE type 1 and 2 (RAPIDe-1), a statistically significant and clinically meaningful reduction of the patient-reported symptoms of HAE was observed for the attacks treated with all doses of deucricitbant (10, 20, 30 mg) compared to placebo-treated attacks. The study's primary endpoint—symptom relief at four hours after treatment with study drug—as well as all key secondary efficacy endpoints were met. Consistently with its pharmacokinetic profile, deucricitbant IR demonstrated rapid onset of action, symptom relief, and resolution of the manifestations of HAE attacks as well as sustained clinical effects, with consistent findings across outcome measures. In addition, deucricitbant IR substantially reduced the use of rescue medication compared to placebo. Deucricitbant was well tolerated at all dose levels. We commenced RAPIDe-1 in February 2021 and reported positive topline Phase 2 data in December 2022.

Following the readout of RAPIDe-2, we initiated RAPIDe-3, a global, pivotal Phase 3, placebo-controlled study to evaluate deucricitbant IR capsule (20 mg) for the on-demand treatment of attacks in people 12 years and older with HAE, in March 2024 and reported topline data in December 2025. Deucricitbant demonstrated a clinically differentiated profile by meeting the primary and all key secondary efficacy endpoints with statistical significance; compared to placebo, deucricitbant reduced the time to onset of symptom relief (1.28 hours), time to End of Progression™ (17.47 minutes), time to complete symptom resolution (11.95 hours), as well as all other key secondary endpoints. Deucricitbant-treated attacks resulted in less second dose or rescue medication than placebo-treated attacks. In RAPIDe-3, deucricitbant was well tolerated with no treatment-related serious adverse events and no participants discontinuing treatment due to treatment-emergent adverse events. Pharvaris plans to submit a New Drug Application (NDA) with the U.S. Food and Drug Administration (FDA) in the first half of 2026 for the on-demand treatment of acute attacks of HAE.

In our Phase 2 placebo-controlled trial evaluating the efficacy and the safety and tolerability of deucricitbant for long-term prophylaxis against angioedema attacks in HAE type 1 and 2 (CHAPTER-1), a statistically significant and clinically meaningful reduction in mean monthly attack rate was observed compared to placebo-treated attacks. The study's primary endpoint was met as 40 mg per day orally administered deucricitbant significantly reduced the mean monthly HAE attack rate by 84.5% compared to placebo. In the analysis of the secondary endpoints, deucricitbant demonstrated clinically meaningful improvement in the severity of attacks and a decrease in the number of attacks treated with on-demand medication. Participants on deucricitbant treatment experienced a meaningful improvement in their quality of life. Throughout 12 weeks of treatment in CHAPTER-1, both doses of deucricitbant were well-tolerated. There were no serious adverse events, no severe treatment-emergent adverse events, and no adverse events leading to treatment discontinuation. We commenced CHAPTER-1 in November 2021 using twice-daily dosing of deucricitbant IR capsules as a proof-of-concept for once-daily deucricitbant XR tablets, and announced positive topline data in December 2023. We believe these positive Phase 2 data support further development of deucricitbant as a potential oral prophylactic therapy for HAE attacks.

In December 2024, we initiated CHAPTER-3, a global, pivotal, randomized, double-blind, placebo-controlled Phase 3 study of orally administered deucricitbant extended-release tablet for the prophylaxis against angioedema attacks in adults and adolescents (12 years and older) with HAE. The study aims to enroll approximately 81 participants with HAE and randomize them in a 2:1 ratio to receive deucricitbant XR tablet (40 mg/day), which is currently the intended commercial dosage, or placebo, once daily for 24 weeks. The primary endpoint of the study is to evaluate the efficacy of deucricitbant compared to placebo for prophylaxis against angioedema attacks as measured by the time-normalized number of investigator-confirmed HAE attacks during the 24-week treatment period. Other objectives of the study include evaluating additional clinically relevant outcomes, deucricitbant's safety and tolerability, pharmacokinetics and its impact on health-related quality of life measures in the prophylactic setting.

In addition, we are also running open-label extension studies in both on-demand (RAPIDe-2) and prophylactic (CHAPTER-4) settings to collect long-term safety and efficacy data in HAE patients.

In October 2025, we initiated CREAATE, a global, pivotal Phase 3 study to assess the efficacy and safety of deucricitbant for the prophylactic and on-demand treatment of AAE-C1INH attacks. In part 1 of CREAATE, participants receive either deucricitbant XR tablet (40 mg) or placebo once daily for 12 weeks to evaluate deucricitbant XR as a prophylactic treatment of AAE-C1INH attacks. In part 2, participants treat two attacks in a cross-over fashion, one attack with deucricitbant IR capsule (20 mg) and one with placebo, to evaluate deucricitbant IR as an on-demand treatment of AAE-C1INH attacks. Part 3 of CREAATE is the open-label extension portion of the study assessing the long-term safety and efficacy of deucricitbant immediate-release capsule (20 mg) for on-demand treatment.

Global sales of treatments for HAE in 2024 were estimated at approximately \$2.7 billion based on publicly available information and, according to public research reports, are forecast to grow at an approximately 5% compound annual growth rate to \$4.7 billion through 2036.

The mechanism of action of the most widely used on-demand HAE treatment is inhibition of the bradykinin B2 receptor; other mechanisms include replacement of C1INH or inhibition of plasma kallikrein. Most on-demand therapies are administered by injection, the burden of which causes people to delay or forego treatment of their attacks. An oral on-demand treatment could decrease the burden of therapy by improving convenience through easier administration, portability, and discretion. With the encouraging RAPIDe-3 results, combined with the trusted bradykinin B2 receptor antagonist mechanism seen in both icatibant and deucricitbant, we believe deucricitbant could become standard of care for on-demand treatment.

6Table of Contents

In the prophylactic space, there are several approved injectables, all of which have similar efficacy and tolerability, but continue to compete around less-frequent injections. An oral prophylactic that could offer injectable-like efficacy™, placebo-like tolerability, and the convenience of an oral, could potentially become a market leader in HAE. We believe HAE patients need alternatives that better meet their objectives for ease of treatment, disease control, and improved quality of life. We anticipate that there will be strong interest in safe and effective, orally delivered, small-molecule treatments that can match or improve upon the efficacy profile of existing therapies.

Differentiation of deucricitabant

Deucricitabant is a novel, highly potent and selective, orally bioavailable small molecule bradykinin B2 receptor antagonist. Deucricitabant has been observed to be a potent inhibitor *in vitro* as assessed using human recombinant bradykinin B2 receptors (150 pM); *ex vivo* as studied against endogenous bradykinin B2 receptors in a human umbilical vein model (350 pM); and *in vivo* in the human bradykinin-challenge model (170 pM). Potency as used in this Annual Report refers to the amount of drug required to produce a pharmacological effect of given intensity and is not a measure of therapeutic efficacy. Deucricitabant demonstrated over 4000-fold selectivity for the bradykinin B2 receptor when compared to approximately 170 other molecular targets, including the bradykinin-B1-receptor. We designed deucricitabant as a new chemotype with properties compatible with oral delivery.

We believe that deucricitabant, as the molecule underlying both the IR capsule formulation and the XR tablet formulation, has the potential to be highly differentiated for both the on-demand and prophylactic settings with the key benefits below:

In addition to the differentiation of our individual products, having on-demand and prophylactic products with the same active ingredient enables patients to maintain a trusted active medicine when they change their dosing regimen and delivery mechanism moving from on-demand to prophylactic treatment (or back). This may be particularly valued by children or adolescents who typically begin therapy with on-demand only and gradually move to prophylaxis as attack frequency increases (commonly after puberty). To our knowledge, we are the only company that will offer this option to patients.

Deucricitabant IR capsule. We believe that deucricitabant IR capsules, an on-demand, rapid exposure softgel capsule, has the potential to be highly differentiated for patients suffering from acute HAE attacks with the following benefits:

Efficacy	Faster onset of symptom relief	Median time to onset of symptom resolution as measured by patient global impression of change (PGI-C) “a little better” of 1.28 hours versus over 12 hours for placebo
		Median time to End of Progression™ of 17.47 minutes versus 228.67 minutes for placebo
	Shorter substantial symptom relief	Median time to substantial symptom relief by PGI-C “better” of 2.85 hours versus over 12 hours for placebo
		Median time to substantial symptom relief by patient global impression of severity (PGI-S) ≥1-level improvement of 2.41 hours versus over 12 hours for placebo
	Faster complete symptom resolution	Median time to complete symptom resolution as measured by PGI-S “none” of 11.95 hours versus over 24 hours for placebo
Safety/tolerability	Placebo-like safety/tolerability profile	No drug-related adverse events observed OR Well tolerated throughout therapeutic ranges as demonstrated by multiple clinical trials to-date
Convenience	Oral capsule	Easy to carry and swallow formulation with no injection required facilitates early treatment of acute AE-BK attacks
	Single dose resolution	83% of all attacks completely resolved with a single dose
MoA & product features	B2R antagonist	Clinically validated mechanism that works directly on the inducer of AE attacks and therefore addresses a potentially wider patient population than agents acting upstream in the KKS pathway
	Treatment flexibility	Two formulations, each optimized for either treatment or prevention of angioedema attacks
	Potency	More potent inhibitor than icatibant - Lowest dosage of any oral AE-BK on-demand treatment
	Half-life	Longer half-life than icatibant
	Absorption	Exposure exceeds the anticipated threshold therapeutic plasma level (EC85) in 30 minutes, with or without food

Deucricitabant XR tablet. We believe that deucricitabant XR tablets, a prophylactic extended-release tablet designed to be as a daily oral therapy, has the potential to be highly differentiated for HAE patients with the following benefits:

7Table of Contents

Lifecycle Management of Deucricitabant

In June 2025, we shared initial exploratory data around the potential expansion of the treatable population for deucricitabant. Using a biomarker assay of cold-activated plasma samples of people with HAE-1/2, as well as AAE-C1INH and HAE with normal C1INH (HAE-nC1INH), and angioedema of unknown cause (AE-UNK). The data from this biomarker study demonstrate our ability to identify people living with bradykinin-mediated angioedema, potentially expanding the treatable population of deucricitabant.

Expansion of the Portfolio

Our goal is to expand our portfolio with additional programs addressing other bradykinin-mediated diseases, building on our strategic strength and expertise in the bradykinin B2 receptor pathway. Our approach is to identify additional disease areas and indications with strong scientific rationale, high unmet medical need, a defined target population and significant differentiation potential. In collaboration and discussion with key opinion leaders, we are considering exploratory proof-of-concept studies to validate the potential of bradykinin B2 receptor antagonism in new indications that could include cardiovascular, allergy and immunology and others.

Our Strengths

Our company is built upon the following strengths:

- Broad strength and expertise in the bradykinin B2 receptor pathway. Members of the management team include the leadership team that developed FIRAZYR through European approval, and a key member from the TAKHZYRO development team. In addition, an inventor of icatibant is an advisor to the CEO;
- Deucricitabant is an orally available product candidate with a clinically validated mechanism of action that addresses serious unmet medical need in AE-BK;
- Positive RAPiDe-3 pivotal Phase 3 data clearly differentiate deucricitabant in the on-demand space by achieving statistical significance in the primary endpoint and all 11 secondary efficacy endpoints; faster time to onset of treatment response, shorter median time to substantial relief, earlier complete symptom resolution, and decreased use of second dose or rescue medication position deucricitabant IR to potentially become standard of care for on-demand treatment; RAPiDe-3 data will be the basis of our future marketing authorization applications;
- Derisked prophylactic program is supported by (1) positive CHAPTER-1 Phase 2 proof-of-concept data demonstrating injectable-like efficacy™, placebo-like tolerability, oral convenience, and improved quality of life; (2) optimized PK profile using XR formulation; and (3) demonstrated clinical excellence of Phase 2 to Phase 3 replicability seen in RAPiDe-1 and RAPiDe-3;
- We wholly own intellectual property – including issued, allowed and pending patent applications – covering deucricitabant and additional molecules, formulations and use. Our scientific experience allows us to leverage deep insight and experience in the bradykinin B2 receptor pathway to expand our portfolio into other bradykinin-mediated angioedema and bradykinin-mediated diseases beyond angioedema; and
- Our deep market expertise across the different functional areas of the company through the hiring of research, clinical development, medical and commercial staff with a long history in HAE.

Our Strategy

Our strategy is to develop and commercialize therapies that are superior to currently available treatment options and improve patient quality of life and convenience. Our initial approach for AE-BK is based upon extensive patient, physician, and payer research to identify the key needs in the market. According to our analysis, oral therapy remains the highest unmet need for both on-demand and prophylactic

8 [Table of Contents](#)

use in AE-BK. A therapy for AE-BK, whether for on-demand or prophylaxis, needs to offer strong efficacy, compelling tolerability and safety, and convenient administration. Our intention with the IR capsule formulation and the XR tablet formulation is to develop products for the on-demand and prophylactic setting that can meet all of these needs. We are not aware of any other therapies on the market or in development that are able to provide such a comprehensive value proposition across the spectrum for HAE.

The key elements of our strategy include:

- *Seek approval and access for deucricitbant for on-demand treatment of HAE utilizing a rapid-onset formulation, known as deucricitbant immediate-release (IR) capsules.* We intend to file for approval and commercialize deucricitbant IR capsules as a fast-acting, orally available, potent inhibitor and selective on-demand treatment for HAE attacks. We recently announced positive, pivotal topline data from RAPIDe-3, a global, pivotal Phase 3 clinical study of deucricitbant IR capsules for the on-demand treatment of HAE attacks in adults and adolescents.
- *Advance the development of deucricitbant for prophylactic treatment of HAE utilizing an extended-release formulation, known as deucricitbant extended-release (XR) tablets.* We intend to advance deucricitbant XR tablets through clinical development as an extended-release prophylactic treatment of HAE. We plan to leverage our clinical data and experience from the development of deucricitbant in the on-demand setting to expedite our efforts in the prophylactic setting. We are currently enrolling approximately 81 participants in CHAPTER-3, a global, pivotal Phase 3 clinical study of deucricitbant XR tablets for the prophylactic treatment of HAE attacks in adults and adolescents.
- *Expand the range of bradykinin-mediated angioedema indications to which deucricitbant can be applied.* In addition to Type 1 or Type 2 HAE, bradykinin is also an important mediator for other types of non-histaminergic angioedema, such as: hereditary angioedema with normal C1INH (HAE-nC1) and acquired angioedema (AAE) due to C1INH deficiency (AAE-C1INH). We included participants with HAE-nC1 in both RAPIDe-3 and CHAPTER-3 studies, enabling us to explore the efficacy and tolerability of deucricitbant in this population. Additionally, we initiated CREAATE, a clinical study to evaluate the efficacy and safety of deucricitbant for the prevention and treatment of AAE-C1INH.
- *Expand upon our expertise in the bradykinin B2 receptor pathway.* We intend to leverage the strategic strengths, insight, and deep experience of our team in the bradykinin B2 receptor pathway to identify additional disease areas and indications with strong scientific rationale, high unmet medical need, a defined target population and significant differentiation potential. As such, we will seek to develop follow-on product candidates that serve additional bradykinin-mediated diseases beyond angioedema, such as cardiovascular, allergy and immunology, neurological disease or others.
- *Commercialize our product candidates.* We intend to retain economic and commercial ownership of our current product candidates. If approved, we expect to independently commercialize both deucricitbant XR and deucricitbant IR in the United States. In other geographies, we are evaluating both independent commercialization and corporate partnerships. In 2026, we intend to file for approval of deucricitbant IR, and establish a focused commercialization and sales infrastructure suitable for AE-BK in the United States.

Bradykinin-Mediated Angioedema

Disease Overview

Bradykinin-mediated angioedema (AE-BK) is a rare and potentially life-threatening condition. AE-BK includes HAE and AAE-C1INH. HAE is an autosomal dominant disease, meaning that a defect in only one copy of the gene leads to symptoms and that it occurs at similar rates in both males and females. It is mainly caused by one or more mutations (inherited or spontaneous) in the SERPING1 gene, which codes for the C1-inhibitor protein (C1INH). Deficiency or malfunction of C1INH leads to uncontrolled synthesis and activity of plasma kallikrein and unconstrained bradykinin production. Excessive bradykinin production is the key mediator of symptoms in patients with AE-BK and manifests as edema attacks, most commonly in the limbs, face (lips and tongue), intestinal tract, urogenital region, and airways. HAE patients with a deficiency in C1INH activity are classified as Type 1 or Type 2. Type 1 is the most common form and results in low levels of circulating C1INH, and Type 2 results in production of a low function protein. An additional form of HAE, called normal C1INH HAE (HAE-nC1INH), can occur in patients with normal levels of C1INH for a variety of reasons including mutations in genes for Factor XIIa, plasminogen, angiopoietin-1, kininogen-1 and others. Moreover, angioedema attacks may occur in people with underlying disease, referred to as AAE-nC1INH.

Excessive bradykinin generation and increased risks for edema attacks in AE-BK may occur during conditions associated with inflammation, infections, ischemia, and allergic reactions. Attacks often lead to discomfort, pain and nausea but can become life-threatening in the case of airway obstruction, with a 30% risk of asphyxiation if the attack remains untreated. Although rare, at least half of AE-BK patients have experienced a life-threatening airway swelling attack and airway attacks remain a major cause of mortality in AE_BK patients. The number and severity of attacks vary highly between patients, and the most severely affected patients can experience attacks every few days. Attacks can occur spontaneously although they often are associated with anxiety, stress, minor trauma, surgery, or illnesses. Commonly, patients are alerted to an impending attack by prodromal symptoms which include rash, fatigue, and muscle aches. The severity of attacks is unpredictable and not related to their underlying frequency. Swelling typically develops over 24 hours and resolves within five days without treatment. Symptoms typically first present in young children and may take 5-10 years (until early adolescence or young adulthood) to be diagnosed. HAE-C1INH affects 1:50,000 individuals globally, HAE-nC1INH affects 1:250,000 individuals globally, and AAE-C1INH affects 1:500,000 individuals globally.

As a result of the lifelong nature of HAE, the severe attack burden occurring later and/or at distinct periods in the life of AAE-C1INH patients and the challenges related to the use of many of the injected therapies, patient surveys consistently indicate a desire for an oral

9 Table of Contents

therapy. We believe that an effective and tolerable oral agent has the potential to transform treatment for this disease and become standard of care for both prophylaxis and on-demand therapy.

Current Treatments and Their Limitations

There are currently two treatment approaches to the management of HAE: prevention of attacks (prophylaxis) and on-demand (acute) treatment of attacks.

- **On-Demand Treatment:** Currently approved on-demand therapies for HAE include C1INH replacement products such as human plasma-derived C1INH concentrates (BERINERT, CINRYZE, and CETOR) or recombinant human C1INH (RUCONEST); the plasma kallikrein inhibitor ecallantide (KALBITOR); the bradykinin B2 receptor antagonist icatibant (FIRAZYR, and available as a generic product—which is currently the most widely used therapy); and the oral kallikrein inhibitor sebetralstat (EKTERLY).
- **Prophylactic Treatment:** Currently approved prophylactic therapies for HAE include C1INH replacement products, such as intravenously delivered CINRYZE and subcutaneously delivered HAEGARDA/ BERINERT 2000/3000 (both of which require twice-weekly injections); the bi-weekly injectable monoclonal antibody plasma kallikrein inhibitor lanadelumab-flyo (TAKHZYRO)—current market leader; the oral small-molecule plasma kallikrein inhibitor berotralstat (ORLADEYO); the once-monthly injectable monoclonal antibody Factor XII inhibitor garadacimab-gxii (ANDEMBRY); and the once-monthly injectable plasma kallikrein inhibitor donidalorsen (DAWNZERA).
- **Acquired Angioedema:** There are currently no approved therapies for the treatment of AAE-C1INH.

Building on the trusted mechanism of bradykinin B2 receptor antagonism, established through 10+ years of icatibant real-world clinical practice, and unmet need from the AE-BK community, we believe that deucricitbant could become standard of care across both prophylaxis and on-demand treatment of AE-BK attacks.

Deucricitbant

Overview

Since the 1990s, many companies have tried but failed to discover oral bradykinin B2 receptor antagonists, as the bradykinin B2 receptor has proved to be a difficult target for the development of orally available antagonists. Bradykinin is the principal mediator of the signs and symptoms that represent AE-BK attacks, acting as a potent and selective agonist of the bradykinin B2 receptor.

In AE-BK, contact activation triggers increased activity of plasma kallikrein, resulting in excessive breakdown of high-molecular-weight kininogen (HMWK) and increased production of cleaved HMWK (cHMWK) and bradykinin. Excessive bradykinin generation, as in HAE, promotes vascular permeability by activating the bradykinin B2 receptor in vascular endothelium cells, leading to plasma extravasation and subcutaneous or submucosal tissue swelling typical of an angioedema attack.

As the figure below illustrates, treatment with deucricitbant, a novel, orally-bioavailable, highly potent and selective bradykinin B2 receptor antagonist is intended to block activation of the bradykinin B2 receptor by bradykinin, and, therefore, prevent or halt the angioedema process. Deucricitbant has the therapeutic potential for both prevention and on-demand treatment of attacks in people with AE-BK.

Deucricitbant is an orally bioavailable competitive antagonist of the bradykinin B2 receptor with high affinity and high antagonist potency. Deucricitbant has been observed to be a potent inhibitor in vitro as assessed using human recombinant bradykinin B2 receptors (150 pM); ex vivo as studied against endogenous bradykinin B2 receptors in a human umbilical vein model (350 pM); and in vivo in the human bradykinin-challenge model (170 pM).

Nonclinical Safety

10 [Table of Contents](#)

The conducted nonclinical package for deucricitbant includes secondary pharmacodynamics, safety pharmacology, genotoxicity, reproductive and developmental studies and general toxicity studies up to six months in rats and up to nine months in non-human primates. Deucricitbant did not demonstrate any *in vitro* or *in vivo* genotoxicity nor *in vitro* phototoxic potential. No findings considered relevant to humans were observed in GLP (Good Laboratory Practices)-compliant general toxicity studies in rats up to 3-months duration and in cynomolgus monkeys up to 9-months duration at doses up to the maximum tolerated dose in each species. Deucricitbant has not demonstrated any adverse effects on embryo-fetal survival and development in the humanized bradykinin B2 receptor transgenic rat or in the rabbit. Furthermore, male and female fertility studies showed no adverse effects of deucricitbant on gonadal function, mating behavior, and reproductive performance.

Findings were observed in the repeat-dose rat data package that were considered not to be related to bradykinin B2 receptor antagonism. Based on review of these nonclinical findings, in 2022, the FDA put a clinical hold on trials of deucricitbant in the U.S. Pharvaris aligned with the FDA to conduct and complete a 26-week rodent toxicology study to address the clinical holds. Following review of data from a preplanned interim analysis of the study, the FDA lifted the clinical hold on the IND application for deucricitbant for the on-demand treatment of HAE in June 2023. In January 2024, the FDA lifted the clinical hold on the IND application for deucricitbant for the prophylactic treatment of HAE attacks following review of the full data set from the completed 26-week rodent toxicology study.

Clinical Trial Program

Study Number	Short Description	Design	Status
Phase 1			
C001	Single ascending dose (SAD) and bradykinin challenge/SAD-proof of mechanism (POM)	Randomized, double-blind, placebo-controlled, single ascending dose to assess safety and proof-of-concept through BK-challenge	Completed
C002	SAD extension	Randomized, double-blind, placebo-controlled, single ascending dose to assess safety	Completed
C003	Absorption, metabolism, and excretion (mass balance)	Open-label, single dose 14 C-deucricitbant to characterize the absorption, metabolism, and excretion	Completed
C004	Drug-drug interaction (DDI)—CYP3A4 inhibitor (itraconazole) interaction	Open-label, single-sequence, crossover DDI study	Completed
C005	DDI—CYP interaction (cocktail)	Open-label, single-sequence, crossover DDI study	Completed
C006	Multiple ascending dose (MAD)	Randomized, double-blind, placebo-controlled, multiple ascending doses to assess safety and different doses	Completed
C009	Japanese PK bridging	Double-blind, randomized, single oral dose, two-period crossover comparing pharmacokinetics between Japanese and Caucasian volunteers	Completed
C010	Exploratory XR PK bridging	Open-label, randomized five-period crossover single-dose to assess bioavailability of two different extended-release formulations with and without food	Completed
C012	Hepatic impairment	Open-label, single dose to assess the effect of hepatic impairment on pharmacokinetics	Completed
C013	Renal impairment	Open-label, single dose to assess the effect of renal impairment on pharmacokinetics	Completed
C014	DDI Rabeprazole	Open-label, drug interaction study to investigate the effect of multiple doses of the gastric acid-reducing agent rabeprazole on the single dose pharmacokinetics of extended-release tablet.	Ongoing
C015	Confirmatory XR PK	Open-label, multiple doses to assess PK and safety of extended-release formulation	Completed
C016	DDI CYP3A4	Open-label, single-sequence, drug-drug interaction study to evaluate the effect of multiple oral doses of the moderate CYP3A4 inhibitor verapamil on the single dose PK deucricitbant	Completed
C017	DDI digoxin and rosuvastatin	Open-label, drug interaction study to investigate the effect of the extended-release tablet administered once daily on the pharmacokinetics of the P-gp substrate digoxin and the BCRP substrate rosuvastatin, administered as a drug cocktail	Ongoing
C018	XR Food Effect	Open-label, randomized, two-period, two-way cross-over study to assess the influence of a high-calorie, high-fat meal on the bioavailability of extended-release formulation	Ongoing
C019	XR multi-ethnicity study	Open-label, multiple dose study to compare PK of extended-release formulation between healthy Japanese, Chinese, and Caucasian volunteers	Ongoing

11 Table of Contents

C020	Bioavailability study	Open label, randomized, two-period, cross-over single-dose study under fasting condition	Ongoing
C021	XR4 Food Effect	Open-Label, randomized, two-period, cross-over single-dose study in healthy subjects to assess the influence of a high-calorie, high-fat meal on the bioavailability of a 40 mg extended-release (XR) formulation	Ongoing
Phase 2/3			
C201 RAPIDe-1	deucricitabant IR capsule on-demand	Phase 2, randomized, double blind, placebo-controlled, dose ranging study to assess safety and efficacy	Completed
C303 RAPIDe-2	deucricitabant IR capsule on-demand open-label extension	Phase 2/3, Extension Study to evaluate the safety of long-term on-demand treatment with deucricitabant for acute HAE attacks	Ongoing
C301 CHAPTER-1	proof-of-concept deucricitabant prophylaxis and open-label extension	A two-part Phase 2, randomized, double blind, placebo-controlled dose ranging study to Part 1: assess safety and efficacy of prophylactic treatment with deucricitabant and Part 2: evaluate long-term safety and efficacy for prophylactic treatment with deucricitabant	Completed
C306 RAPIDe-3	deucricitabant IR capsule on demand	A Phase 3, Randomized, Double-blind, Placebo-controlled, Cross-over Study of Oral Deucricitabant Soft Capsule for On-Demand Treatment of Attacks in Adolescents and Adults with Hereditary Angioedema	Completed
C305 CHAPTER-3	deucricitabant XR tablet prophylaxis	A Phase 3, Randomized, Double-blind, Placebo-controlled Study of Orally Administered Deucricitabant Extended-Release Tablet for Prophylaxis to Prevent Angioedema Attacks in Adolescents and Adults with Hereditary Angioedema	Ongoing
C307 CHAPTER-4	deucricitabant XR tablet prophylaxis open-label extension	A Phase 3, Long-term, Open-label Study of Orally Administered Deucricitabant Extended-release Tablet for Prophylaxis to Prevent Angioedema Attacks in Adolescents and Adults with Hereditary Angioedema	Ongoing

RAPIDe-1 Phase 2 On-Demand (C201)

In December 2022, we announced positive top-line data from RAPIDe-1, a Phase 2, double-blind, placebo-controlled, randomized, crossover, dose-ranging study of deucricitabant IR capsule for the on-demand treatment of HAE type 1 and type 2 (HAE-1/2) attacks. The study, initiated in February 2021, enrolled 74 patients across 13 countries who were randomized into one of three single dose levels of deucricitabant and placebo. The study compared symptom relief during HAE attacks and the safety of each dose of deucricitabant with placebo. In Part I of the study, participants in a non-attack state received the assigned single dose of deucricitabant IR capsule at the study center to assess its pharmacokinetics and safety. In Part II, participants self-administered blinded study drug at home to treat three physician-confirmed HAE attacks with deucricitabant or placebo.

The primary endpoint of the study is the change of a three-symptom composite (skin pain, skin swelling, abdominal pain) visual analogue scale (VAS-3) score from pre-treatment to four hours post-treatment, as captured electronically using numerically assisted input. The top-line data from 147 attacks collected by 62 participants show that all three dose levels of deucricitabant significantly reduce attack symptoms.

*VAS assessed every 30 minutes up to 4 hours post-treatment, then at 5, 6, 8, 24, 48 hours

Composite and individual VAS-3, mean symptom complex severity, or MSCS, and treatment outcome score, or TOS, were assessed up to 48-hours post-dose. All key secondary endpoints in the study were met, demonstrating that deucricitabant significantly shortens the time to onset of symptom relief by a $\geq 30\%$ reduction in VAS-3 score from the pre-treatment score, decreases time to a $\geq 50\%$ reduction in VAS-3 score from the pre-treatment score, reduces time to almost complete or complete symptom relief by VAS-3, reduces the MSCS score from pre-treatment to four hours post-treatment, and improves the TOS at four hours post-treatment. All other secondary endpoints were met. Participants on deucricitabant also used substantially less rescue medication compared to placebo.

	Placebo n=51	Deucricitabant 10 mg n=37	Deucricitabant 20 mg n=28	Deucricitabant 30 mg n=31	Combined deucricitabant* N=96
Time to onset of symptom relief by VAS-3 30% reduction[†]

P value		$P < 0.0001^{\S}$	$P < 0.0001$	$P < 0.0001$	

*The combined deucricitabant results are based on post-hoc analyses to provide a reference of the result by pooling all three active doses; [†]Hazard ratios and p-values are based on marginal Cox proportional hazards models; [‡]P values are based on mixed-effects models for repeated measures; [§]Nominal P value. Note: N = The number of attacks included in the mITT Analysis Set; P values for 20mg and 30mg are based on statistical tests in the pre-specified multiple comparison procedure, other p-values are nominal. LS mean, least-squares mean; MSCS, mean symptom complex severity; VAS, visual analog scale.

Deucricitabant was generally well tolerated with no treatment-related serious adverse events and no adverse events leading to treatment discontinuation. In the non-attack phase, two treatment-related adverse events were experienced by two patients; in the attack treatment phase, three treatment-related adverse events were reported for one attack treated with deucricitabant 30 mg (2.8%) and one treatment-related adverse event was reported for one attack treated with placebo (1.9%).

RAPIDe-2 Phase 2/3 On-Demand Long-Term Extension (C201)

Following treatment of participation in RAPIDe-1, participants were eligible to either join the Phase 2 randomized clinical trial of deucricitabant for the prevention of HAE attacks (CHAPTER-1) or roll over to the long-term extension on-demand study (RAPIDe-2). In Part A of RAPIDe-2, participants remained blinded to their dose of deucricitabant (10 mg, 20 mg, 30 mg) but were able to treat every attack with active study drug. In the extension study, participants were able to treat upper airway attacks, including laryngeal attacks. The primary endpoint of the study is to evaluate the long-term safety of deucricitabant as an on-demand agent; secondary endpoints of efficacy were measured using patient global impression of change (PGI-C) and patient global impression of severity (PGI-S) patient reported outcome (PRO) scales.

RAPIDe-2 includes 465 attacks from 19 participants, 14 of the attacks were upper airway attacks. Deucricitabant was well tolerated across all doses, with no treatment-related treatment-emergent adverse events (TEAEs), with no TEAEs leading to treatment discontinuation, study withdrawal, or death.

Secondary endpoints from the RAPIDe-2 study included time to onset of symptom relief as measured by a PGI-C rating of at least “a little better” for two consecutive timepoints (1.1 hours), time to substantial symptom relief as measured by a PGI-C rating of at least “better” for two consecutive timepoints (2.5 hours), time to reduction in attack severity as measured by at least one level reduction in PGI-S from pre-treatment for two consecutive endpoints (2.8 hours), and time to complete attack resolution as measured by a PGI-S rating of “none” (10.6 hours). In the upper airway attacks treated, there were similar times to relief and resolution of attacks as seen in the full data set. The majority of the attacks were treated with a single dose of deucricitabant and without rescue medication within 24 hours. The final results from Part A of the RAPIDe-2 extension were consistent with the Phase 2 RAPIDe-1 study and provide evidence on the long-term safety and efficacy of deucricitabant IR capsule for treatment of repeat HAE attacks.

The RAPIDe-2 study is still ongoing.

RAPIDe-3 Phase 3 Pivotal On-Demand (C306)

The RAPIDe-3 global Phase 3, placebo-controlled study evaluated orally administered deucricitabant immediate-release (IR) capsule (20 mg) for the on-demand treatment of attacks in people 12 years and older with HAE. The study enrolled a total of 134 participants from 24 countries on six continents. The patient population studied included adolescents and adults; participants on and not on long-term prophylaxis (LTP); people with HAE type 1, HAE type 2, and HAE with normal C1 inhibitor; and attacks studied included those of varying severities and across all body locations. The primary endpoint and all 11 secondary efficacy endpoints, assessed sequentially under a multiplicity-control procedure, achieved statistical significance.

*Adolescent participants receive a non-attack dose for PK sampling prior to randomization.

The efficacy analysis included paired attacks (one participant contributed one deucricitabant-treated attack and one placebo-treated attack) from 88 participants. Compared to placebo, deucricitabant demonstrated compelling and differentiating efficacy: the primary endpoint of time to symptom relief as measured by a PGI-C rating of at least “a little better” for two consecutive timepoints (1.28 hours vs. over 12 hours), time to End of Progression™ as measured by PGI-C (17.47 minutes vs. 228.67 minutes), time to substantial symptom relief as measured by a PGI-C rating of at least “better” for two consecutive timepoints (2.85 hours vs. over 12 hours), time to reduction in attack severity as measured by at least one level reduction in PGI-S from pre-treatment for two consecutive endpoints (2.41 hours vs. over 12 hours), and time to complete attack resolution as measured by a PGI-S rating of “none” (11.95 hours vs. over 48 hours). Additionally, most attacks were treated with a single capsule of deucricitabant.

In RAPIDe-3, deucricitabant was well tolerated with no treatment-related serious adverse events and no participants discontinuing treatment due to treatment-emergent adverse events.

Participants with ≥1 Treatment-Emergent Adverse Events (TEAEs) – n (%)	Placebo N=101	Deucricitbant N=100
Any TEAEs	17 (16.8)	24 (24.0)
Maximum Grade 1 (Mild)	10 (9.9)	13 (13.0)
Maximum Grade 2 (Moderate)	6 (5.9)	10 (10.0)
Maximum Grade 3 (Severe)	0	1 (1.0)
Maximum Grade 4 (Life-threatening)	1 (1.0)	0
Maximum Grade 5 (Fatal)	0	0
Study drug-related TEAEs	1 (1.0)	5 (5.0)
Treatment-emergent serious adverse events (TESAEs)	1 (1.0)	1 (1.0)
Study drug-related TESAEs	0	0
TEAEs leading to discontinuation	0	0

N: number of participants. n: number of participants with ≥1 event. % = n/N*100%

Pharvaris remains on track to submit a New Drug Application (NDA) with the U.S. Food and Drug Administration (FDA) in the first half of 2026 for the on-demand treatment of acute attacks of HAE.

CHAPTER-1 Phase 2 Prophylaxis (C301)

PHA022121-C301 is a double-blind, placebo-controlled Phase 2 study evaluating the efficacy as well as the safety and tolerability of deucricitbant for long-term prophylaxis against angioedema attacks in HAE-1/2. In the study, 34 participants were enrolled globally and randomized to receive one of two doses of deucricitbant (20 mg/day or 40 mg/day) or placebo for 12 weeks of treatment. Deucricitbant immediate-release capsule was dosed twice-a-day as a proof-of-concept for the once-daily deucricitbant extended-release tablet, which is the intended formulation for the prophylactic treatment of HAE. The open-label portion of the CHAPTER-1 study is ongoing at the 40 mg/day dose.

*20 mg/day = deucricitbant immediate-release (IR) capsules 10 mg twice daily; †40 mg/day = deucricitbant IR capsules 20 mg twice daily. b40 mg/day = deucricitbant IR capsules 20 mg twice daily.

	Placebo n=11	20 mg/day n=11	40 mg/day n=12	All N=34
Age in years – Mean	41.4	38.4	40.8	40.2
Sex: M/F – n	3/8	6/5	4/8	13/21
Race: White – n (%)	11 (100)	11 (100)	12 (100)	34 (100)
BMI (kg/m ²) – Mean	26.7	29.5	25.4	27.1
HAE Type – n				
Type 1	10	9	12	31
Type 2	1	2	0	3
Baseline HAE attack rate per month				
Mean	1.9	2.1	2.5	2.2
Median (Min, Max)	1.7 (0.7, 3.7)	1.7 (1.0, 5.3)	1.7 (1.0, 6.7)	1.7(0.7, 6.7)
Randomized baseline HAE attack rate categories – n (%)				
1 to < 2 attacks per 4 weeks	6 (54.5)	7 (63.6)	7 (58.3)	20 (58.8)
2 to < 3 attacks per 4 weeks	3 (27.3)	1 (9.1)	1 (8.3)	5 (14.7)
≥ 3 attacks per 4 weeks	2 (18.2)	3 (27.3)	4 (33.3)	9 (26.5)

The study's primary endpoint measured the time-normalized number of investigator-confirmed HAE attacks during the treatment period. The monthly attack rate was reduced by 84.5% (p=0.0008) compared to placebo in participants who received 40 mg/day deucricitbant. In the analysis of the secondary endpoints, deucricitbant demonstrated clinically meaningful improvement in the severity of attacks (92.3% reduction in occurrence of moderate and severe attacks) and a decrease in the number of attacks treated with on-demand

16 Table of Contents

medication (92.6% fewer attacks treated with on-demand medication). Participants on deucricitbant treatment also experienced a meaningful improvement in their quality of life.

*20 mg/day = deucricitbant immediate-release (IR) capsules 10 mg twice daily; †40 mg/day = deucricitbant IR capsules 20 mg twice daily.

Following the randomized portion of CHAPTER-1 (Part 1), participants were eligible to roll over to the open-label extension (OLE) of the study (Part 2), where they received deucricitbant 40 mg/day to evaluate the long-term safety and efficacy of deucricitbant administered for prophylaxis against HAE attacks. All 30 participants who completed CHAPTER-1 Part 1 enrolled in the ongoing OLE. Deucricitbant was well tolerated with no safety signals in the OLE. The mean treatment duration in the OLE was 22.2 months. Maximum deucricitbant exposure during the entire study was 33.8 months.

^b40 mg/day = deucricitbant IR capsules 20 mg twice daily. ^c20 mg/day = deucricitbant immediate-release (IR) capsules 10 mg twice daily;

The final data from the completed Phase 2 CHAPTER-1 OLE study provide further evidence on the long-term safety and efficacy of oral deucricitbant for prevention of HAE attacks. The attack rate was reduced by week 1 and remained low for up to ~34 months; the overall on-study attack rate during the OLE was 0.12 attacks/month.

^aBased on time normalized number of attacks per 4 weeks. ^b1 month = 4 weeks. ^cDeucricitbant IR capsule, 10 mg twice daily. ^dDeucricitbant IR capsule, 20 mg twice daily.

XR Phase 1 Data

In order to provide a differentiated product featuring more consistent exposure of deucricitbant for the prophylactic setting, we have developed an extended-release, or XR, formulation that features continuous slow release maintaining deucricitbant plasma concentrations above the levels we predict to provide protection against attacks. Deucricitbant has demonstrated properties favorable to the development of XR formulations, and we completed several human pharmacokinetics trials with deucricitbant to enable use of a to-be-marketed product candidate in the pivotal prophylactic trial CHAPTER-3. With the results of pharmacokinetic trials with the to-be-marketed XR formulation, we believe we have identified the to-be-marketed extended-release formulation of deucricitbant that enables once-daily dosing in a prophylactic setting.

Future Development Path

We intend to develop deucricitbant for bradykinin-mediated angioedema for the on-demand and prophylactic indications in parallel using two different product formulations.

On-Demand

The availability of an immediate-release capsule formulation provides a good pharmacokinetic profile for on-demand treatment: rapid oral absorption independent of fed status resulting in almost immediate onset of action with longer expected duration of efficacy than subcutaneous injections of icatibant. Based on the positive results of the RAPiDe-3 study, we are preparing marketing authorizations of deucricitbant for the on-demand treatment of HAE attacks. We also have an ongoing open-label extension study of deucricitbant for the on-demand treatment of HAE attacks.

We also intend to file an sNDA of deucricitbant for the on-demand treatment of AAE-C1INH attacks following completion of the second part of the CREAATE pivotal Phase 3 study.

Prophylaxis

Currently there is not a bradykinin B2 receptor antagonist available for HAE prophylaxis. Icatibant has a very short half-life and would require multiple injections each day, making it generally unsuitable for prophylactic use, especially as most people report injection site pain.

Based on the positive results of the primary analysis of CHAPTER-1, we have initiated the confirmatory global Phase 3 trial CHAPTER-3 for the efficacy and safety evaluation of deucricitbant, as described below, in prophylactic treatment of HAE. In December 2024, Pharvaris initiated a global, pivotal, randomized, double-blind, placebo-controlled Phase 3 study of orally administered deucricitbant extended-release tablet for the prophylaxis against angioedema attacks in adults and adolescents (12 years and older) with HAE. The study aims to enroll approximately 81 participants with HAE and randomize them in a 2:1 ratio to receive deucricitbant XR tablet (40 mg/day), which is the intended commercial dosage, or placebo, once daily for 24 weeks. The primary endpoint of the study is to evaluate the efficacy of deucricitbant compared to placebo for prophylaxis against angioedema attacks as measured by the time-normalized number

19 [Table of Contents](#)

of investigator-confirmed HAE attacks during the 24-week treatment period. Other objectives of the study include evaluating additional clinically relevant outcomes, deucricitibant's safety and tolerability, pharmacokinetics and its impact on health-related quality of life measures in the prophylactic setting.

In addition, we also are running an open-label extension study, CHAPTER-4, in the prophylactic setting which will include participants from the CHAPTER-1 open-label extension, participants who have completed the randomized Phase 3 study, CHAPTER-3, and novel participants to collect long-time safety and efficacy data.

Intellectual Property

We seek to protect and enhance the proprietary technologies, inventions, product candidates, methods of manufacture and methods of usage of our product candidates, and improvements thereof that are commercially important to the development of our business. We protect our proprietary intellectual property by, among other things, filing patent applications in the United States and internationally covering our proprietary technologies, inventions, product candidates, methods of manufacture and use, and improvements that are important to the development and implementation of our business. We will also seek to rely on regulatory protection afforded by orphan drug designations, inclusion in expedited development and review, data exclusivity, market exclusivity and patent term extensions where available.

As of December 31, 2025, we own five U.S. patents and 150 national/regional patents, including in Australia, China, India, Indonesia, Japan, Mexico, South Korea, France, Germany, Italy, Netherlands, Spain and United Kingdom, that expire on November 23, 2038 or later, and 85 pending patent applications worldwide, including 6 pending U.S. applications, 79 pending non-U.S. applications, including applications in China, Europe and Japan. The U.S. patents, 93 national/regional patents and 10 of our pending patent applications contain composition-of-matter claims to the deucricitibant small molecule and derivatives thereof; deucricitibant is the active pharmaceutical ingredient (API) in, and therefore extends our patents/patent applications to, our IR and XR product candidates. Each such patent application can generally be categorized into one of three patent families: (1) those relating to the novel bradykinin-B2-receptor antagonists, (2) those relating to the cyclic bradykinin-B2-receptor antagonists, and (3) those relating to the new cyclic bradykinin-B2-receptor antagonists. Two national/regional patents and 9 of our pending applications contain claims directed to the use of deucricitibant in on-demand treatment of HAE and in prophylaxis for HAE, and accordingly extend the patent applications to methods of use of the IR and XR product candidates. 53 granted patents, including in China, France, Germany, Italy, Netherlands, Spain and United Kingdom, and 18 of our pending patent applications, including an U.S. application, contain claims directed to the formulation of our IR product candidate. Two of our applications that are pending in the U.S. and Europe contain claims directed to the crystal form of the API. Two European patents and 46 pending national/regional patent applications are directly or indirectly directed to the formulation of our deucricitibant XR product candidate and its use in chronic or prophylactic treatment of HAE. Not accounting for any patent term adjustment, regulatory extension or terminal disclaimers, and assuming that all annuity and/or maintenance fees are paid timely, these patent applications, if granted, will not expire until November 24, 2038. We also rely upon trade secrets that may be important to the development of our business. Trade secrets are difficult to protect and provide us with only limited protection. There can be no assurance that any of our pending patent applications will issue or that we will benefit from any patent term extension or favorable adjustment to the term of any patents that may be issued in the future.

The term of individual patents depends upon the legal term for patents in the countries in which they are obtained. In most countries in which we have filed, including the U.S., the patent term is 20 years from the earliest filing date of a non-provisional patent application. In the U.S., a patent's term may be lengthened by patent term adjustment, which compensates a patentee for administrative delays by the USPTO in examining and granting a patent or may be shortened if a patent is terminally disclaimed over an earlier filed patent. The term of a patent that covers a drug or biological product may also be eligible for patent term extension when FDA approval is granted for a portion of the term effectively lost as a result of the FDA regulatory review period, subject to certain limitations and provided statutory and regulatory requirements are met.

Any such patent term extension can be for no more than five years, only one patent per approved product can be extended, the extension cannot extend the total patent term beyond 14 years from approval and only those claims covering the approved drug, a method for using it or a method for manufacturing it may be extended. We may not receive an extension if we fail to exercise due diligence during the testing phase or regulatory review process, fail to apply within applicable deadlines, fail to apply prior to expiration of relevant patents or otherwise fail to satisfy applicable requirements. Moreover, the length of the extension could be less than we request. In the future, if and when our product candidates receive approval from the FDA or foreign regulatory authorities, we expect to apply for patent term extensions on issued patents we may obtain in the future covering deucricitibant, depending upon the length of the clinical trials for each product and other factors.

As with other biotechnology and pharmaceutical companies, our ability to establish and maintain our proprietary and intellectual property position for our product candidates will depend on our success in obtaining effective patent claims and enforcing those claims if granted. There can be no assurance that any of our current or future patent applications will result in the issuance of patents or that our future issued patents (if any) will provide meaningful protection of our product candidates or technology. For more information regarding the risks related to our intellectual property, see "ITEM 3. KEY INFORMATION—D. Risk factors—Risks Related to Our Intellectual Property."

License Agreement

On March 31, 2016, we entered into a license agreement (the "BRAIN License"), and a research agreement with BRAIN to collaborate for the development of an orally available bradykinin B2 receptor antagonist. Pursuant to the BRAIN License, we acquired a worldwide, exclusive license from BRAIN to use (i) a certain proprietary substance class of bradykinin B2 receptor antagonists with the potential of oral activity ("OB2RA"), and (ii) any derivatives, improvements, analogs, isomers, metabolites, or conjugates therefrom (together, the "OB2RA Class"), in each case, for the purpose of developing, manufacturing and marketing compounds on a global basis from the OB2RA Class for the treatment of, among others, hereditary angioedema. Certain rights associated with deucricitbant, IR and XR are subject to the BRAIN License. In consideration for the license, we paid BRAIN a non-refundable up-front payment of approximately €0.3 million.

Under the BRAIN License, we are required to make one-time payments in an aggregate amount of up to €11.7 million upon the achievement of certain development, regulatory, and sales milestones. To date, we have paid an aggregate amount of approximately €3.7 million (approximately €0.3 million up-front plus €3.4 million in milestone payments). Under the BRAIN License, up to €8.0 million in aggregate potential milestone payments remain outstanding. In addition, we will be required to pay low to medium single-digit tiered royalties on direct or indirect net sales of licensed products. The royalties that we are required to pay under this agreement may be reduced on a country-by-country and product-by-product basis if sales of a generic version of a product account for 1% or more of the relevant market.

Our agreement with BRAIN will expire, on a product-by-product basis, upon (i) with respect to a royalty-bearing product, the expiry of the last valid claim of a royalty-bearing patent that claims such royalty-bearing product, and (ii) with respect to a licensed product that is not royalty-bearing, the expiry of the last valid claim of a non-royalty-bearing patent that claims such licensed product. Royalty-bearing patents comprise US Patent No. 10.836.748 and any patent or patent application that shares common priority with such patent. Each of deucricitbant, IR and XR is a royalty-bearing product. Not accounting for any regulatory extension or terminal disclaimers, and assuming that all annuity and/ or maintenance fees are paid timely, the applicable expiration date is November 23, 2038. Either party may terminate the agreement prematurely for cause, in particular, for the other party's (i) uncured material breach, (ii) bankruptcy or insolvency, or (iii) challenge to the validity or ownership of the intellectual property rights relating to the compounds that form the object of the collaboration with BRAIN. If BRAIN were to (a) terminate the BRAIN License for cause and (b) exercise contractual remedies available to it thereunder, then we could be required to grant to BRAIN an exclusive worldwide license to our intellectual property generated under the collaboration with BRAIN for use in all applications, including HAE. In addition, we could be prevented from competing with BRAIN until five years after the commercial launch of any product containing a compound from the OB2RA Class.

Manufacturing and Supply

We currently have two CDMOs for the production of deucricitbant active pharmaceutical ingredient (API). A robust and scalable synthetic route has been established. All raw materials can be purchased from multiple suppliers. We also partner with a leading CDMO for the manufacturing of the on-demand treatment product, deucricitbant IR capsules. Another well-established CDMO produces the prophylactic treatment product, deucricitbant XR tablets. A CDMO with a global footprint is responsible for packaging and worldwide distribution of Clinical Trial Material. We partnered with a further Commercial Packaging Organization (CPO) with a global footprint for the packaging and labeling of commercial finished drug product.

Sales and Marketing

The Pharvaris team, including its founders, have experience developing and commercializing drug products for rare diseases including HAE specifically. We intend to develop a fully integrated sales and marketing organization ahead of marketing approval for deucricitbant IR or deucricitbant XR. Even though HAE is a competitive market, orphan product companies have demonstrated successful first launches with excellent preparation and execution. We believe that our products will provide patients with significant new treatment options, and we will evaluate options to optimize the commercial opportunity.

Competition

The biotechnology industry is characterized by rapidly advancing technologies, intense competition and a strong emphasis on intellectual property. We face competition from different sources, including from academic centers as well as from a number of large and specialty biotechnology and pharmaceutical companies.

Currently, there are several approved therapies for HAE, including the following:

- **FIRAZYR:** The bradykinin BR2 receptor antagonist FIRAZYR (icatibant) is approved for the treatment of acute attacks and is administered by subcutaneous administration. Seven generic forms of icatibant have been approved in the U.S. since July 2019 and more may be approved in the future.
- **C1INH:** C1INH replacement therapy is available as an acute therapy (BERINERT, CINRYZE, and CETOR) and as a prophylactic therapy (HAEGARDA/BERINERT 2000/3000 and CINRYZE). These therapies are dosed subcutaneously and intravenously. Recombinant C1INH (RUCONEST) is also available as an acute therapy.
- **Kallikrein Inhibitors:** KALBITOR (ecallantide) is a specific recombinant plasma kallikrein inhibitor that is dosed subcutaneously to treat acute HAE attacks. TAKHZYRO (lanadelumab-flyo) is a monoclonal antibody approved for prophylaxis of HAE attacks and can be self-administered as a subcutaneous injection. ORLADEYO (berotralstat) is a kallikrein inhibitor that was approved is dosed orally once daily for the prevention of HAE attacks. DAWNZERA (donidalorsen) is an RNA targeted plasma kallikrein

21 [Table of Contents](#)

antisense oligonucleotide delivered subcutaneously either once or twice a month and was approved in the U.S. in the third quarter of 2025. EKTERLY (sebetralstat) is an oral kallikrein inhibitor that was approved for on-demand treatment of HAE attacks in the U.S. in the third quarter of 2025.

- *Anti-factor XIIa mAb*: ANDEMBRY (garadacimab) is an anti-factor XIIa mAb delivered subcutaneously once a month and approved in the U.S. in the second quarter of 2025.
- *Other Medications*: Prophylactic administration of synthetic attenuated androgens (generically available as danazol or stanozolol) has been utilized to reduce the frequency or severity of attacks. However, long-term use of danazol or stanozolol may result in liver damage, virilization and arterial hypertension. Six-month liver function tests, annual lipid profiles, and biennial hepatic ultrasound are recommended for patients on chronic androgen therapy.

We are also aware of a number of HAE therapies in clinical development: STAR-0215 from Astria, a long-lived monoclonal antibody inhibitor of plasma kallikrein dosed subcutaneously, a gene therapy – NTLA-2002 from Intellia, using CRISPR technology to knock out the gene for prekallikrein, and ARD-324 from ADARx, an siRNA in development for the prophylactic treatment of HAE.

Many of our competitors and potential competitors have substantially greater scientific, research and product development capabilities as well as greater financial, manufacturing, commercialization and human resources than we do. In addition, there is intense competition on the clinical trial sites and the enrollment of HAE patients for clinical trials. Many specialized biotechnology firms have formed collaborations with large, established companies to support the research, development and commercialization of products that may be competitive with ours, and many other biotech and pharmaceutical companies are competing for the same potential employees. Accordingly, our competitors may be more successful than we may be in developing, manufacturing, commercializing their products and in achieving widespread market acceptance.

Government regulation and product approval

In each country where we conduct our research and development, manufacture our products and intend to market our product candidates, if approved, we must comply with laws and regulations, including regulations issued by regulatory agencies and by other national or supra-national regulatory authorities, or collectively, the Competent Authorities, as well as industry standards, that govern nearly all aspects of our activities. Among others, the FDA, the EMA and the national Competent Authorities of each Member State of the European Union are the key regulatory agencies that exercise oversight over all aspects of our products.

Our pharmaceutical product candidates are subject to substantial requirements that govern, among other things, their research, development, testing, manufacturing, quality control, approval, safety, efficacy, labelling, storage, record keeping, commercialization, distribution, import and export, post-approval monitoring and reporting, advertising, promotion, reimbursement and pricing. The process of maintaining continued compliance with the regulatory requirements requires the expenditure of substantial amounts of time and money.

The nonclinical and clinical development paths for product candidates are broadly similar in the European Union and the United States.

Nonclinical Studies

Development of the product candidates starts with preclinical studies that enable the first-in-human clinical Phase I trial. The preclinical studies include tests for assessment of primary pharmacodynamics (the mode of action), secondary pharmacodynamics, safety pharmacology and general toxicity. Once in clinical development, additional nonclinical *in vivo* and *in vitro* studies are conducted until adequate proof of safety is established (e.g., animal testing for reproductive and general toxicity and carcinogenicity). The conduct of the nonclinical tests and formulation of the compounds for testing must comply with regulations and requirements set by the Competent Authorities, including compliance with GLP. Acceptance of the nonclinical study packages by regulatory agencies is necessary for the initiation and progression of the product candidate through Phase 1, Phase 2, and Phase 3 clinical trials.

Chemical and Pharmaceutical development

Chemical Development entails the development of the laboratory synthesis of the Drug Substance into a scalable process meeting the requirements of reproducibility, robustness, efficiency, and process safety, to manufacture the Drug Substance in high quality. Laboratory tests are conducted to develop a suitable formulation for clinical and commercial use. Pharmaceutical development includes the development of a formulation of the API, stability testing, and a robust Drug Product manufacturing process. The conduct of Chemical and Pharmaceutical development must comply with regulations and requirements set by the Competent Authorities, including compliance with cGMP.

Clinical Studies

Prior to obtaining approval to commercialize a drug candidate, sponsors typically must demonstrate with substantial evidence from well-controlled clinical trials, and to the satisfaction of the Competent Authorities, that such drug candidates are safe and effective for their intended uses. Clinical trials involve the administration of the investigational product to healthy volunteers or subjects under the supervision of a qualified investigator. Clinical trials must be conducted: (i) in compliance with the requirements of the Competent Authorities; (ii) in compliance with GCP, an international standard meant to protect the rights and health of subjects and to define the roles of clinical trial sponsors, administrators, and monitors; as well as (iii) under protocols detailing the objectives of the trial, the parameters to be used in

22[Table of Contents](#)

monitoring safety, and the effectiveness criteria to be evaluated. The number of clinical studies and trials that will be required for approval varies depending on, e.g., the drug candidate and the disease or condition that the drug candidate is designed to address.

Prior to initiating clinical trials, a request for clinical trial authorization (national Competent Authorities in the European Union) or an IND application in the United States must be submitted to the relevant Competent Authorities. These submissions must be supported by an investigational medicinal product dossier or equivalent as detailed in applicable regulations and guidance documents from the Competent Authorities. Extensive information about the proposed clinical studies, as well as the results of the nonclinical tests, together with manufacturing information and analytical data, are included in these submissions. In the United States, a 30-day waiting period after the submission of an IND is required prior to the commencement of clinical testing in humans. If the FDA has neither commented on nor questioned the IND within this 30-day period, the clinical trial proposed in the IND may begin.

Manufacturing of investigational products is subject to authorization and must be carried out in accordance with cGMP. Furthermore, a clinical trial may only be started after an IRB (United States) or a competent Ethics Committee (European Union) has issued a favorable opinion on the clinical trial application.

During all phases of clinical development, Competent Authorities require extensive monitoring and auditing of all clinical activities, clinical data and clinical trial investigators. Annual progress reports detailing the progress of the clinical trials must be submitted to the Competent Authorities. Important new safety information, that suggests a significant risk for human patients, or any clinically important increase in the rate of a serious suspected adverse reaction over that listed in the protocol or investigator brochure, must also be provided to clinical investigators.

The Competent Authorities, sponsor or its data safety monitoring board may suspend or terminate a clinical trial at any time on various grounds, including a finding that the research exposes patients to an unacceptable health risk. Similarly, an IRB or Ethics Committee can suspend or terminate approval of a clinical trial at its institution if the clinical trial is not being conducted in accordance with the institutional requirements or if the drug candidate has been associated with unexpected serious harm to patients.

The following section describes specific regulatory regimes and regulations applicable in certain jurisdictions.

United States

U.S. Food and Drug Administration

In the United States, the FDA regulates drugs under the Federal Food, Drug, and Cosmetic Act, or FDCA, and implementing regulations. These laws, govern, among other things, the research, development, testing, manufacture, storage, recordkeeping, approval, labeling, promotion and marketing, distribution, post-marketing monitoring and reporting, sampling, and import and export of drug products. The process of obtaining regulatory approvals and the subsequent compliance with the many statutory and regulatory provisions require the expenditure of substantial time and financial resources. Failure to comply with applicable U.S. requirements may subject a company to a variety of administrative or judicial sanctions, such as clinical hold, FDA refusal to approve pending regulatory applications, warning or untitled letters, product recalls, product seizures, total or partial suspension of production or distribution, injunctions, fines, civil penalties, and criminal prosecution.

The FDA Approval Process

Clinical trials to support NDAs for marketing approval are typically conducted in three sequential phases, but the phases may overlap. In Phase 1, the initial introduction of the product candidate is usually into healthy human subjects, and the product candidate is tested to assess metabolism, pharmacokinetics, pharmacological actions, side effects associated with increasing doses, and, if possible, early evidence on effectiveness. Phase 2 usually involves trials in a limited patient population to determine the effectiveness of the product candidate for a particular indication, dosage tolerance, and optimal dosage, and to identify common adverse effects and safety risks. If a product candidate demonstrates evidence of effectiveness and an acceptable safety profile in Phase 2 evaluations, Phase 3 trials are undertaken to obtain additional information about clinical efficacy and safety in a larger number of subjects, typically at geographically dispersed clinical trial sites, to permit the FDA to evaluate the overall benefit-risk relationship of the product candidate and to provide adequate information for the labeling of the product candidate. In most cases, the FDA requires two adequate and well-controlled Phase 3 clinical trials to demonstrate the efficacy of the product candidate. A single Phase 3 trial may be sufficient in certain circumstances.

During the development of a new product candidate, sponsors are given opportunities to meet with the FDA at certain points; specifically, prior to the submission of an IND, at the end of Phase 2 and before an NDA is submitted. Meetings at other times may be requested. These meetings can provide an opportunity for the sponsor to share information about the data gathered to date and for the FDA to provide advice on the next phase of development. Sponsors typically use the meeting at the end of Phase 2 to discuss their Phase 2 clinical results and present their plans for the pivotal Phase 3 clinical trials that they believe will support the approval of the new product candidate.

The results of drug candidate development, nonclinical testing, clinical trials and proposed labeling are submitted to the FDA as part of the NDA. An NDA must include all information regarding and data from pertinent nonclinical and clinical studies, including negative or ambiguous results as well as positive findings, together with detailed information relating to the drug's chemistry, manufacturing and controls. The FDA will accept, as support for an IND or NDA a well-designed, well-conducted, non-IND foreign clinical trial if it was conducted in accordance with GCP and the FDA is able to validate the data from the trial through an on-site inspection, if necessary. Regulatory applications based solely on foreign clinical data meeting these criteria may be approved if the foreign data are applicable to the U.S. population and U.S. medical practice, the trials have been performed by clinical investigators of recognized competence, and the

23 [Table of Contents](#)

data may be considered valid without the need for an on-site inspection by FDA or, if FDA considers such an inspection to be necessary, FDA is able to validate the data through an on-site inspection or other appropriate means. Failure of an application to meet any of these criteria may result in the application not being approvable based on the foreign data alone. To support marketing approval and authorization, the data submitted must be sufficient in quality and quantity to establish the safety and effectiveness of the investigational drug to the FDA's satisfaction.

The cost of preparing and submitting an NDA is substantial. The submission of most NDAs is additionally subject to a substantial application user fee payment to the FDA, and the manufacturer and/or sponsor under an approved NDA are also subject to certain annual program user fees. The FDA typically increases these fees annually.

The FDA has 60 days from its receipt of an NDA to determine whether it will accept the application for filing based on the agency's threshold determination that the application is sufficiently complete to permit substantive review. The FDA may refuse to file any NDA that it deems incomplete or not properly reviewable at the time of submission and may request additional information. In this event, the NDA must be resubmitted with the additional information and the resubmitted application also is subject to review before the FDA accepts it for filing. Once the FDA accepts the filing, the FDA begins an in-depth review. The FDA has agreed to certain performance goals in the review of NDAs. Under the Prescription Drug User Fee Act, the FDA has a goal of responding to standard review NDAs within ten months from the 60-day filing date. The review process may be extended by the FDA for three additional months to consider certain late-submitted information, or information intended to clarify information already provided in the submission. This late-submitted information is typically requested by the FDA.

The FDA may also refer applications for novel drugs or product candidates that present difficult questions of safety or efficacy, to an FDA Advisory Committee. An Advisory Committee is an outside panel that typically includes clinicians and other experts in the field that will review and evaluate the questions posed by the FDA, and provide recommendations, sometimes including whether the FDA should approve the application. The FDA is not bound by the recommendation of an Advisory Committee, but it generally follows such recommendations.

Before approving an NDA, the FDA will typically inspect one or more clinical study sites to assure compliance with GCP. The FDA may also inspect one or more nonclinical study sites. In addition, the FDA will inspect the facility or the facilities involved in the manufacture of the drug to determine if the facilities, processes and quality are compliant with cGMP. The FDA will not approve an NDA unless compliance with cGMP is satisfactory.

After the FDA evaluates the NDA and the manufacturing facilities, it issues either an approval letter or a complete response letter. A complete response letter indicates that the FDA has completed its review of the NDA, and the agency has determined that it will not approve the application in its present form. A complete response letter generally outlines the deficiencies in the NDA, which may be minor or substantial, and may delineate the requirements needed to successfully progress the NDA to approval. This may require substantial additional clinical data and/or other significant, expensive, and time-consuming requirements related to clinical studies, nonclinical studies and/or manufacturing. If a complete response letter is issued, the applicant may either resubmit the NDA, addressing the deficiencies identified in the letter, or withdraw the application. The FDA has committed to reviewing resubmissions of the NDA addressing such deficiencies in two or six months, depending on the type of information included. Even if such data is submitted, the FDA may ultimately decide that the NDA does not satisfy the criteria for approval.

An approval letter authorizes commercial marketing of the drug, with specific prescribing information for specific indications. Even if FDA approves the NDA, the approval may be significantly limited to specific indications and dosages or the indications for use may otherwise be limited, which could restrict the commercial value of the product. Further, the FDA may require that certain contraindications, warnings or precautions be included in the product labeling. The FDA may impose restrictions and conditions on product distribution, prescribing, or dispensing in the form of a risk evaluation and mitigation strategy, or REMS, or otherwise limit the scope of any approval. REMS can include medication guides, communication plans for healthcare professionals, and elements to assure safe use, or ETASU. ETASU can include, but is not limited to, special training or certification for prescribing or dispensing, dispensing only under certain circumstances, special monitoring, and the use of patient registries. The requirement for a REMS can materially affect the potential market and profitability of the product. In addition, the FDA may require confirmatory post-marketing trials, sometimes referred to as "Phase 4" clinical trials, designed to further assess a product's safety and effectiveness, and testing and surveillance programs to monitor the safety of approved products that have been commercialized.

Expedited Approval in the U.S.

The FDA has a number of programs that are intended to facilitate and expedite development and review of new drugs to address unmet medical need in the treatment of a serious or life-threatening condition. These are: Fast Track Designation, Breakthrough Therapy Designation, Accelerated Approval and Priority Review Designation.

Fast Track Designation can be requested early in the development process, if evidence of activity in a nonclinical model, a mechanistic rationale or pharmacologic data demonstrates the potential to address an unmet medical need. In the later stages of development, available clinical data should demonstrate the potential to address an unmet medical need. Fast Track Designation provides opportunities for applicants to have frequent interactions with the relevant FDA review teams. In addition, a fast-track product can be eligible for priority review if supported by clinical data at the time of NDA submission. If the FDA determines that a fast-track product may be effective after preliminary evaluation of the NDA, it may consider reviewing portions of a marketing application before the sponsor submits the complete application. Fast Track Designation can be requested after the IND is first submitted but before receiving approval of the NDA. As a practical matter, the FDA should ordinarily receive a Fast Track Designation request no later than the sponsor's pre-NDA

24[Table of Contents](#)

meeting with the agency because many of the features of Fast Track Designation will not apply after that time. The FDA will respond to Fast Track Designation requests within 60 calendar days of receipt of the request.

The FDA's Breakthrough Therapy Designation is intended to expedite the development and review of drugs which may demonstrate substantial improvement over available therapies on one or more clinically significant endpoints, such as substantial treatment effects observed early in clinical development. A drug that receives Breakthrough Therapy Designation is eligible for all Fast Track Designation features, intensive guidance from FDA on an efficient drug development program, beginning as early as Phase 1, and organizational commitment involving senior managers. Breakthrough Therapy Designation is requested by the manufacturer. A sponsor needs to submit a request to the agency for Breakthrough Therapy Designation, but in some cases the FDA may suggest that the sponsor consider submitting a request after reviewing submitted data and information (including preliminary clinical evidence), the FDA thinks the drug development program may meet the criteria for Breakthrough Therapy Designation; and the remaining drug development program can benefit from the designation. Ideally, a Breakthrough Therapy Designation request should be received by the FDA no later than the End-of-Phase 2 meetings if any of the features of the designation are to be obtained. The FDA will respond to Breakthrough Therapy Designation requests within 60 days of receipt of the request.

Accelerated approval may be granted for a product based upon a determination that the product has an effect on a surrogate endpoint that is reasonably likely to predict clinical benefit, or on a clinical endpoint that can be measured earlier than irreversible morbidity or mortality, or IMM, that is reasonably likely to predict an effect on IMM or other clinical benefit, taking into account the severity, rarity or prevalence of the condition and the availability or lack of alternative treatments. For drugs granted accelerated approval, post-marketing confirmatory trials will be required to verify and describe the anticipated effect on the IMM or other clinical benefit. The accelerated approval pathway has been used primarily in settings in which the disease course is long, and an extended period of time would be required to measure the intended clinical benefit of a drug. Accelerated approval is also potentially useful in acute disease settings where the intended clinical benefit can be demonstrated only in a very large study because the clinical event that would need to be evaluated to demonstrate clinical benefit occurs rarely.

The FDA may withdraw approval of a drug or indication approved under the accelerated approval pathway if e.g., the confirmatory trial fails to verify the predicted clinical benefit, the evidence demonstrates that the product is not shown to be safe and effective under the conditions of use, the applicant fails to conduct the post-approval trials with due diligence or the applicant disseminates false or misleading promotional materials related to the product.

A priority review designation is intended to direct overall attention and resources to the evaluation of an application for a drug that treats, prevents or is used in the diagnosis of a serious condition and if approved would provide a significant improvement in safety or effectiveness. Eligibility for priority review is determined by the FDA at the time of an NDA or efficacy supplement filing. Where an application receives a priority review designation, the FDA's goal is to take action on the marketing application within six months from the 60-day filing date (as compared to within 10 months under standard review). The FDA determines whether an application qualifies for priority review (versus standard review) for every application it reviews, not just when priority review is requested by the applicant. However, an applicant may expressly request priority review. The FDA will inform the applicant in writing of a priority review designation by day 60 of the review.

Orphan Designation

An orphan drug designation qualifies the manufacturer for certain tax credits and may lead to market exclusivity for seven years following the date of the drug's approval by the FDA. The FDA provides that a drug shall be designated as an orphan drug if its manufacturer can establish that the drug is for a condition that affects fewer than 200,000 individuals in the United States or when there is no reasonable expectation that the cost of developing and making available the drug for the disease or condition will be recovered from sales of the drug in the United States. More than one manufacturer may receive orphan drug designation for the same drug for the same rare disease or condition, but each manufacturer seeking orphan drug designation must file a complete request for designation.

In the United States, a manufacturer may request orphan drug designation of a previously unapproved drug or new orphan indication for a different use for an already marketed drug. In addition, a manufacturer of a drug that is otherwise the same drug as an already approved orphan drug may seek and obtain orphan drug designation for the subsequent drug for the same rare disease or condition if it can present a plausible hypothesis that its drug may be clinically superior to the first drug. FDA may grant the drug orphan exclusivity upon approval, if clinical superiority is demonstrated. Orphan drug exclusivity cannot otherwise be granted for the same drug made by another manufacturer for the same indication during the market exclusivity period unless the original manufacturer consents or the original manufacturer is unable to ensure the availability of sufficient quantities of the drug to meet the needs of persons with the disease or condition for which the drug was designated.

An application for orphan drug designation can be made any time prior to the filing of an application for approval to market the product. The period of orphan exclusivity, if granted, begins on the date that the marketing application is approved. The exclusivity is limited to the indication for which the drug has been approved.

Post-Marketing Requirements

FDA may withdraw approval of an NDA if compliance with regulatory requirements is not maintained or if problems occur after the product reaches the market. Later discovery of previously unknown problems with a product may result in restrictions on the product, product recalls or even complete withdrawal of the product from the market.

25 [Table of Contents](#)

After approval, some types of changes to the approved product, such as adding new indications, manufacturing changes and additional labeling claims, are subject to further FDA review and approval; such changes may require the approval of a new NDA or an NDA supplement. An NDA supplement for a new indication typically requires clinical data similar to that in the original application, and the FDA uses the same procedures and actions in reviewing NDA supplements as it does in reviewing new NDAs. As with new NDAs, the FDA often significantly extends the review process with requests for additional information or clarification. In addition, the FDA may, under some circumstances, require testing and surveillance programs to monitor the effect of approved products that have been commercialized, and the FDA under some circumstances has the power to prevent or limit further commercialization of a product based on the results of these post-marketing programs.

In addition, drug products manufactured or distributed pursuant to the FDA approvals, are subject to additional and continuing regulation by the FDA, including, among other things:

- record-keeping requirements;
- reporting of adverse experiences associated with the product;
- providing the FDA with updated safety and efficacy information;
- distribution of drug samples;
- notifying the FDA and gaining its approval of specified manufacturing or labeling changes;
- drug establishment registration and drug listing requirements; and
- complying with FDA promotion and advertising requirements, which include, among other things, standards for direct-to-consumer advertising, restrictions on promoting products for uses or in patient populations that are not described in the product's approved labeling, limitations on industry-sponsored scientific and educational activities and requirements for promotional activities involving the internet.

Drug manufacturers are subject to periodic unannounced inspections by the FDA and certain state agencies for compliance with cGMP requirements and other laws. There are strict regulations regarding changes to the manufacturing process, and, depending on the significance of the change, it may require prior FDA approval before it can be implemented. FDA regulations also require investigation and correction of any deviations from cGMP and impose reporting and documentation requirements upon drug manufacturers. Drug manufacturers must also satisfy the product tracing, verification and reporting requirements in the Drug Quality and Security Act and have procedures in place to identify and properly handle suspect and illegitimate products. Accordingly, manufacturers must continue to spend time, money and effort in the area of production, distribution and quality control to maintain compliance with cGMP and other aspects of regulatory compliance.

Sponsors of clinical trials of FDA-regulated products are required to register and disclose certain clinical trial information. Information related to the product, patient population, phase of investigation, trial sites and investigators, and other aspects of the clinical trial is then made public as part of the registration. Sponsors are also obligated to disclose the results of their clinical trials after completion. Disclosure of the results of these trials can be delayed in certain circumstances for up to two years after the date of completion of the trial. Competitors may use this publicly available information to gain knowledge regarding the progress of development programs.

Although rare, the FDA may withdraw approval of an NDA if a company does not comply with its extensive regulatory requirements or if significant safety, efficacy or manufacturing issues arise after the drug reaches the market. More typically, if a company or the FDA discovers previously unknown problems with a drug, including adverse events of unanticipated severity or frequency or issues with manufacturing processes, the FDA may revise the approved labeling to add new safety information; require additional clinical studies to assess new safety risks; or impose distribution or other restrictions under a REMS program. Other potential consequences may include:

- restrictions on the commercialization or manufacturing of the drug, market withdrawals or recalls;
- fines, warning letters or holds on post-approval clinical studies;
- the FDA refusal to approve pending NDAs or supplements to approved NDAs;
- drug seizure or detention, or refusal to permit the import or export of drugs; or
- injunctions or the imposition of civil or criminal penalties.

From time to time, legislation is drafted, introduced and passed in Congress that could significantly change the statutory provisions governing the testing, approval, manufacturing and marketing of products regulated by the FDA. In addition to new legislation, FDA regulations and policies are often revised or interpreted by the agency in ways that may significantly affect our business and product candidates. It is impossible to predict whether further legislative changes will be enacted or whether FDA regulations, guidance, policies or interpretations will be changed or what the effect of such changes, if any, may be.

U.S. Patent Term Restoration

A patent claiming a new product may be eligible for a limited patent term extension under the Hatch-Waxman Act, which permits a patent restoration of up to five years for patent term lost during product development and FDA regulatory review. The restoration period granted on a patent covering a product is typically one-half the time between the effective date of a clinical investigation involving human beings is begun and the submission date of an application, plus the time between the submission date of an application and the ultimate

approval date. Patent term restoration cannot be used to extend the remaining term of a patent past a total of 14 years from the product's approval date. Only one patent applicable to an approved product and only those claims covering the approved drug, a method for using it, or a method for manufacturing it may be extended. In addition, the application for the extension must be submitted prior to the expiration of the patent in question. A patent that covers multiple products for which approval is sought can only be extended in connection with one of the approvals. The USPTO reviews and approves the application for any patent term extension or restoration in consultation with the FDA.

Other U.S. Healthcare Laws and Compliance Requirements

In the United States, our activities are potentially subject to regulation by various federal, state and local authorities in addition to the FDA, including but not limited to, the Centers for Medicare and Medicaid Services, or CMS, other divisions of the U.S. Department of Health and Human Services (e.g., the Office of Inspector General), the U.S. Department of Justice, or DOJ, and individual U.S. Attorney offices within the DOJ, and state and local governments. For example, sales, marketing and scientific/educational grant programs are subject to anti-fraud and abuse provisions of the Social Security Act, the false claims laws, the privacy provisions of HIPAA, transparency reporting laws, and similar state laws, each as amended. Healthcare providers and third-party payors play a primary role in the recommendation and prescription of drug products that are granted marketing approval. Arrangements with providers, consultants, third-party payors and customers are subject to these broadly applicable healthcare laws and regulations that may constrain our business and/or financial arrangements.

The applicable federal and state healthcare laws and regulations, include, without limitation, the following:

- ***The Federal Anti-Kickback Statute*** – An intent-based federal criminal statute that prohibits, among other things, any person or entity, from knowingly and willfully offering, paying, soliciting or receiving any remuneration, directly or indirectly, overtly or covertly, in cash or in kind, to induce or reward, or in return for, either the referral of an individual for, or the purchase, lease, order, recommendation, or arranging of, any item or service for which payment may be made, in whole or in part, by a federal health care program such as Medicare or Medicaid. The term “remuneration” has been interpreted broadly to include anything of value, including, without limitation, any kickback, bribe, or certain rebates. The Patient Protection and Affordable Care Act, as amended by the Health Care and Education Reconciliation Act (“the PPACA”), among other things, amended the intent requirement of the federal Anti-Kickback Statute to clarify that a person or entity need not have actual knowledge of this statute or specific intent to violate it. The Anti-Kickback Statute applies to arrangements between pharmaceutical manufacturers on the one hand and individuals, such as prescribers, patients, purchasers, and formulary managers on the other hand, including, for example, consulting/speaking arrangements, discount and rebate offers, grants, charitable contributions, and patient support offerings, among others. A conviction for violation of the Anti-Kickback Statute can result in criminal fines and/or imprisonment and requires mandatory exclusion from participation in federal health care programs (such as Medicare and Medicaid). Exclusion may also be imposed if the government determines that an entity has committed acts that are prohibited by the Anti-Kickback Statute. Although there are a number of statutory exceptions and regulatory safe harbors to the federal Anti-Kickback Statute that protect certain common industry activities from prosecution, the exceptions and safe harbors are drawn narrowly and arrangements may be subject to scrutiny or penalty if they do not fully satisfy all elements of an available exception of safe harbor. The Anti-Kickback Statute safe harbors are the subject of possible regulatory reforms. Any changes to the safe harbors may impact our future contractual and other arrangements with pharmacy benefit managers, group purchasing organizations, third-party payors, wholesalers and distributors, healthcare providers and prescribers, and other entities, as well as our future pricing strategies.
- ***The Federal Civil False Claims Act***—Imposes civil penalties, including through civil whistleblower or *qui tam* actions, against individuals or entities for, among other things, knowingly presenting, or causing to be presented, false or fraudulent claims for payment to a federal health care program or knowingly making using or causing to be made or used a false statement or record material to payment of a false claim or avoiding, decreasing or concealing an obligation to pay money to the federal government, with potential liability including mandatory treble damages and significant per-claim penalties, currently set at \$11,665 to \$22,331 per false claim or statement for penalties assessed after June 19, 2020, with respect to violations occurring after November 2, 2015. Pharmaceutical companies have been investigated and/or subject to government enforcement actions asserting liability under the federal civil False Claims Act in connection with their alleged off-label promotion of drugs, purportedly concealing price concessions in the pricing information submitted to the government for government price reporting purposes (e.g., under the Medicaid Drug Rebate Program), and allegedly providing free product to customers with the expectation that the customers would bill federal health care programs for the product. In addition, the government may assert that a claim including items or services resulting from a violation of the federal Anti-Kickback Statute constitutes a false or fraudulent claim for purposes of the federal False Claims Act. As a result of a modification made by the Fraud Enforcement and Recovery Act of 2009, a claim includes “any request or demand” for money or property presented to the U.S. government. In addition, manufacturers can be held liable under the federal False Claims Act even when they do not submit claims directly to government payors if they are deemed to “cause” the submission of false or fraudulent claims. There is also the Federal Criminal False Claims Act, which is similar to the Federal Civil False Claims Act and imposes criminal liability on those that make or present a false, fictitious or fraudulent claim to the federal government.
- ***The Federal Criminal Statute on False Statements Relating to Health Care Matters***—Makes it a crime to knowingly and willfully falsify, conceal, or cover up a material fact, make any materially false, fictitious, or fraudulent statements or representations, or make or use any materially false writing or document knowing the same to contain any materially false, fictitious, or fraudulent statement or entry in connection with the delivery of or payment for healthcare benefits, items, or services.
- ***Criminal Health Care Fraud Statute***—Enacted as part of the HIPAA, makes it a crime to knowingly and willfully execute, or attempt to execute, a scheme or artifice to defraud any health care benefit program or to obtain, by means of false or fraudulent

pretenses, representations or promises, any money or property owned by, or under the control or custody of, any healthcare benefit program in connection with the delivery of or payment for healthcare benefits, items or services.

- **The Federal Civil Monetary Penalties Law**—Authorizes the imposition of substantial civil monetary penalties against an entity, such as a pharmaceutical manufacturer, that engages in activities including, among others (1) knowingly presenting, or causing to be presented, a claim for services not provided as claimed or that is otherwise false or fraudulent in any way; (2) arranging for or contracting with an individual or entity that is excluded from participation in federal health care programs to provide items or services reimbursable by a federal health care program; (3) violations of the federal Anti-Kickback Statute; or (4) failing to report and return a known overpayment.
- **HIPAA Health Information Privacy and Security**—HIPAA, as amended by the Health Information Technology for Economic and Clinical Health Act of 2009 ("HITECH"), imposes privacy, security, and breach reporting obligations on certain covered entity healthcare providers, health plans, and healthcare clearinghouse as well as their business associates that perform certain services involving the use or disclosure of individually identifiable health information (referred to as "protected health information" under the law), including, among other requirements, mandatory contractual terms and technical safeguards to protect the privacy, security and transmission of individually identifiable health information, and require notification to affected individuals and regulatory authorities of certain breaches of security of individually identifiable health information. HITECH also created new tiers of civil monetary penalties, amended HIPAA to make civil and criminal penalties directly applicable to business associates, and gave state attorneys general new authority to file civil actions for damages or injunctions in U.S. federal courts to enforce the federal HIPAA laws and seek attorneys' fees and costs associated with pursuing federal civil actions. In addition, state laws govern the privacy and security of health information in specified circumstances, many of which differ from each other in significant ways and may not have the same effect, thus complicating compliance efforts.
- **The Federal Physician Payments Sunshine Act**—Requires "applicable manufacturers" of drugs, devices, biologics, and medical supplies for which payment is available under Medicare, Medicaid or the State Children's Health Insurance Program, among others, to track and report annually to the federal government (for disclosure to the public) certain payments and other transfers of value they make to "covered recipients." The term covered recipients includes U.S.-licensed physicians, teaching hospitals, and, for reports submitted on or after January 1, 2022, physician assistants, nurse practitioners, clinical nurse specialists, certified nurse anesthetists, and certified nurse midwives. Failure to submit required information may result in civil monetary penalties.
- **Analogous State Laws**—There are state law equivalents of the above federal laws, such as the Anti-Kickback Statute and the False Claims Act, which may apply to items and services reimbursed by any third-party payor, including commercial insurers (i.e., so-called "all-payor anti-kickback laws").
- **State Laws Regulating Pharmaceutical Manufacturer Compliance Programs, Drug Price Transparency, and Other Practices**—Some state laws require pharmaceutical companies to implement compliance programs, comply with the pharmaceutical industry's voluntary compliance guidelines and the relevant compliance guidance promulgated by the federal government, or to track and report gifts, compensation, or other remuneration to physicians and other healthcare providers. Several U.S. states and localities have enacted legislation requiring pharmaceutical companies to establish marketing compliance programs, file periodic reports, and/or make periodic public disclosures on sales, marketing, pricing, clinical trials, and other activities. Other state laws prohibit certain marketing-related activities including the provision of gifts, meals or other items to certain healthcare providers, and restrict the ability of manufacturers to offer co-pay support to patients for certain prescription drugs. In addition, several recently passed state laws require disclosures related to state agencies and/or commercial purchasers with respect to certain price increases that exceed a certain level as identified in the relevant statutes. Some of these laws and regulations contain ambiguous requirements that government officials have not yet clarified. Given the lack of clarity in the laws and their implementation, our reporting actions could be subject to the penalty provisions of the pertinent federal and state laws and regulations.
- We are also required to satisfy the product tracing, verification and reporting requirements set out in the Drug Quality and Security Act.

We expect that one or more of our products, if approved, may be eligible for coverage under Medicare, the federal health care program that provides health care benefits to the aged and disabled, including coverage for outpatient services and supplies, such as certain drug products, that are medically necessary to treat a beneficiary's health condition. In addition, one or more of our products, if approved, may be covered and reimbursed under other federal health care programs, such as Medicaid and the 340B Drug Pricing Program. The Medicaid Drug Rebate Program requires pharmaceutical manufacturers to enter into and have in effect a national rebate agreement with the Secretary of the Department of Health and Human Services and pay quarterly rebates based on utilization of the manufacturer's drugs under the program as a condition for states to receive federal matching funds for the manufacturer's outpatient drugs furnished to Medicaid patients. Under the 340B Drug Pricing Program, the manufacturer must extend discounts to entities that participate in the program. As part of the requirements to participate in these government programs, many pharmaceutical manufacturers must calculate and report certain price reporting metrics to the government, such as average manufacturer price and best price.

Efforts to ensure that our business arrangements with third parties will comply with applicable healthcare laws and regulations will involve substantial costs. It is possible that governmental authorities will conclude that our business practices may not comply with current or future statutes, regulations, guidance, case law or other applicable law. If our operations are found to be in violation of any of these laws or any other governmental regulations that may apply to us, we may be subject to significant civil, criminal and administrative penalties, damages, fines, individual imprisonment, exclusion from participation in federal health care programs, such as Medicare and Medicaid, disgorgement, reputational harm, additional oversight and reporting obligations pursuant to a corporate integrity agreement or similar agreement to resolve allegations of non-compliance with applicable laws and regulations, and the curtailment or restructuring of our operations, any of which could adversely affect our ability to market our products, if approved, and adversely impact our financial results.

28 [Table of Contents](#)

Although effective compliance programs can mitigate the risk of investigation and prosecution for violations of these laws and regulations, these risks cannot be entirely eliminated. Any action against us for an alleged or suspected violation could cause us to incur significant legal expenses and could divert our management's attention from the operation of our business, even if our defense is successful. If any of the physicians or other healthcare providers or entities with whom we expect to do business is found not to be in compliance with applicable laws, it may be costly to us in terms of money, time and resources, and they may be subject to criminal, civil or administrative sanctions, including exclusions from government-funded healthcare programs.

U.S. Healthcare Reform

In the United States, there have been and continue to be a number of legislative and regulatory changes and proposed changes regarding the healthcare system that could prevent or delay marketing approval of our product candidates, restrict or regulate post-approval activities and affect our ability, or the ability of our future collaborators, to effectively sell any drugs for which we, or they, obtain marketing approval. We expect that current laws, as well as other healthcare reform measures that may be adopted in the future, may result in more rigorous coverage criteria and additional downward pressure on the price that we, or our future collaborators, may receive for any approved drugs. For example, the PPACA substantially changed and continues to impact healthcare financing and delivery by both government payors and private insurers. Among the PPACA provisions of importance to the pharmaceutical industry, in addition to those otherwise described above, are the following:

- an annual, nondeductible fee on any entity that manufactures or imports certain branded prescription drugs and biologic agents, apportioned among these entities according to their market share in certain government healthcare programs;
- an increase in the statutory minimum rebates a manufacturer must pay under the Medicaid Drug Rebate Program to 23.1% and 13.0% of the average manufacturer price for branded and generic drugs, respectively;
- expansion of healthcare fraud and abuse laws, including the False Claims Act and the Anti-Kickback Statute, which include, among other things, new government investigative powers and enhanced penalties for non-compliance;
- establishment of the Medicare Part D coverage gap discount program that, as a condition for the manufacturers' outpatient drugs to be covered under Medicare Part D, requires manufacturers to provide a now 70% point-of-sale discount off the negotiated price of applicable brand drugs to eligible beneficiaries during their coverage gap period;
- expansion of eligibility criteria for Medicaid programs by, among other things, allowing states to offer Medicaid coverage to additional individuals, thereby potentially increasing manufacturers' Medicaid rebate liability;
- expansion of the types of entities eligible for discounts under the Public Health Service pharmaceutical pricing program (*i.e.*, the 340B program);
- reporting of certain financial arrangements between manufacturers of drugs, biologics, devices, and medical supplies and physicians and teaching hospitals under the Physician Payments Sunshine Act;
- a requirement to annually report certain information regarding drug samples that manufacturers and distributors provide to licensed practitioners; and
- creation of the Patient-Centered Outcomes Research Institute to oversee, identify priorities in, and conduct comparative clinical effectiveness research, along with funding for such research.

Since its enactment there have been judicial and Congressional challenges to certain aspects of the PPACA to repeal or replace certain aspects of the PPACA.

While Congress has not enacted legislation to comprehensively repeal the PPACA, at least two bills affecting the implementation of the PPACA have been signed into law, including the repeal, effective January 1, 2019, of the tax-based shared responsibility payment imposed by the PPACA on certain individuals who fail to maintain qualifying health coverage for all or part of a year, which is commonly referred to as the "individual mandate." In December 2018, a federal district court in Texas ruled that the PPACA's individual mandate, without the penalty that was repealed effective January 1, 2019, was unconstitutional and could not be severed from the PPACA. As a result, the court ruled the remaining provisions of the PPACA were also invalid. The Fifth Circuit Court of Appeals affirmed the district court's ruling that the individual mandate was unconstitutional, but it remanded the case back to the district court for further analysis of whether the mandate could be severed from the PPACA (*i.e.*, whether the entire PPACA was therefore also unconstitutional). The Supreme Court of the United States granted certiorari on March 2, 2020, heard oral arguments on November 10, 2020, and on June 17, 2021, issued its opinion ruling that Texas and other states that initially challenged the individual mandate did not have standing.

During his tenure, President Trump also signed several Executive Orders, directives, and legislation affecting certain provisions of the PPACA. For example, effective January 1, 2019, the Bipartisan Budget Act of 2018, or the BBA, among other things, further amended portions of the Social Security Act implemented as part of the PPACA to increase from 50% to 70% the point-of-sale discount that pharmaceutical manufacturers who participate in the Medicare Part D Coverage Gap Discount Program must provide to eligible Medicare Part D beneficiaries during the coverage gap phase of the Part D benefit, commonly referred to as the "donut hole," and to reduce standard beneficiary cost sharing in the coverage gap from 30% to 25% in most Medicare Part D plans. Additionally, on December 20, 2019, President Trump signed appropriations legislation for fiscal year 2020 that repealed the PPACA's so-called "Cadillac" tax on certain high-cost employer-sponsored health insurance plans, for tax years beginning after December 31, 2019; the annual fee imposed on certain health insurance providers, for calendar years beginning after December 31, 2020; and the medical device excise tax on non-exempt medical devices, for sales after December 31, 2019. While the Biden administration has repealed or rolled-back certain of the actions taken

29 [Table of Contents](#)

by the Trump administration, in the future, there may be additional challenges and/or amendments to the PPACA. It remains to be seen precisely what any new legislation will provide, when or if it will be enacted, and what impact it will have on the availability and cost of healthcare items and services, including drug products.

In addition, other legislative changes have been proposed and adopted since the PPACA was enacted. These changes include the Budget Control Act of 2011, which, among other things, led to aggregate reductions to Medicare payments to providers of up to 2% per fiscal year effective April 1, 2013 and, due to subsequent legislation, will stay in effect through 2030 unless additional Congressional action is taken, with the exception of a temporary suspension of the payment reduction from May 1, 2020 through December 31, 2020 enacted as part of the CARES Act. Further, the American Taxpayer Relief Act of 2012, among other things, reduced Medicare payments to several types of providers and increased the statute of limitations period for the government to recover overpayments from providers from three to five years. These legislative changes may result in additional reductions in Medicare and other healthcare funding and otherwise affect the prices we may obtain for any of our product candidates for which we may obtain regulatory approval or the frequency with which any such product candidate is prescribed or used.

Further, there has been heightened governmental scrutiny recently over the manner in which drug manufacturers set prices for their marketed products in the United States. Congress is considering various legislative proposals to further increase transparency around prices and price increases, lower out-of-pocket costs for consumers, and decrease spending on prescription drugs by government programs. On September 13, 2020, President Trump issued an executive order directing the Secretary of Health and Human Services to pursue implementation of two new payment models under which Medicare would test whether paying no more than the “most-favored-nation” price for certain included drugs and biological products covered under Part B and Part D, respectively, would mitigate poor clinical outcomes and increased Medicare expenditures associated with high drug costs. If this executive order is implemented, the “most-favored-nation” price would generally reflect the lowest price, after certain adjustments, for a pharmaceutical product sold in an economically comparable member country of the Organisation for Economic Co-operation and Development. On December 28, 2020, the U.S. District Court for the Northern District of California issued a preliminary injunction halting implementation of the executive order nationwide pending completion of the notice and comment process, and on August 10, 2021, the CMS published a proposed rule that would rescind the “most-favored nation” pricing model for Medicare Part B drugs. However, the U.S. Congress continues to conduct inquiries into the prescription drug industry’s pricing practices, and at the state level in the United States, legislatures are also increasingly passing legislation and states are implementing regulations designed to control spending on, and patient out of pocket costs for, drug products. Recently, on August 16, 2022, President Biden signed into law the IRA, which included several measures intended to lower the cost of prescription drugs and limit out-of-pocket spending, including by requiring drug manufacturers to pay rebates to Medicare if they increase prices faster than inflation for drugs used by Medicare beneficiaries. We cannot be certain what impact, if any, such changes will have on the profitability of any of our drug candidates, if approved for commercial use in the future.

At the state level, legislatures are increasingly passing legislation and states are implementing regulations designed to control spending on, and patient out-of-pocket costs for, drug products. Implementation of cost containment measures or other healthcare reforms that affect the pricing and/or availability of drug products may impact our ability to generate revenue, attain or maintain profitability, or commercialize products for which we may receive regulatory approval in the future.

We expect that these, as well as other healthcare reform measures that may be adopted in the future, may result in more rigorous coverage criteria and additional downward pressure on the price that we receive for any approved drug. Any reduction in reimbursement from Medicare or other government programs may result in a similar reduction in payments from private payors. The implementation of cost containment measures or other healthcare reforms may prevent us from being able to generate revenue, attain profitability, or commercialize our drugs.

Privacy and Information Security

We may be subject to privacy and data security regulations and legal requirements in the United States and Europe. As we become more dependent on information technologies to conduct our operations, cyber incidents, including deliberate attacks and attempts to gain unauthorized access to computer systems and networks, may increase in frequency and sophistication. Our systems, servers and platforms and those of our service providers may be vulnerable to privacy and information security incidents such as data breaches, viruses or other malicious code, coordinated attacks, data loss, phishing attacks, ransomware, denial of service attacks, or other security or IT incidents caused by threat actors, technological vulnerabilities or human error. If we, or any of our vendors that support our IT or have access to our data, including any third-party vendors that collect, process and store personal data on our behalf, fail to comply with laws requiring the protection of personal information, or fail to safeguard and defend personal information or other critical data assets or IT systems, we may be subject to regulatory enforcement and fines as well as private civil actions. We may be required to expend significant resources in the response, containment, mitigation of cybersecurity incidents as well as in defense against claims that our information security was unreasonable or otherwise violated applicable laws or contractual obligations.

In the United States, numerous federal and state laws and regulations, including federal health information privacy laws, state data breach notification laws, state health information privacy laws and federal and state consumer protection laws (e.g., Section 5 of the Federal Trade Commission Act), that govern the collection, use, disclosure and protection of health-related and other personal information could apply to our operations or the operations of our collaborators.

Domestic laws in this area are complex and developing rapidly. Many state legislatures have adopted legislation relating to privacy, data security and data breaches. Laws in all 50 states require businesses to provide notice to customers whose personally identifiable information has been disclosed as a result of a data breach. The laws are not consistent, and compliance in the event of a widespread data breach is costly. States are also frequently amending existing laws, requiring attention to frequently changing regulatory requirements.

30Table of Contents

Additionally, the Federal Trade Commission, or FTC, and state attorneys general enforce consumer protection laws that prohibit unfair and deceptive acts and practices, including Section 5 of the FTC Act, which creates standards for the collection, use, dissemination and security of health-related and other personal information. Claims of unfair or deceptive trade practices regarding privacy and security can lead to significant liabilities and consequences, including regulatory investigations, penalties, fines and orders as well as civil claims, which could impact our data practices and operations or cause reputational damage.

Further, HIPAA, as amended by the HITECH, and its implementing regulations, imposes requirements relating to the privacy, security and transmission of individually identifiable health information (also known as “protected health information”). Among other things, HITECH makes HIPAA’s security standards directly applicable to business associates, independent contractors or agents of covered entities that receive or obtain protected health information in connection with providing a service on behalf of a covered entity.

HITECH also created four new tiers of civil monetary penalties, amended HIPAA to make civil and criminal penalties directly applicable to business associates, and gave state attorneys general new authority to file civil actions for damages or injunctions in federal courts to enforce the federal HIPAA laws and seek attorneys’ fees and costs associated with pursuing federal civil actions. In addition, state laws govern the privacy and security of health information in specified circumstances, many of which differ from each other in significant ways and may not have the same effect, thus complicating compliance efforts.

It is important to note, however, that HIPAA and HITECH only apply directly to “covered entities” (healthcare providers, health insurance plans, and healthcare clearinghouses) and “business associates” (third parties providing services to covered entities). Pharvaris, as a private pharmaceutical company sponsoring clinical research, is itself neither a covered entity nor a business associate within the meaning of these laws and their associated regulations. With that in mind, in respect of HIPAA and HITECH, the risk to Pharvaris primarily lies in the potential lack of compliance by investigators and their service providers may result in the regulators invalidating the sharing of personal health information between investigators and Pharvaris. In other words, the failure of Pharvaris’s research partners to comply with these laws could lead to the exclusion of important data from Pharvaris studies.

In addition, state laws in U.S. states, govern the privacy and security of health information in specified circumstances, many of which differ from each other in significant ways and may not have the same effect, thus complicating compliance efforts.

We also may be subject to privacy and data security requirements in Europe. Any clinical trial programs we conduct or research collaborations we enter into in the European Economic Area, or EEA, may subject us to European data protection laws, including the EU General Data Protection Regulation 2016/679, or GDPR. We are subject to the GDPR (as implemented by countries in the EEA), which applies extra-territorially and imposes onerous requirements on controllers (e.g., sponsors) and processors (e.g., CROs, laboratories, third-party vendors) of EEA personal data, including, for example: (i) accountability, transparency and accuracy requirements, and enhanced requirements for obtaining valid consent (separate and apart from informed medical consent); (ii) obligations to consider data protection as any new products or services are developed and to limit the amount of personal data processed; (iii) obligations to comply with data protection rights of data subjects; (iv) ensuring that all processors that process personal data on our behalf have adequate protections in place; and (v) reporting of personal data breaches to the supervisory authority without undue delay (and no later than 72 hours). The GDPR also prohibits the international transfer of personal data from the EEA to countries outside of the EEA unless made to a country deemed to have adequate data privacy laws by the European Commission or where a data transfer mechanism with appropriate safeguards has been put in place, such as the standard contractual clauses, or SCCs, and supplementary measures that provide privacy protections additional to those provided under SCCs. Further, the GDPR provides that countries in the EEA may establish their own laws and regulations further restricting the processing of certain personal data, including genetic data, biometric data, and health data. After assessing the severity and frequency of the EEA personal data processing activities we engage in, we appointed an external data protection officer that has expert knowledge of data protection law and practices and assists us with monitoring internal compliance with the GDPR.

Failure to comply with the GDPR requirements could result in regulatory investigations, enforcement notices requiring us to stop or change the way we use personal data and/or fines of up to 20 million Euros or up to 4% of the total worldwide annual turnover of the preceding financial year, whichever is higher, as well as compensation claims for financial or non-financial loss by affected individuals, negative publicity, reputational harm and a potential loss of business and goodwill.

If our operations are found to be in violation of any of the data protection laws described above or any other laws that apply to us, we may be subject to penalties, including, but not limited to, criminal, civil and administrative penalties, damages, fines, disgorgement, individual imprisonment, possible exclusion from participation in government healthcare programs, injunctions, private qui tam actions brought by individual whistleblowers in the name of the government, class action litigation and the curtailment or restructuring of our operations, as well as additional reporting obligations and oversight if we become subject to a corrective action plan or other agreement to resolve allegations of non-compliance with these laws, any of which could adversely affect our ability to operate our business and our results of operations.

The Foreign Corrupt Practices Act

The Foreign Corrupt Practices Act, or FCPA, prohibits any U.S. individual or business from paying, offering, or authorizing payment or offering of anything of value, directly or indirectly, to any foreign official, political party or candidate for the purpose of influencing any act or decision of the foreign entity in order to assist the individual or business in obtaining or retaining business. The FCPA also obligates companies whose securities are listed in the United States to comply with accounting provisions requiring the Company to maintain books

31 [Table of Contents](#)

and records that accurately and fairly reflect all transactions of the corporation, including international subsidiaries, and to devise and maintain an adequate system of internal accounting controls for international operations.

Additional Regulation

In addition to the foregoing, state and federal laws regarding environmental protection and hazardous substances, including the Occupational Safety and Health Act, the Resource Conservancy and Recovery Act and the Toxic Substances Control Act, affect our business. These and other laws govern our use, handling and disposal of various biological, chemical and radioactive substances used in, and wastes generated by, our operations. If our operations result in contamination of the environment or expose individuals to hazardous substances, we could be liable for damages and governmental fines. We believe that we are in material compliance with applicable environmental laws and that continued compliance therewith will not have a material adverse effect on our business. We cannot predict, however, how changes in these laws may affect our future operations.

European Union

European Medicines Agency

Marketing approvals under the European Union regulatory system may be obtained through a centralized or national marketing authorization procedures. The EMA and the European Commission administer the centralized authorization procedure. Pursuant to Regulation (EC) No. 726/2004 and Regulation (EC) 1394/2007, as amended, this procedure is compulsory for human medicines containing a new active substance to treat for which the therapeutic indication is the treatment of any of the following diseases: acquired immune deficiency syndrome, cancer, neurodegenerative disorders, diabetes, auto-immune diseases and other immune dysfunctions, viral diseases and all drugs that are designated as orphan drugs pursuant to Regulation (EC) No. 141/2000, as amended. Drugs for other indications may be granted a centralized authorization in accordance with Regulation (EC) No. 726/2004 if the drug contains a new active substance and is of a significant therapeutic, scientific or technical innovation or where the granting of authorization in accordance with Regulation (EC) No. 726/2004 is in the interests of patients or animal health at EU level.

When a centralized authorization is granted, the authorization is automatically valid in all Member States of the European Union and by extension in the European Economic Area, or EEA, Norway, Iceland and Liechtenstein. According to Article 2 of Regulation (EC) No 726/2004, the marketing authorization holder must be established in the EEA. This means for the UK that as of the end of the transition period (end of 2020), a marketing authorization holder currently established in the UK has to have transferred its marketing authorization to a holder established in the EEA. The transfer of the marketing authorization must be fully completed and implemented by the marketing authorization holder before the end of the transition period. Also, any application for marketing authorizations must be made by applicants established in the EEA. Therefore, applications made by applicants established in the UK will need to change to an applicant established in the EEA.

Under the centralized authorization procedure, the EMA's Committee for Medicinal Products for Human Use, or CHMP, serves as the scientific committee that evaluates applications and renders opinions about the safety, efficacy and quality of human products on behalf of the EMA. The CHMP is composed of experts nominated by the Competent Authority of each European Union Member State, one of which is appointed to act as rapporteur for the coordination of the evaluation with the possible assistance of a further member acting as a co-rapporteur. The CHMP has 210 days to give its opinion to the EMA as to whether a marketing authorization should be granted. This period will be suspended until such time as the supplementary information requested by the CHMP has been provided by the applicant. Likewise, this time-limit will be suspended for the time allowed for the applicant to prepare oral or written explanations. The evaluation process is complex and involves extensive consultation with the Competent Authorities of the Member States of the European Union and a number of experts. It is possible to appeal the opinion within 15 days of receipt of the notification of the opinion. At the end of the re-examination, which lasts up to 60 active days, the CHMP adopts a final opinion. The European Commission usually takes its decision to grant a legally binding authorization within 67 days after obtaining the CHMP decision.

A marketing authorization that has been granted in the European Union may be suspended or withdrawn if ongoing regulatory requirements are not met or if safety problems are identified. Among other things, marketing authorization holders are required to have risk management plans that use risk minimization strategies beyond product labeling to ensure that the benefits of certain prescription drugs outweigh their risks.

Accelerated Assessment Procedures

When an application is submitted for a marketing authorization in the European Union in respect of drugs for human use which is of major interest from the point of view of public health and in particular from the viewpoint of therapeutic innovation, the applicant may request an accelerated assessment procedure pursuant to Article 14 (9) of Regulation (EC) No. 726/2004, as amended. Based on the request, the justifications presented, and the recommendations of the rapporteurs, the CHMP will formulate a decision. Such a decision will be taken without prejudice to the CHMP opinion (positive or negative) on the granting of a marketing authorization. If the CHMP accepts the request, the timeframe for the evaluation will be reduced from the standard 210 days for the centralized procedure to 150 days, but it is possible that the CHMP can revert to the standard time limit for the centralized procedure if it considers that it is no longer appropriate to conduct an accelerated assessment.

Conditional Marketing Authorization and Authorization under Exceptional Circumstances

32[Table of Contents](#)

A conditional marketing authorization is valid for one year, can be renewed annually and may be requested by an applicant or proposed by the CHMP for medicinal products which aim at:

- the treatment, prevention or medical diagnosis of seriously debilitating or life-threatening diseases;
- medicinal products to be used in emergency situations in response to public health threats recognized either by the World Health Organization or by the European Union in the framework of Decision No. 1082/2013/EU (e.g. COVID-19 treatments); or
- medicinal products designated as orphan medicinal products in accordance with Regulation (EC) No. 141/2000, as amended.

A conditional marketing authorization may be requested by an applicant or proposed by the CHMP for medicinal products if all of the following requirements are met:

- the risk-benefit balance of the medicinal product, as defined in Article 1(28a) of Directive 2001/83/EC, as amended, is positive;
- it is likely that the applicant will be in a position to provide comprehensive clinical data;
- unmet medical needs will be fulfilled (no existing satisfactory methods or the medicinal product provides major therapeutic advantage); and
- the benefit to public health of the immediate availability on the market of the medicinal product concerned outweighs the risk inherent in the fact that additional data are still required.

The legal basis for a conditional marketing authorization is Article 14-a of Regulation (EC) No. 726/2004, as amended. The provisions for the granting of such an authorization are further elaborated in Regulation (EC) No. 507/2006. The holder will be required to complete ongoing studies or to conduct new studies within a specified period of time with a view to confirming that the benefit-risk balance is positive. In addition, specific obligations may be imposed in relation to the collection of pharmacovigilance data.

In addition, authorization under exceptional circumstances may be requested when it is not possible to provide comprehensive data on the efficacy and safety under normal conditions of use, because:

- the indications for which the product in question is intended are encountered so rarely that the applicant cannot reasonably be expected to provide comprehensive evidence;
- in the present state of scientific knowledge, comprehensive information cannot be provided; or
- it would be contrary to generally accepted principles of medical ethics to collect such information.

The legal basis for the marketing authorization under exceptional circumstances is Article 14 (8) of Regulation (EC) No. 726/2004, as amended, and the relevant documentation for applications in exceptional circumstances are laid down in Part II of Annex I of Directive 2001/83/EC, as amended. The authorization under exceptional circumstances is granted subject to a requirement for the applicant to meet certain conditions, in particular concerning the safety of the medicinal product, notification to the Competent Authorities of any incident relating to its use, and action to be taken. The renewal of the marketing authorization of a medicinal product under exceptional circumstances follows the same rules as a "normal" marketing authorization. After five years, the marketing authorization will then be renewed under exceptional circumstances for an unlimited period, unless the Competent Authority decides, on justified grounds relating to pharmacovigilance, to proceed with one additional five-year renewal.

Manufacturing and Manufacturers' Authorization

Directive 2003/94/EC, as amended, requires that the manufacturing of investigational medicinal products and approved drugs in the EEA is subject to a separate manufacturing authorization and must be conducted in strict compliance with GMP requirements, which mandate the methods, facilities, and controls used in manufacturing, processing, and packing of drugs to assure their safety and identity. Manufacturers must have at least one Qualified Person, or QP, permanently and continuously at their disposal. Although the ultimate responsibility for the performance of a medicinal product over its lifetime, its safety, quality and efficacy, lies with the marketing authorization holder, the QP is responsible for ensuring that each batch of finished product released onto the market has been manufactured in accordance with GMP, in compliance with EU laws and the specifications set out in the marketing authorization or investigational medicinal product dossier. Certification can only be performed by a QP of the manufacturer and/or importer, which are described in the marketing authorization. GMP requirements are enforced through mandatory registration of facilities and inspections of those facilities. Failure to comply with these requirements could interrupt supply and result in delays, unanticipated costs and lost revenues, and subject the applicant to potential legal or regulatory action, including but not limited to warning letters, suspension of manufacturing, seizure of product, injunctive action or possible civil and criminal penalties.

Commercialization and Promotion

The commercialization and promotion of authorized medicinal products, including industry-sponsored continuing medical education and advertising directed toward the prescribers of drugs, are strictly regulated in the European Union, notably under, among others, Directive 2001/83/EC, as amended, guidance published by the European Commission and the EMA, laws, regulations and guidance set out by the Member States of the European Union and industry wide codes of conduct. The applicable regulatory framework aims to ensure that information provided by holders of marketing authorizations regarding their products is truthful, balanced and accurately reflects the safety and efficacy claims authorized by the EMA or by the Competent Authority of the authorizing Member State. Failure to comply with these requirements can result in adverse publicity, warning letters, corrective advertising and potential civil and criminal penalties.

33[Table of Contents](#)

Commercialization and promotion of prescription only medicinal products to consumers or patients (directly or indirectly) is strictly forbidden. Advertising of medicines pre-approval or off-label is also prohibited.

Regulatory Data Protection and Market Exclusivity

In the European Union, all new active substances approved on the basis of a complete independent data package benefit from an 8+2+1 -year data/market exclusivity regime. This regime consists of (i) a regulatory data protection period and market exclusivity period of eight years, (ii) a market exclusivity period of an additional two years after the eight-year period and (iii) an extended market exclusivity period of one year after the 10-year period if, during the first eight years of those 10 years, the marketing authorization holder obtains an approval for one or more new therapeutic indications which, during the scientific evaluation prior to their approval, are determined to bring a significant clinical benefit in comparison with existing therapies. Under the current rules, a third party may reference the nonclinical and clinical data of the original innovator beginning eight years after notification of the grant of the approval in the European Union, but the third party may market a generic version after only 10 or, where applicable, 11 years have lapsed from the notification of the grant of the approval.

Orphan Designation

Medicines that meet the criteria for orphan designation benefit from the incentive of 10 years of market exclusivity once they are approved for commercialization in the European Union. This protects them from market competition with similar medicines with the same indication once they are approved. Market exclusivity is awarded by the European Commission and is specifically linked to one specific orphan designation for which a marketing authorization has been granted. Each orphan designation carries the potential for one market exclusivity for a particular indication. A medicine that has several separate orphan designations for different indications can have several separate market exclusivities if these refer to separate designated conditions. A designated orphan medicinal product shall be removed from the European Union's Community register of orphan medicinal products at the end of the period of market exclusivity.

The period of market exclusivity is extended by two years for medicines that also have complied with an agreed pediatric investigational plan, or PIP. This period may, however, be reduced to six years if, at the end of the fifth year, it is established that the product no longer meets the criteria for orphan drug designation, including among other things, if the product is sufficiently profitable so that market exclusivity is no longer justified.

Notwithstanding the foregoing, a marketing authorization may be granted, for the same therapeutic indication, to a similar drug if:

- the holder of the marketing authorization for the original orphan drug has given its consent to the second applicant;
- the holder of the marketing authorization for the original orphan drug is unable to supply sufficient quantities of the drug; or
- the second applicant can establish in the application that the second drug, although similar to the orphan drug already authorized, is safer, more effective or otherwise clinically superior.

Regulation (EC) No 847/2000 lays down definitions of the concepts "similar drug" and "clinical superiority."

In order to be eligible for incentives made available by the European Union and by the Member States to support research into, and the development and availability of, orphan drugs, the medicinal product needs to be designated as an orphan drug pursuant to Regulation (EC) No. 141/2000, as amended. Regulation (EC) No. 141/2000, as amended, states that a medicinal product shall be designated as an orphan medicinal product if its manufacturer can establish:

- that it is intended for the diagnosis, prevention or treatment of a life-threatening or chronically debilitating condition affecting not more than five in 10,000 persons in the European Union when the application is made or that it is intended for the diagnosis, prevention or treatment of a life-threatening, seriously debilitating or serious and chronic condition in the European Union and that without incentives it is unlikely that the commercialization of the medicinal product in the European Union would generate sufficient return to justify the necessary investment; and
- that there exists no satisfactory method of diagnosis, prevention or treatment of the condition in question that has been authorized in the community or, if such method exists, the medicinal product will be of significant benefit to those affected by that condition.

Small-or Medium-Sized Enterprise Status

In the European Union, manufacturers may benefit from further incentives, including administrative and procedural assistance and fee reductions when they are classified as a small-or medium-sized enterprises, or SME. Within the SMEs, medium enterprises are defined as those which employ between 50 to 249 persons and which have an annual turnover not exceeding €50 million or an annual balance sheet total not exceeding €43 million; a small enterprise is defined as an enterprise which employs between 10 to 49 persons and whose annual turnover or annual balance sheet total does not exceed €10 million; and a microenterprise is defined as an enterprise which employs fewer than 10 persons and whose annual turnover or annual balance sheet total does not exceed €2 million.

Administrative, regulatory and financial support is available to companies assigned the SME status by the EMA, including:

- direct assistance by phone, email, teleconference or through briefing meetings on regulatory aspects of the pharmaceutical legislation;
- fee exemptions and reductions for pre-and post-authorization regulatory procedures, including scientific advice, inspections and pharmaco-vigilance;
- assistance with translations of product information into all official European Union languages;
- inclusion in an online SME register, which is an important source of information on the EU-based SMEs involved in the manufacturing, development or marketing of medicines and promotes partnering and networking between the SMEs;
- guidance on clinical data publication and a free redaction tool license;
- liaison with academic investigators in pediatric-medicine research through the European Network of Pediatric Research at the EMA; and
- workshops and training sessions.

Development of Medicines for Children

Several incentives for the development of medicines for children are available in the European Union:

- medicines that have been authorized across the European Union with the results of PIP studies included in the product information are eligible for an extension of their patent protection by six months even when the studies' results are negative;
- for orphan medicines, the incentive is an additional two years of market exclusivity;
- scientific advice and protocol assistance at the EMA are free of charge for questions relating to the development of medicines for children; and
- medicines developed specifically for children that are already authorized but are not protected by a patent or supplementary protection certificate, can apply for a pediatric-use marketing authorization, or PUMA, which provides 10 years of market protection.

Pediatric Regulation

On January 26, 2007, the Pediatric Regulation (Regulation (EC) No. 1901/2006 and Regulation (EC) No. 1902/2006) came into force in the European Union. Its objective is to improve the health of children in the European Union by facilitating the development and availability of medicines for children from birth up to 18 years of age, ensuring that medicines for use in children are of high quality, ethically researched and authorized appropriately and improving the availability of information on the use of medicines for children. The aim is to achieve this without subjecting children to unnecessary trials or delaying the authorization of medicines for use in adults. The Pediatric Regulation established the Pediatric Committee, or PDCO, which is responsible for coordinating the EMA's work on medicines for children. The Committee's main role is to determine the studies that companies must carry out on children as part of PIPs. At least an approved PIP needs to be in place before applying for marketing authorization. The PDCO grants deferrals for some medicines, allowing a company to delay development of the medicine in children until there is enough information to demonstrate its effectiveness and safety in adults. The PDCO also grants waivers when development of a medicine in children is not needed or is not appropriate, such as for diseases that only affect the elderly population. When the approved PIP contains studies that need to be performed, the proposed study design and timelines need to be adhered to.

Pharmaceutical Coverage, Pricing and Reimbursement

Significant uncertainty exists as to the coverage and reimbursement status of any product candidates for which we obtain regulatory approval. Countries have different pricing and reimbursement schemes. In the European Union, the United States and markets in other countries, sales of any products for which we receive regulatory approval for commercial sale will depend, in part, on the extent to which third-party payors provide coverage and establish adequate reimbursement levels for such products.

In the European Union, governments influence the price of pharmaceutical products through their pricing and reimbursement rules and control of national health care systems that fund a large part of the cost of those products to consumers. Some jurisdictions operate positive and negative list systems under which products may only be marketed once a reimbursement price has been agreed. To obtain reimbursement or pricing approval, some of these countries may require the completion of clinical trials that compare the cost-effectiveness of a particular product candidate to currently available therapies. Other member states allow companies to fix their own prices for medicines but monitor and control company profits. Special pricing and reimbursement rules may apply to orphan drugs. Inclusion of orphan drugs in reimbursement systems tends to focus on the medical usefulness, need, quality and economic benefits to patients and the healthcare system as for any drug. The downward pressure on health care costs has become very intense. As a result, increasingly high barriers are being erected to the entry of new products. In addition, in some countries, cross-border imports from low-priced markets exert a commercial pressure on pricing within a country.

In the United States, third-party payors include federal and state healthcare programs, private managed care providers, health insurers and other organizations. Even if our product candidates are approved, sales of our products will depend, in part, on the extent to which third-party payors provide coverage and establish adequate reimbursement levels for such products. The process for determining

whether a third-party payor will provide coverage for a product may be separate from the process for setting the price of a product or for establishing the reimbursement rate that such a payor will pay for the product. Third-party payors may limit coverage to specific products on an approved list, also known as a formulary, which might not include all of the FDA-approved products for a particular indication. Third-party payors are increasingly challenging the price, examining the medical necessity and reviewing the cost-effectiveness of medical products, therapies and services, in addition to questioning their safety and efficacy. We may need to conduct expensive pharmacoeconomic studies in order to demonstrate the medical necessity and cost-effectiveness of our product candidates, in addition to the costs required to obtain the FDA approvals. Our product candidates may not be considered medically necessary or cost-effective. A payor's decision to provide coverage for a product does not imply that an adequate reimbursement rate will be approved. Further, one payor's determination to provide coverage for a product does not assure that other payors will also provide coverage for the product. Adequate third-party reimbursement may not be available to enable us to maintain price levels sufficient to realize an appropriate return on our investment in product development.

In addition, prices for drugs may be reduced by mandatory discounts or rebates required by federal health care programs (such as the Medicaid Drug Rebate Program and the 340B Drug Pricing Program) or discounts and rebates requested by private payors. In addition, any future relaxation of laws that presently restrict imports of drugs from countries where they may be sold at lower prices than in the United States may also impact the pricing of drugs. It is difficult to predict how Medicare coverage and reimbursement policies will be applied to products for which the Company receives marketing approval in the future and coverage and reimbursement under different federal health care programs is not always consistent. Further, private payors often follow the coverage and reimbursement policies established under Medicare. If reimbursement is not available or is available only at limited levels, we may not be able to successfully commercialize our products for which we receive marketing approval.

The containment of healthcare costs also has become a priority of federal, state and foreign governments and the prices of drugs have been a focus in this effort. Governments have shown significant interest in implementing cost-containment programs, including price controls, restrictions on reimbursement and requirements for substitution of generic products. Adoption of price controls and cost-containment measures, and adoption of more restrictive policies in jurisdictions with existing controls and measures, could further limit a company's revenue generated from the sale of any approved products.

Coverage policies and third-party reimbursement rates may change at any time. Even if favorable coverage and reimbursement status is attained for one or more products for which a company or its collaborators receive marketing approval, less favorable coverage policies and reimbursement rates may be implemented in the future.

The marketability of any product candidates for which we receive regulatory approval for commercial sale may suffer if the government and third-party payors fail to provide adequate coverage and reimbursement. In addition, emphasis on managed care in the United States has increased and we expect will continue to increase the pressure on healthcare pricing. Coverage policies and third-party reimbursement rates may change at any time. Even if favorable coverage and reimbursement status is attained for one or more products for which we receive regulatory approval, less favorable coverage policies and reimbursement rates may be implemented in the future.

2.3 Organizational structure

We were incorporated as a Dutch private company with limited liability (*besloten vennootschap*) and currently exist as a Dutch public company with limited liability (*naamloze vennootschap*) (after the conversion of our legal form in the first quarter of 2021), with operating subsidiaries in the Netherlands, Switzerland and the United States.

The following diagram illustrates our corporate structure:

2.4 Property, plants and equipment

We have offices in Leiden, the Netherlands, Lexington, Massachusetts (United States) and Zug, Switzerland. Our office space in Leiden measuring approximately 290 square meters is rented through November 30, 2025; our offices in Massachusetts measuring

36 [Table of Contents](#)

approximately 622 square meters is rented through December 31, 2029 and our office space in Zug measuring approximately 58 square meters is rented on a monthly basis.

ITEM 4A. UNRESOLVED STAFF COMMENTS

2.5 Operating results

A. Operating Results

You should read the following discussion of our financial condition and results of operations in conjunction with the financial statements and the notes included elsewhere in this Annual Report. The following discussion contains forward-looking statements that involve certain risks and uncertainties. Our actual results could differ materially from those discussed in these statements. Factors that could cause or contribute to these differences include those discussed below and elsewhere in this Annual Report, particularly under the “ITEM 3. KEY INFORMATION—D. Risk factors” and “Cautionary Statement Regarding Forward-Looking Statements” sections.

Our audited consolidated financial statements are included elsewhere in this Annual Report. These financial statements are prepared in accordance with the IFRS Accounting Standards (IFRS) as issued by the International Accounting Standards Board (IASB). As permitted by the rules of the SEC for foreign private issuers, we do not reconcile our financial statements to U.S. GAAP.

Overview

We are a late-stage biopharmaceutical company focused on the development and commercialization of innovative therapies for rare diseases with significant unmet need, initially focused on angioedema and other bradykinin-mediated diseases. Our first molecule, deucricitabant (previously referred to as PHA-022121 or PHA121), is a novel, oral, small-molecule bradykinin B2 receptor antagonist under development for the prevention or treatment of attacks due to bradykinin-mediated angioedema (AE-BK), including hereditary angioedema (HAE) and acquired angioedema due to C1-inhibitor deficiency (AAE-C1INH). Deucricitabant has the potential to address unmet medical needs by bringing improvements beyond the therapeutic profile of existing medicines and providing patients with quality of life and convenience that is superior to current standard-of-care. We believe deucricitabant has the potential to provide injectable-like efficacy™ and placebo-like tolerability with the convenience of an oral therapy for both the prophylactic and on-demand treatment of HAE attacks.

Deucricitabant may address unmet medical needs of people living with AE-BK by both preventing attacks from occurring, using an extended-release (XR) tablet formulation of deucricitabant (previously referred to as PHVS719), as well as treat the manifestations of attacks, using an immediate-release (IR) capsule formulation of deucricitabant (previously referred to as PHVS416). The XR tablet formulation is designed to maintain therapeutic levels for over 24 hours and to achieve a steady-state plasma concentration within 72 hours, supporting a once-daily dosing regimen. The IR capsule formulation is designed to rapidly reach therapeutic exposure in order to mitigate HAE attacks symptoms quickly and completely with a single oral dose.

In addition to the differentiation of our individual products, having on-demand and prophylactic products with the same active ingredient enables patients to maintain a trusted active medicine when they change their dosing regimen and delivery mechanism moving from on-demand to prophylactic treatment (or back). This may be particularly valued by children or adolescents who typically begin therapy with on-demand only and gradually move to prophylaxis as attack frequency increases (commonly after puberty).

We initiated RAPIDe-3, a global, pivotal Phase 3, placebo-controlled study to evaluate deucricitabant IR capsule (20 mg) for the on-demand treatment of attacks in people 12 years and older with HAE, in March 2024 and reported topline data in December 2025. Deucricitabant demonstrated a clinically differentiated profile by meeting the primary and all key secondary efficacy endpoints with statistical significance and was well tolerated. Pharvaris plans to submit a New Drug Application (NDA) with the U.S. Food and Drug Administration (FDA) in the first half of 2026 for the on-demand treatment of acute attacks of HAE.

In December 2024, we initiated CHAPTER-3, a global, pivotal, randomized, double-blind, placebo-controlled Phase 3 study of orally administered deucricitabant extended-release tablet for the prophylaxis against angioedema attacks in adults and adolescents (12 years and older) with HAE.

In addition, we are also running open-label extension studies in both on-demand (RAPIDe-2) and prophylactic (CHAPTER-4) settings to collect long-term safety and efficacy data in HAE patients. In October 2025, we initiated CREAATE, a global, pivotal Phase 3 study of to assess the efficacy and safety of deucricitabant for the prophylactic and on-demand treatment of AAE-C1INH attacks.

A wide variety of events beyond our control, including natural or man-made disasters, power shortages, fires, extreme weather conditions, pandemics, epidemics or outbreaks of infectious diseases, political instability or other events could disrupt our business or operations or those of our development partners, manufacturers, regulators or other third parties with whom we conduct business now or in the future. These events may cause businesses and government agencies to be shut down, supply chains to be interrupted, slowed, or rendered inoperable, and individuals to become ill, quarantined, or otherwise unable to work and/or travel due to health reasons or governmental restrictions. Additionally, we are exposed to a variety of risks in the ordinary course of our business, including, but not limited to, foreign currency risk and interest rate risk. We regularly assess each of these risks to minimize any adverse effects on our business as

37 [Table of Contents](#)

a result of those factors. For a detailed discussion, see Note 17 to our consolidated financial statements included elsewhere in this Annual Report.

In addition, the retaliatory measures that have been taken, or could be taken in the future, by the United States, NATO, and other countries with respect to the invasion of Ukraine and the conflict in the Middle East have created global security concerns that could result in regional conflicts and also adversely affect our ability to conduct ongoing and future clinical trials of our product candidates. For example, our RAPIDe-1 and CHAPTER-1 studies include a significant number of patients in Germany, Poland, and Bulgaria, and we have a patient in Israel. A further escalation of the conflict in Ukraine may potentially impact our ability to complete our ongoing and planned clinical trials in these countries on a timely basis, or at all. Clinical trials in these countries could be suspended or terminated, and we may be prevented from obtaining data on patients already enrolled at affected sites. Any of the foregoing could impede the execution of our clinical development plans.

A discussion of our financial condition and results of operations for the year ended December 31, 2024 can be found in our annual report on Form 20-F, filed with the SEC on April 7, 2025.

Financial operations overview

Revenues

We did not record any revenues during the period covered by the historical financial information included in this Annual Report. We do not expect to recognize any revenues before we are able to commercialize our first product.

Research and development expenses

We are focused on the clinical development of deucricitibant. Since our inception, we have devoted substantially all our resources to research and development efforts relating to the development of deucricitibant and our product candidates IR and XR. We expect that we will continue to incur significant research and development expenses as we seek to complete the clinical development of our product candidate XR, and achieve regulatory approval for, our product candidates IR and XR, and in connection with discovery and development of any additional product candidates.

Research and development expenses consist of the following:

- employee benefits expenses, which includes salaries, pensions, share-based compensation ("SBC") expenses, bonus plans, travel and other related costs for research and development staff;
- nonclinical expenses, which include costs of our outsourced discovery and nonclinical development studies;
- clinical expenses, which includes costs of conducting and managing our sponsored clinical trials, including clinical investigator cost, costs of clinical sites, and costs for CROs assisting with our clinical development programs;
- manufacturing expenses, which include costs related to the manufacturing of active pharmaceutical ingredients and manufacturing of the products used in our clinical trials and research and development activities;
- costs related to regulatory activities, including collecting data, preparing and submitting filings, communicating with regulatory authorities and reviewing the design and conduct of clinical trials for compliance with applicable requirements;
- costs in connection with investigator-sponsored clinical trials and evaluations;
- advisers' fees, including discovery, nonclinical, clinical, chemistry, manufacturing, and controls-related and other consulting services;
- intellectual property costs, which includes costs associated with obtaining and maintaining patents and other intellectual property; and
- license costs.

We expect our total research and development expenses to increase in 2026, driven by activities supporting the preparation and submission of the New Drug Application for IR to the U.S. FDA, as well as the continued development of our XR product candidate and our clinical study in AAE.

There is a risk that any clinical development or product discovery program may not result in commercial approval. To the extent that we fail to obtain approval to commercialize our product candidate in a timely manner, we would need to continue to conduct nonclinical studies or clinical trials over a longer period of time, and we anticipate that our research and development expenses may further increase.

Clinical development timelines and associated costs may vary significantly and the successful development of our product candidate is highly uncertain. At this time, we cannot reasonably estimate the nature, timing, and estimated costs of the efforts, including patient recruitment and selection that will be necessary to complete the development of, or the period, if any, in which material net cash inflows may commence from, our product candidates. Moreover, we cannot assure that we will be able to successfully develop or commercialize our product candidates, if approved for marketing. This is due to numerous risks and uncertainties associated with developing drugs. See "ITEM 3. KEY INFORMATION: — D. Risk factors."

38 [Table of Contents](#)

Certain consulting, and facility-related costs previously reported under General and Administrative expenses were determined to be more appropriately classified as Research and Development expenses. The Company reclassified approximately €4.6 million from General and Administrative expenses to Research and Development expenses for the year ended December 31, 2025. This reclassification had no impact on the total operating expenses, net loss, or loss per share.

Selling and distribution expenses

Historically, we have not incurred any selling and distribution expenses. We anticipate incurring substantial selling and distribution expenses in future periods in order to establish a U.S. infrastructure for marketing and distribution, obtain supplies of active pharmaceutical ingredients, and manufacture commercial quantities of our product candidate.

General and administrative expenses

We anticipate that we will continue to incur significant general and administrative expenses as we advance our research and development portfolio. General and administrative expenses consist of the following:

- employee benefits, including salaries, pensions, share-based compensation expenses, bonus plans and other related costs for staff and independent contractors in executive and operational functions;
- independent auditors' and advisers' fees, including accounting, tax, legal and other consulting services;
- rental expenses, insurance, facilities and IT expenses and other general expenses relating to our operations;
- travel related expenses; and
- expenses related to the build-out of our commercial organization, including assessments of the HAE market landscape, pricing research and congress attendance.

We anticipate that the continuing development of our business will contribute to future increase in general and administrative expenses. We also expect that general and administrative expenses will increase in the future as we incur additional costs associated with being a public company in the United States.

We undertook a review of our expense classification methodology within the General and Administrative section to better align with the nature of the underlying activities and industry practices. As a result of this review, €2.4 million of pre-commercial costs previously reported under "Other expenses" were determined to be more appropriately classified in other line items within the table. Variances that are not discussed below, are due to reclassifications and/or had no impact on the total General and Administrative expenses for the year ended December 31, 2025.

Share-based compensation expenses

In 2016, we implemented an Equity Incentive Plan, or the Plan, in order to advance the interests of our shareholders by enhancing our ability to attract, retain and motivate persons who are expected to make important contributions to us and by providing such persons with performance-based incentives that are intended to better align the interests of such persons with those of our shareholders. In order to incentivize our directors and employees, our Board adopted the Pharvaris N.V. 2021 Equity Incentive Plan, or the 2021 Plan, for employees, consultants and directors prior to the completion of our initial public offering. The 2021 Plan became effective upon our conversion from Pharvaris B.V. into Pharvaris N.V., which occurred prior to the consummation of our initial public offering. The 2021 Plan provides for the grant of options, stock appreciation rights, restricted stock, RSUs, performance stock awards, other stock-based awards, performance cash awards and substitute awards.

The fair values of these instruments are recognized as personnel expenses in either research and development expenses or general and administrative expenses.

The SBC expense recorded for the years ended December 31, 2025, 2024 and 2023 were €19.1 million, €16.2 million and €10.7 million, respectively.

Comparison of the years ended December 31, 2024 and 2023

A discussion of the financial results for the year ended December 31, 2024 as compared to the year ended December 31, 2023 can be found in the section entitled "Item 5. Operating and Financial Review and Prospects—A. Operating Results— Financial operations overview—Comparison of the years ended December 31, 2024 and 2023" in our annual report on Form 20-F, filed with the SEC on April 7, 2025.

Comparison of the years ended December 31, 2025 and 2024

The following table summarizes our loss for the periods indicated:

	For the year ended December 31,		Change	%
	2025	2024		
	(in €)			
Research and development expenses	(124,478,334)	(98,563,529)	(25,914,805)	26%
General and administrative expenses	(45,344,598)	(47,124,638)	1,780,040	(4)%
Total operating expenses	(169,822,932)	(145,688,167)	(24,134,765)	17%
Finance income (expense)	(3,888,564)	13,291,664	(17,180,228)	(129)%
Loss before income tax	(173,711,496)	(132,396,503)	(41,314,993)	31%
Income taxes	(1,987,901)	(1,825,024)	(162,877)	9%
Loss for the period	(175,699,397)	(134,221,527)	(41,477,870)	31%

Research and development expenses

	For the year ended December 31,		Change	%
	2025	2024		
	(in €)			
Clinical expenses	(67,744,537)	(55,867,694)	(11,876,843)	21%
Personnel expenses	(35,755,155)	(27,767,184)	(7,987,971)	29%
Manufacturing costs	(12,024,982)	(9,434,537)	(2,590,445)	27%
Nonclinical expenses	(7,485,648)	(3,324,513)	(4,161,135)	125%
License costs	(1,065,471)	(1,592,687)	527,216	(33)%
Intellectual property costs	(402,541)	(576,914)	174,373	(30)%
Total research and development expenses	(124,478,334)	(98,563,529)	(25,914,805)	26%

Research and development expenses increased by €25.9 million in 2025, or 26%, from €98.6 million for the year ended December 31, 2024 to €124.5 million for the year ended December 31, 2025. The increase in research and development expenses was primarily driven by increased clinical and personnel expenditure.

For the years ended December 31, 2025 and 2024, clinical expenses were €67.7 million and €55.9 million, respectively. This represents an increase of €11.9 million, or 21%. The increase in clinical expenses is primarily due to higher expenses in the deucricitabant Phase 3 studies (IR, XR and AAE), although expenses for the IR program slowed down towards the data readout in December 2025, while XR and AAE continued enrolling patients through the end of 2025 (see project-specific table below).

For the years ended December 31, 2025 and 2024, personnel expenses were €35.8 million and €27.8 million, respectively. This represents an increase of €8.0 million, or 29%. The increase in personnel expenses is primarily driven by increases in salary, bonus and benefits expenses for existing employees and hiring new employees to support the three Phase 3 studies. The remaining increase in personnel expenses is driven by SBC expenses due to the new grants made during the period. SBC expense in the current period was €8.6 million versus €7.9 million in the prior period.

The following table summarizes our research and development expenses by project for the years ended December 31, 2025 and 2024:

	For the year ended December 31,		Change	%
	2025	2024		
	(in €)			
Project-Specific Expenses				
On-Demand (IR) (HAE - Phase 3)	(28,227,615)	(30,528,841)	2,301,226	(8)%
Prophylaxis (XR) (HAE - Phase 3)	(32,103,855)	(27,033,364)	(5,070,491)	19%
AAE (AAE - Phase 3)	(6,947,530)	(212,533)	(6,734,997)	3169%
Unallocated Expenses				
Personnel	(35,755,155)	(27,767,184)	(7,987,971)	29%
Other	(21,444,179)	(13,021,606)	(8,422,573)	65%
Total research and development expenses	(124,478,334)	(98,563,529)	(25,914,805)	26%

On-Demand (IR) project-specific expense decreased in the second half of 2025, due to completion of the RAPIDe-3 pivotal Phase 3

study.

Prophylaxis (XR) project-specific expense increased due to continued enrollment in the CHAPTER-3 pivotal Phase 3 study.

AAE project-specific expense increased during the current period due to the ramp-up of CREAATE, a global, pivotal Phase 3 study.

General and Administrative Expenses

	For the year ended December 31,		Change	%
	2025	2024		
	(in €)			
Personnel expenses	(23,139,822)	(18,883,708)	(4,256,114)	23%
Professional fees	(8,616,327)	(7,757,750)	(858,577)	11%
Insurance, facilities and office expenses	(5,957,027)	(6,509,691)	552,664	(8)%
Accounting, tax and auditing fees	(2,626,525)	(4,017,669)	1,391,144	(35)%
Travel expenses	(1,212,356)	(2,129,631)	917,275	(43)%
Consulting fees	(103,848)	(858,843)	754,995	(88)%
Other expenses	(3,688,693)	(6,967,346)	3,278,653	(47)%
General and administrative expenses	(45,344,598)	(47,124,638)	1,780,040	(4)%

General and administrative expenses decreased by €1.8 million, or (4)% from €47.1 million for the year ended December 31, 2024 to €45.3 million for the year ended December 31, 2025. The decrease was primarily driven by an increase of €3.9 million in personnel and professional Fees, offset by €6.9 million across the remaining general and administrative expenses categories.

For the years ended December 31, 2025 and 2024, personnel expenses were €23.1 million and €18.9 million, respectively. This represents an increase of €4.3 million, or 23%. The increase was primarily driven by the transition from contractors to employees, higher salaries, bonuses, and benefits for existing staff, and the hiring of additional employees to support growth. Share-based compensation expense also increased as a result of equity awards granted to new and existing employees. Share-based compensation expense in the current-year period was €10.4 million compared to €8.3 million in the prior-year period.

Excluding the previously described reclassification of €4.6 million from General and Administrative expenses to Research and Development expenses, the €6.9 million decline was driven primarily by the absence of €0.7 million in one-time Investor Relations expenses associated with financing that was recorded in consulting fees, as well as a €0.8 million reduction in legal fees that was recorded in professional fees. The decrease also reflects a €1.2 million reduction in consulting costs that was recorded in accounting, tax and audit fees, resulting from the replacement of external contractors with internal employees, a €1.0 million decrease in implementation related expenditures, and a €0.9 million reduction in conference, event, and other administrative expenses.

Finance (expense) / income - net

Finance (expense) / income – net, was (€3.9) million for the year ended December 31, 2025, compared to €13.3 million in 2024, representing a change of €17.2 million. This variance was primarily driven by a €19.1 million reduction in the value of U.S. dollar-denominated bank balances due to foreign exchange exposure, as the U.S. dollar depreciated by approximately 12% against the euro in 2025, compared to a 6% appreciation in 2024, partially offset by a €1.1 million increase in interest income.

Income taxes

The current period losses for which no deferred tax asset has been recognized, consists of the unrecognized tax effect of losses incurred in the principal Company in Switzerland. Following discussions with the Dutch tax authorities in November 2022, the Company concluded that foreign exchange results should be allocated to the principal Company in Switzerland. As a result, the current losses for the principal Company are partly exacerbated by the allocated foreign exchange results. The principal Company did not recognize the tax benefit of the losses incurred in previous years.

The Company and its subsidiaries have tax loss carry-forwards as of December 31, 2025 of approximately €643.0 million (2024: €449.8 million; 2023: €325.0 million), that are available for offsetting against future taxable profits of the Companies in which the losses arose. In the Netherlands, profits in a given year can be offset against tax loss carry forwards for an unlimited period of time. The amount of the offset is, however, limited to 50% of taxable income (in excess of €1.0 million). Under Swiss law, losses can be offset against future income or capital gains for seven years.

Critical accounting estimates and judgments

We believe that the following accounting policies involve a high degree of judgment and complexity. Accordingly, these are the policies we believe are the most critical to aid in fully understanding and evaluating our consolidated financial condition and results of our operations. See Note 2 to our consolidated financial statements included elsewhere in this Annual Report for a description of our other material accounting policies. The preparation of our consolidated financial statements in conformity with IFRS requires us to make estimates and judgments that affect the amounts reported in those financial statements and accompanying notes. Although we believe that

41 [Table of Contents](#)

the estimates we use are reasonable, due to the inherent uncertainty involved in making those estimates, actual results reported in future periods could differ from those estimates.

Share-based Compensation Arrangements

We adopted an equity-settled share-based compensation plan in 2016, pursuant to which certain participants are granted the right to acquire ordinary shares or RSUs of the Company. This plan has been superseded by the 2021 long term incentive plan. The grants made under these plans are accounted for in accordance with the policy as stated in Note 2.15 to our consolidated financial statements included elsewhere in this Annual Report. The total amount to be expensed is determined by reference to the fair value of the options or restricted stock units granted. The fair value of the options is measured at the date of grant using the Black-Scholes formula.

The use of the Black-Scholes formula requires use of certain assumptions relating to the expected option life, the volatility of stock price, the determination of an appropriate risk-free interest rate and expected dividends.

The input used in the measurement of the fair value per option at each grant/measurement date using the Black-Scholes formula (including the related number of options and the fair value of the options) were as follows:

	March 12, 2025	March 12, 2025	August 1, 2024	April 15, 2024	April 11, 2024	April 11, 2024	November 15, 2023	April 6, 2023
Number of options	75,000	555,000	75,000	230,000	70,000	485,000	90,000	846,000
Fair value of the options	€ 11.86	€ 12.19	€ 11.65	€ 15.41	€ 16.83	€ 16.90	€ 12.27	€ 5.92
Fair value of the ordinary shares	€ 14.71	€ 14.71	€ 14.43	€ 18.97	€ 20.80	€ 20.80	€ 15.12	€ 7.36
Exercise price	€ 14.74	€ 14.74	€ 14.43	€ 18.97	€ 20.80	€ 20.80	€ 15.12	€ 7.36
Expected volatility (%)	105%	105%	100%	100%	105%	100%	100%	100%
Expected life (years)	5.5	6.1	6.1	6.1	5.5	6.1	6.1	6.1
Risk-free interest rate (%)	4.3%	4.3%	4.0%	4.7%	4.7%	4.7%	4.6%	3.6%

Expected volatility in 2025, 2024 and 2023, was based on the volatility of the Company and comparable peer group companies, while in prior periods expected volatility was based on an evaluation of the historical volatilities of comparable listed biotech-companies only. The expected life is based on Management's best estimate of when the options will be exercised. The risk-free interest rate is based on the yield on US Government bonds depending on whether the exercise price is in euros or in US dollars. The expected dividend yield is zero considering the stage of the Company.

Research and development expenditures

Research and development expenses are currently not capitalized but are expensed because the criteria for capitalization are not met, see Note 2.16 and Note 3 to our consolidated financial statements included elsewhere in this Annual Report. At each balance sheet date, we estimate the level of services performed by the vendors and the associated costs incurred for the services performed. Although we do not expect the estimates to be materially different from amounts actually incurred, the understanding of the status and timing of services performed relative to the actual status and timing of services performed may vary and could result in reporting amounts that are too high or too low in any particular period.

B. Liquidity and capital resources

Since inception, we have incurred significant operating losses. We incurred losses of €175.7 million during the year ended December 31, 2025 and €134.2 million during the year ended December 31, 2024. Since inception, we have not generated any revenues or net cash flows from sales. We will not receive any revenues or net cash flows from sales until we successfully develop a product candidate, obtain regulatory approval and successfully commercialize it. There is no assurance that we will be able to do so.

To date, we have relied on the issuance of equity securities and pre-funded warrants to finance our operations and internal growth.

From inception through December 31, 2025, we have raised the following capital:

- issuance of 4,850,000 Common shares raising €0.2 million;
- issuance of 5,242,850 Series A preferred shares raising €14.9 million (net of transaction costs);
- issuance of 3,003,391 Series B-1 preferred shares raising €21.6 million (net of transaction costs);
- issuance of 4,646,756 Series B-2 preferred shares raising €34.2 million (net of transaction costs);
- issuance of 5,826,279 Series C preferred shares raising €67.2 million (net of transaction costs);
- issuance of 9,511,075 ordinary shares raising €146.2 million (net of transaction costs);
- issuance of 593,927 ordinary shares raising €9.3 million (net of transaction costs);
- issuance of 6,951,340 ordinary shares raising €64.1 million (net of transaction costs);

42 [Table of Contents](#)

- issuance of 11,125,000 ordinary shares and 1,375,000 pre-funded warrants raising €261.6 million (net of transaction costs); and
- issuance of 9,562,500 ordinary shares and 500,000 pre-funded warrants raising €160.3 million (net of transaction costs).

On February 5, 2021, the Company became public by listing its ordinary shares on the Nasdaq Stock Exchange. On the same date all Series A preferred shares, Series B and Series C preferred shares were automatically converted to ordinary shares and 9,511,075 ordinary shares were issued. Together with the issuance of new ordinary shares, the par value of each ordinary share was increased from €0.01 to €0.12.

On March 1, 2022, we entered into a sales agreement (the "2022 Sales Agreement") with Leerink Partners LLC (formerly known as SVB Securities LLC), pursuant to which we may sell ordinary shares having an aggregate offering price of up to \$75 million from time to time through Leerink Partners. On April 12, 2024, we terminated the 2022 Sales Agreement and entered into a new sales agreement with Leerink Partners, pursuant to which we may sell ordinary shares having an aggregate offering price of up to \$175 million from time to time through Leerink Partners (the "2024 Sales Agreement"). In April 2024, we filed a Form F-3 ASR Registration Statement (the "F-3 ASR") and prospectus with the Securities and Exchange Commission, allowing us to sell an unspecified amount of its securities. The F-3 ASR was supplemented by a prospectus supplement covering an at-the-market program providing for the sales from time to time of up to \$175 million of its ordinary shares pursuant to the April 2024 Sales Agreement.

As of December 31, 2024, we have sold a total of 593,927 ordinary shares under the Sales Agreement generating total net proceeds of \$9.8 million (€9.3 million), after deducting \$0.3 million (€0.3 million), which was payable to Leerink Partners, LLC as commission in respect of such sales. The Company has not sold any securities under the April 2024 Sales Agreement.

In June, 2023, we sold a total of 6,951,340 ordinary shares, par value €0.12 per share, in a private placement at a purchase price of \$10.07 per ordinary share. The sale generated total proceeds of \$70.0 million (€64.1 million).

During December 2023, we entered into an underwriting agreement with Morgan Stanley & Co. LLC and Leerink Partners LLC as underwriters, pursuant to which we agreed to issue and sell (i) 11,125,000 ordinary shares, par value €0.12 per share and (ii) pre-funded warrants to purchase up to 1,375,000 ordinary shares in an underwritten offering. The Offering closed on December 8, 2023, and we generated net proceeds of \$282.0 million (€261.6 million), after deducting bank fees of \$18.0 million (€16.7 million). In March 2024, the Company received a partial reimbursement for certain of its expenses in connection with the December 2023 offering which have been accounted for in share premium.

In July 2025, the Company entered into an underwriting agreement with Morgan Stanley & Co. LLC and Leerink Partners, LLC as representatives of the underwriters, pursuant to which the Company agreed to issue and sell (i) 9,562,500 ordinary shares, par value €0.12 per share and (ii) pre-funded warrants to purchase up to 500,000 ordinary shares in an underwritten offering. The offering closed on July 24, 2025, and the Company generated net proceeds of €160.3 million (\$188.5 million), after deducting fees and expenses of €10.9 million (\$12.8 million).

The pre-funded warrants were exercised in September 2025 for gross exercise proceeds of €0.004 million (\$0.005 million) and resulted in issuance of 500,000 ordinary shares.

As of December 31, 2025 we held cash and cash equivalents of €291.7 million. Of the cash on hand, €0.1 million relates to guarantees. We do not expect positive operating cash flows in the foreseeable future and remain dependent on additional financing to fund our research and development expenses, general and administrative expenses and financing costs. We believe that the available cash balances are sufficient to execute our operating plan and strategies and to meet the anticipated working capital requirements and settle all expected liabilities for at least twelve months from the issuance date of the consolidated statements of loss and comprehensive loss. Accordingly, the consolidated statements of loss and comprehensive loss have been prepared on a going concern basis.

We have based our estimate on assumptions that may prove to be wrong, and we may use our available capital resources sooner than we currently expect. For example, we may require additional capital resources due to underestimation of the nature, timing and estimated costs of the efforts that will be necessary to complete the development of our product candidates. We may also need to raise additional funds more quickly if we choose to expand our development activities, our portfolio or if we consider acquisitions. Factors that could influence our future capital requirements and the timing thereof include:

- the progress and cost of our discovery and nonclinical development;
- the progress and cost of our clinical trials, including payments of patient cost, clinical investigator cost and payments to CROs that are assisting with our sponsored clinical trials, and other research and development activities;
- the cost and timing of obtaining regulatory approval to commence further clinical trials;
- the costs associated with any future investigator-sponsored clinical trials;
- the cost of filing, prosecuting, defending and enforcing any patent applications, claims, patents and other intellectual property rights;
- the cost and timing of obtaining sufficient quantities of our product candidates for clinical trials by establishing our contracted and/or own production capacities;

43 [Table of Contents](#)

- the costs and expenditures associated with process optimizations and nonclinical and clinical manufacturing;
- the cost and timing to develop suitable formulations and manufacture final product;
- the terms and timing of any collaborative, licensing and other arrangements that we may establish;
- the cost of acquiring or licensing additional products or technologies, if any;
- the cost of preparing for launch and commercialization of our product candidates; and
- the cost of operating as a public company in the United States.

Until such time, if ever, as we can generate substantial product revenues, we expect to finance our cash needs through a combination of public or private equity offerings, debt financings, convertible loans, warrants, collaborations or other means. We may consider raising additional capital to take advantage of favorable market conditions or other strategic considerations even if we have sufficient funds for planned operations.

To the extent that we raise additional funds by issuing and selling equity or equity-linked securities, shareholders will experience dilution. Debt financing, if available, may subject us to financial and other restrictive covenants that limit our ability to engage in activities that we may believe to be in our long-term best interests. Additional financing may not be available on acceptable terms, if at all. Capital may become difficult or impossible to obtain due to poor market or other conditions outside of our control (including wars, regional unrest, pandemics and epidemics). If we are unable to raise additional funds when needed, we may be required to delay, reduce, or terminate some or all of our development programs and clinical trials. We may also be required to sell or license other technologies or our clinical product candidate that we would prefer to develop and commercialize ourselves.

In addition, while we seek to minimize our exposure to third-party losses of our cash and cash equivalents, we hold our balances in a number of large financial institutions. However, these institutions are subject to risk of failure. For example, in March 2023, the Federal Deposit Insurance Corporation was appointed as receiver for Silicon Valley Bank ("SVB"). As of April 2, 2026, none of our cash and cash equivalents are held with SVB. All of our cash and cash equivalents are held with other large financial institutions, and we do not expect further developments with SVB to have a material impact on our cash and cash equivalents balance, expected results of operations, or financial performance for the foreseeable future. However, if there are issues in the wider financial system and if other financial institutions fail, our business and financial condition could be materially affected.

Cash Flows

Comparison for the years ended December 31, 2024 and December 31, 2023

A discussion of our cash flows for the year ended December 31, 2024 as compared to the year ended December 31, 2023 can be found in the section entitled "Item 5. Operating and Financial Review and Prospects—B. Liquidity and Capital Resources—Cash Flows—Comparison of the years ended December 31, 2024 and 2023" in our annual report on form 20-F, filed with the SEC on April 7, 2025.

The following table sets forth our primary sources and uses of our cash and cash equivalents for each of the periods set forth below:

	For the year ended December 31,			
	2025	2024	Change	%
	(in €)			
Net cash flows used in operating activities	(137,073,634)	(120,130,191)	(16,943,443)	14%
Net cash flows used in investing activities	(164,619)	(538,086)	373,467	(69)%
Net cash flows provided by financing activities	160,607,219	2,676,555	157,930,664	5901%
Net increase (decrease) in cash and cash equivalents	23,368,966	(117,991,722)	141,360,688	(120)%
Cash and cash equivalents at beginning of period	280,728,037	391,231,637	(110,503,600)	(28)%
Effect of exchange rate changes	(12,418,115)	7,488,122	(19,906,237)	(266)%
Cash and cash equivalents at end of period	291,678,888	280,728,037	10,950,851	4%

Operating activities

Net cash flows used in operating activities reflect our results for the period adjusted for, among other things, depreciation, unrealized foreign exchange results, share-based compensation arrangements, changes in working capital and accruals.

Net cash used in operating activities was €137.1 million for the year ended December 31, 2025 and primarily consisted of a net loss before taxes of €173.7 million adjusted for share-based compensation of €19.1 million, net foreign exchange losses €11.7 million and finance income of (€0.4) million, an increase in other current assets of €9.9 million and increase in accrued liabilities of €7.1 million and other changes in net working capital.

Financing activities

Net cash flows provided by financing activities increased by €157.9 million from €2.7 million for the year ended December 31, 2024 to €160.6 million for the year ended December 31, 2025.

The net cash provided by financing activities for the year ended December 31, 2025 consisted primarily of the receipt of €160.6 million received from the sale of ordinary shares and pre-funded warrants, offset by transaction costs of €10.9 million.

Net cash provided by financing activities in the year ended December 31, 2024 consisted primarily of the gross proceeds related to the pre-funded warrants that were exercised in January 2024 that resulted in the issuance of 1,375,000 ordinary shares.

Disclosure of contractual obligations

The Group has entered into research and development commitments amounting to a total of €119.2 million as of December 31, 2025 (2024: €109.9 million). The amount for research and development commitments does not include potential milestone fees, sublicense fees, royalty fees, licensing maintenance fees, and reimbursement of patent maintenance costs that we may be required to pay under the BRAIN License.

Under the BRAIN License, up to €8.0 million in aggregate potential milestone payments remain outstanding. In addition, we will be required to pay low to medium single-digit tiered royalties on direct or indirect net sales of licensed products. The royalties that we are required to pay under this agreement may be reduced on a country-by-country and product-by-product basis if sales of a generic version of a product account for 1% or more of the relevant market. We have not included such potential obligations because they are contingent upon the occurrence of future events and the timing and likelihood of such potential obligations are not known with certainty. For further information regarding this agreement and amounts that could become payable in the future under this agreement, please see "ITEM 4. INFORMATION ON THE COMPANY -- B. Business Overview-License Agreement."

Service contracts

The commitments from service contracts mainly result from contracts with nonclinical and clinical CROs and CDMOs.

C. Research and development, patents and licenses, etc.

See "ITEM 4. INFORMATION ON THE COMPANY—B. Business Overview—Intellectual Property."

D. Trend information

For a discussion of trend information, see "ITEM 5. OPERATING AND FINANCIAL REVIEW AND PROSPECTS."

E. Critical accounting estimates

Our consolidated financial statements are prepared in conformity with IFRS, as issued by the IASB. In preparing our consolidated financial statements, we make judgements, estimates and assumptions about the application of our accounting policies which affect the reported amounts of assets, liabilities, revenue and expenses. Our critical accounting judgements and sources of estimation uncertainty are described in Note 2.19 to our consolidated financial statements, which are included elsewhere in this Annual Report.

2.6 Material subsequent events

See Note 23 (Events after the reporting period) to the consolidated financial statements included in chapter 9 of this report (the "Consolidated Financial Statements") for an overview of events which do not need to be discussed in the Company's statutory annual accounts and which might influence the Company's outlook. There are no other events which might influence the Company's outlook and which are not discussed in the statutory annual accounts included in this report.

3. Risk factors

3.1 Summary Risk Factors

The principal risks and uncertainties which the Company faces include the risks and uncertainties summarized in this chapter 3.1. See chapter 3.2 of this report for additional detail and additional risks and uncertainties which the Company faces.

- We have a limited operating history, have generated no revenues to date and have incurred significant losses since our inception. We expect to incur losses over the next several years, will not generate revenues until we are able to commercialize our products and may never achieve profitability, while our net losses are expected to fluctuate significantly.
- If we are unable to raise capital when needed or on acceptable terms, we may need to delay, reduce or terminate our product development programs and may be unable to continue as a going concern and could ultimately go into insolvency.
- Our business and operations may be adversely affected by a variety of events outside our control, including, but not limited to, outbreaks of infectious diseases and geopolitical instability such as the conflict between Russia and Ukraine and the conflict in the Middle East.
- We are heavily dependent on the success of our product candidates deucricitibant immediate-release (IR) capsule and deucricitibant extended-release (XR) tablet, which are in late-stage development. We have released topline data demonstrating the efficacy and safety of deucricitibant for the on-demand treatment of HAE attacks (RAPIDe-1, RAPIDe-2, RAPIDe-3) and proof-of-concept and safety data for the prophylactic treatment of HAE attacks (CHAPTER-1). Ongoing clinical studies include the open-label extension study of deucricitibant for the on-demand treatment of HAE attacks (RAPIDe-2), the pivotal Phase 3 of study of deucricitibant for the prophylactic treatment of HAE attacks (CHAPTER-3) and the open-label extension study of deucricitibant for the prophylactic treatment of HAE attacks (CHAPTER-4). We cannot give any assurance that these product candidates, or any other compounds in development, will successfully complete clinical trials, receive regulatory approval, be commercialized, or be differentiated in the market. If we are unable to successfully commercialize our product candidates, or experience significant delays in doing so, our business, financial condition, results of operations and prospects would be materially adversely affected.
- We may experience setbacks in our clinical trials, including delays in commencing, conducting or completing our clinical trials. Moreover, we have established proof-of-concept for deucricitibant in Phase 2 trials for both treatment and prophylaxis of HAE attacks. We have designed and advanced our future clinical development program based on these results as well as modelling of our results from those trials with additional in vitro and in vivo data and comparisons to published results for other currently available products from different trials. We may not be able to replicate these results or analyses in future clinical trials that assess the endpoints required to obtain regulatory approval or we may have inconclusive or negative results. Any setbacks in our clinical development program could have a material adverse effect on our business, financial condition, results of operations and prospects.
- Clinical trials of our product candidates may not uncover all possible adverse effects that patients may experience.
- There can be no assurance that we will be able to obtain or, if obtained, maintain orphan drug status.
- If we fail to maintain effective internal control over financial reporting, we may not be able to accurately report our financial results or prevent fraud, and as a result, shareholders could lose confidence in our financial and other public reporting, which would harm our business and the trading price of our ordinary shares.
- We and our partners may be subject to new legislation, regulatory proposals and healthcare payor initiatives that may increase our costs of compliance and adversely affect our or our partners' ability to market our products, obtain collaborators and raise capital.
- Manufacturing issues may arise that could increase product and regulatory approval costs or delay commercialization of our products.
- The market opportunities for our product candidates may also be smaller than currently anticipated, lowering our potential revenue.
- If our product candidates achieve marketing approval, we expect that they will be priced at a significant premium over competitive generic products. This may make it difficult for us to achieve our business strategy of using our product candidates in combination with existing therapies or replacing existing therapies with our product candidates.
- Governments and/or pricing authorities, especially in the European Union, often impose strict price and access controls, which may adversely affect our future profitability.
- The insurance coverage and reimbursement status of newly approved products is uncertain. Failure to obtain or maintain adequate coverage and reimbursement for new or current products could limit our ability to market those products and decrease our ability to generate revenue.
- We may become exposed to costly and damaging liability claims, either when testing our product candidates in the clinic or after commercialization; and our product liability insurance may not cover all damages from such claims.

- If third parties on which we depend to conduct our clinical trials do not perform as contractually required, fail to satisfy regulatory or legal requirements or miss expected deadlines, our development program could be delayed with materially adverse effects on our business, financial condition, results of operations and prospects.
- We are dependent on the services of our management and other clinical and scientific personnel, and if we are not able to retain these individuals or recruit additional management or clinical and scientific personnel, our business will suffer.
- We are heavily dependent on third-party service providers to perform critical activities related to the research, development and manufacturing of our product candidates. If these third-party service providers fail to perform, our development program could be delayed with materially adverse effects on our business, financial condition, results of operations and prospects.
- If we are unable to obtain and maintain patent or trade secret protection for any products or product candidates we develop and for our technology, or if the scope of the patent protection obtained is not sufficiently broad, our competitors could develop and commercialize products and technology similar or identical to ours, and our ability to successfully commercialize any product candidates or technology we may develop may be adversely affected. Our competitors may seek or may have already obtained patents that will limit, interfere with or eliminate our ability to make, use, sell, import or otherwise exploit our product candidates, processes or other technologies.
- If we fail to make required payments under the terms of the agreement with BRAIN Biotech AG, or BRAIN (as successor in interest to AnalytiCon Discovery GmbH), pursuant to which we acquired certain of our core intellectual property, BRAIN may exercise remedies that would materially and adversely affect our business and results of operations.
- The market price of our ordinary shares is likely to be highly volatile.
- We do not currently intend to pay dividends on our securities and, consequently, your ability to achieve a return on your investment will depend on appreciation in the price of our ordinary shares.
- We may be a passive foreign investment company, or a PFIC, which could result in adverse U.S. federal income tax consequences to U.S. investors.

3.2 Risk factors

We have a limited operating history, have generated no revenues to date and have incurred significant losses since our inception. We expect to incur losses over the next several years, will not generate revenues until we are able to commercialize our products and may never achieve profitability, while our net losses are expected to fluctuate significantly.

We are a late-stage clinical biopharmaceutical company with a limited operating history upon which you can evaluate our business and prospects. Since inception, we have incurred significant operating losses and have generated no revenues as we focused on our discovery efforts and developing our product candidates. We expect that it will be several years, if ever, before we have a product candidate ready for commercialization. To date, we have financed our operations primarily through sales of equity. We expect to continue to incur significant expenses and increasing operating losses for the foreseeable future. We anticipate that our expenses will increase substantially if and as we:

- continue clinical development of our current product candidates;
- seek to identify additional product candidates and initiate clinical trials for such additional product candidates;
- acquire or in-license other products and technologies or enter into collaboration arrangements with regards to product discovery;
- seek marketing approvals for our product candidates that successfully complete clinical trials;
- establish a sales, commercialization and distribution infrastructure to commercialize any products for which we may obtain marketing approval;
- maintain, expand and protect our intellectual property portfolio;
- hire additional personnel;
- add operational, financial and management information systems and personnel, including personnel to support our product development and planned future commercialization efforts; and
- continue to incur increased costs as a result of operating as a public company.

To become and remain profitable, we must develop and eventually commercialize a product or products with significant market potential. This will require us to be successful in a range of challenging activities, including completing clinical trials of our product candidates, obtaining marketing approval for these product candidates and manufacturing, commercializing and selling those products for which we may obtain marketing approval. We may never succeed in these activities and, even if we do, we may never generate revenues that are significant or large enough to achieve profitability. If we do achieve profitability, we may not be able to sustain or increase profitability on a quarterly or annual basis. Our failure to become and remain profitable would decrease the value of our business and could impair our ability to raise capital, maintain our discovery and nonclinical development efforts, expand our business or continue our operations and may require us to raise additional capital that may dilute the ownership interest of shareholders. A decline in the value of our business could also cause shareholders to lose all or part of their investment.

We will need substantial additional funding to continue our operations. If we are unable to raise capital when needed or on acceptable terms, we may need to delay, reduce or terminate our product development programs and may be unable to continue as a going concern and could ultimately go into insolvency.

We expect our expenses to increase in parallel with our ongoing activities, particularly as we continue our discovery and nonclinical development to identify new clinical candidates and initiate clinical trials of, and seek marketing approval for, our product candidates. In addition, if we obtain marketing approval for any of our product candidates, we expect to incur significant commercialization expenses related to product sales, marketing, manufacturing and distribution. Because the outcome of any clinical trial or preclinical study is highly uncertain, we cannot reasonably estimate the actual amounts necessary to successfully complete the development and commercialization of our product candidates. If we do not have sufficient cash and cash equivalents to fund the completion of the research, nonclinical studies and clinical development of our programs, we will be required to seek a significant amount of additional funds by raising additional equity, convertible financing or non-dilutive financing such as debt financing arrangements, strategic transactions or other means. We may also delay, reduce the scope of, eliminate or divest clinical programs, partner with others or divest one or more of our activities and consider other cost reduction initiatives, such as withholding initiation or expansion of clinical trials or research and slowing down patient recruitment of clinical trials. We may also be required to sell or license to others, technologies or clinical product candidates or programs that we would prefer to develop and commercialize ourselves. In the event we are not able to generate sufficient funds from these measures, we may be unable to continue as a going concern, our business, financial condition and/or results of operations could be materially and adversely affected and we may ultimately go into insolvency.

In addition, even if we believe we have sufficient funds for our current or future operating plans, we may seek additional capital if market conditions are favorable or if we have specific strategic considerations. Our future funding requirements will depend on many factors, including:

- the progress and cost of our discovery and nonclinical development;
- the progress and cost of our clinical trials, including payments of patient cost, clinical investigator cost and payments to Contract Research Organizations ("CROs") that are assisting with our sponsored clinical trials, and other research and development activities;
- the cost and timing of obtaining regulatory approval to commence further clinical trials;
- the costs associated with any future investigator-sponsored clinical trials;
- the cost of filing, prosecuting, defending and enforcing any patent applications, claims, patents and other intellectual property rights;
- the cost and timing of obtaining sufficient quantities of our product candidates for clinical trials by establishing our contracted and/or own production capacities;
- the costs and expenditures associated with process optimizations and nonclinical and clinical manufacturing;
- the cost and timing to develop suitable formulations and manufacture final product;
- the terms and timing of any collaborative, licensing and other arrangements that we may establish;
- the cost of acquiring or licensing additional products or technologies, if any;
- the cost of preparing for launch and commercialization of our product candidates; and
- the cost of operating as a public company in the United States.

There can be no assurance that funding will be available in a timely manner, on favorable terms, or at all, or that such funds, if raised, would be sufficient to enable us to continue to implement our long-term business strategy. Also, general conditions in the global economy, including market volatility or other factors, could adversely impact our ability to access capital as and when needed. If we are unable to obtain sufficient funding in a timely manner or on commercially acceptable terms, we may have to delay, reduce the scope of, eliminate or divest clinical programs, partner with others or divest one or more of our activities, and consider other cost reduction initiatives, such as downsizing our operations, withholding initiation or expansion of clinical trials or research, and slowing down patient recruitment of clinical trials. In the event we are not able to generate sufficient funds, we may be unable to continue as a going concern and our business, financial condition and/or results of operations could be materially and adversely affected and could reduce the price of our ordinary shares and we may ultimately go into insolvency. In addition, any perceived or actual inability by us to finance our clinical development program and other business activities, including as a result of required milestone and royalty payments to third parties, may cause the market price of our ordinary shares to decline.

Raising additional capital may cause dilution to our existing shareholders, restrict our operations or require us to relinquish rights to our product candidates or technologies.

We have and may continue to seek additional funding through a combination of equity offerings, debt financings, collaborations and/or licensing arrangements. To the extent that we raise additional capital through the sale of equity or convertible debt securities, your ownership interest will be diluted, and the terms may include liquidation or other preferences that adversely affect your rights as a holder of our ordinary shares. The incurrence of indebtedness and/or the issuance of certain equity securities could result in increased fixed payment obligations and could also result in certain additional restrictive covenants, such as limitations on our ability to incur additional

debt and/or issue additional equity, limitations on our ability to acquire or license intellectual property rights and other operating restrictions that could adversely impact our ability to conduct our business. In addition, issuance of additional equity securities, or the possibility of such issuance, may cause the market price of our ordinary shares to decline. In the event that we enter into collaborations and/or licensing arrangements in order to raise capital, we may be required to accept unfavorable terms, including relinquishing or licensing to a third-party on unfavorable terms our rights to technologies or product candidates that we otherwise would seek to develop or commercialize ourselves or potentially reserve for future potential arrangements when we might be able to achieve more favorable terms. Additional funding may not be available to us on acceptable terms, or at all. If we are unable to obtain funding on a timely basis, we may be required to significantly curtail one or more of programs or cease operations altogether.

Exchange rate fluctuations could negatively affect our financial condition.

Our consolidated financial statements are presented in euros. We mainly operate via our Dutch and Swiss entities, but we also conduct business in the United States and the United Kingdom. Therefore, we have expenses denominated in U.S. dollars, Swiss Francs and British pound sterling in connection with, among other things, our sponsored clinical trials, purchase of drug product for our clinical trials, process development and the prosecution and maintenance of our intellectual property portfolio. As a result, our business and share price may be affected by fluctuations between the euro and the U.S. dollar, the euro and the Swiss franc, which may have a significant impact on our reported results of operations and cash flows from period to period.

If we fail to maintain effective internal control over financial reporting, we may not be able to accurately report our financial results or prevent fraud, and as a result, shareholders could lose confidence in our financial and other public reporting, which would harm our business and the trading price of our ordinary shares.

Effective internal control over financial reporting is necessary for us to provide reliable financial reports and, together with adequate disclosure controls and procedures, are designed to prevent fraud. Section 404 of the Sarbanes-Oxley Act requires management of public companies to develop and implement internal control over financial reporting and to evaluate the effectiveness thereof. If we identify one or more material weaknesses in our internal control over financial reporting, we will not be able to assert that our internal controls and procedures are effective. A material weakness is a deficiency or a combination of deficiencies in internal control over financial reporting such that there is a reasonable possibility that a material misstatement of our financial statements will not be prevented or detected on a timely basis. In connection with the preparation of our annual financial statements through December 31, 2023, we identified material weaknesses in the design of our internal control over financial reporting, which our management concluded to have been remediated as of December 31, 2024.

We cannot assure you that material weaknesses will not be discovered in the future. If we do not remediate these issues or if we fail to design and operate effective internal controls in the future, it could result in material misstatements in our financial statements and potentially require us to restate our financial statements which may result in the trading value of our ordinary shares being materially and adversely affected.

Our management is required to assess the effectiveness of our internal control over financial reporting on an annual basis pursuant to SOX 404(a). Additionally, our independent registered public accounting firm is required to attest to the effectiveness of our internal control over financial reporting pursuant to SOX 404(b). The rules governing the standards that must be met for management to assess our internal control over financial reporting are complex and require significant documentation, testing and possible remediation. Undetected material weaknesses in our internal controls could lead to financial statement restatements and require us to incur the expense of remediation. Investors may lose confidence in the accuracy and completeness of our financial reports, which could cause the market price of our ordinary shares to decline and also restrict our future access to the capital markets.

We could also be subject to sanctions or investigations by Nasdaq, the SEC or other regulatory authorities.

We operate in many jurisdictions with highly complex and varied tax regimes. Changes in tax rules, new or revised legislation or the outcome of tax assessments and audits could cause a material adverse effect on our results.

We operate in different jurisdictions with highly complex and varied tax regimes. Changes in tax rules, new or revised legislation or the outcome of tax assessments and audits could have a material adverse effect on our results.

We are subject to taxation in the Netherlands, Switzerland, the United States, and other jurisdictions. Our future effective income tax rate may be variable and depend on changes in the level of operating results within various local jurisdictions and changes in the applicable taxation rates of these jurisdictions. If legislators, tax authorities, or government agencies in the jurisdictions in which we operate were to change applicable tax laws and regulations (for example, as a result of the various global, regional and local initiatives to reform the international tax framework, such as the base erosion and profit shifting project undertaken by the Organization for Economic Co-operation and Development and G20 Inclusive Framework and the two-pillar solution to address the tax challenges arising from the digitalization of the economy) or successfully challenge the manner in which our income taxes are currently recognized or calculated or the transfer pricing policies employed by us (including policies set forth in any advance pricing agreements entered into with any taxing authorities), our income tax expense could increase, which would adversely impact our cash flow and profitability.

In addition, tax benefits or benefits from net operating losses accumulated in prior years in some jurisdictions may not be available in the future due to changes in the local jurisdictions or credits on net operating losses no longer available due to either full utilization or expiration of the statute of limitations in such jurisdictions. As a result, our future effective tax rate could increase and/or our benefits from carrying forward net operating losses could affect our deferred tax assets in certain countries in the coming years. The ultimate realization

49 [Table of Contents](#)

of deferred tax assets is dependent upon, among other things, our ability to generate future taxable income that is sufficient to utilize in certain jurisdictions loss carry-forwards or tax credits before their expiration or our ability to implement prudent and feasible tax optimization strategies.

Furthermore, in many of the jurisdictions in which we operate, the tax laws and regulations are very complex and are open to different interpretations and application. The final determination of tax by means of an assessment or an audit could be materially different from our tax provisions and accruals and may negatively impact our financial results.

On December 20, 2021, the OECD published the Global Anti-Base Erosion Model Rules (the "GloBE Rules"), also known as Pillar II. The GloBE Rules aim to impose a global minimum tax of 15% on multinational enterprises with a revenue in excess of €750 million. On December 22, 2021, the European Commission published a legislative proposal for Pillar II (the "EU Pillar II Directive"). The EU Pillar II Directive is largely aligned with the GloBE Rules. Some deviations were introduced to ensure compliance with EU treaties.

On December 15, 2022, the Council of the European Union formally adopted the EU Pillar II Directive. The EU Pillar II Directive aims at consistently implementing among all 27 member states the GloBE Rules. EU Member States had *Income Taxes* to transpose the EU Pillar II Directive into their national laws and will have to apply the Pillar II measures in respect of the fiscal years beginning on or after December 31, 2023. The Netherlands has transposed the EU Pillar II Directive into its national legislation with effect from December 31, 2023, pursuant to the Dutch Minimum Tax Act 2024 (Wet minimumbelasting 2024).

We do not yet meet the revenue threshold for Pillar II of €750 million but (i) should this threshold be reduced or (ii) should our revenue increase, then the application of Pillar II could have a material adverse effect on our business, financial position and results of operations. We will continue to monitor the impact of Pillar II going forward.

Risks Related to the Development and Clinical Testing of Our Product Candidates

We have experienced, and may continue to experience, setbacks in our clinical trials, including as a result of the clinical holds which were lifted in June 2023 and January 2024. We have released topline data demonstrating the efficacy and safety of deucricitabant for the on-demand treatment of HAE attacks (RAPiDe-1, RAPiDe-2, RAPiDe-3) and proof-of-concept and safety data for the prophylactic treatment of HAE attacks (CHAPTER-1). We have designed and advanced our future clinical development program based on these results as well as modelling of our results from those trials with additional in vitro and in vivo data and comparisons to published results for other currently available products from different trials. We may not be able to replicate these results or analyses in future clinical trials that assess the endpoints required to obtain regulatory approval or we may have inconclusive or negative results. Any setbacks in our clinical development programs could have a material adverse effect on our business, financial condition, results of operations and prospects.

Clinical trials are expensive and complex. Each trial can take many years to complete and have uncertain outcomes. Failure of a product can occur at any stage of the testing, including later phases of clinical trials despite having progressed through preclinical and nonclinical studies and early phase clinical trials, for a variety of reasons, such as changes in formulation of the product, differences in patient populations, changes in trial and manufacturing protocols and complexities of larger, multi-center trials, among others. The results from nonclinical studies or early phase clinical trials of a product candidate may not predict the results that will be obtained in later phase clinical trials of the product candidate. We, the FDA or other applicable regulatory authorities may suspend or terminate clinical trials of a product candidate at any time for numerous reasons, including, but not limited to, a belief that subjects participating in such trials are being exposed to unacceptable health risks or adverse side effects, or other adverse experiences or findings. For instance, in August 2022, we announced that the FDA has placed clinical holds on our clinical trials of deucricitabant in the U.S. under two Investigational New Drug, or IND, applications for the treatment of HAE (on-demand and prophylactic) based on its review of nonclinical data. The clinical hold letters stated that the nonclinical observations were unlikely due to B2 receptor antagonism, the primary mechanism of action of our compound. However, the FDA requested that we conduct an additional long-term rodent toxicology study and update the investigator's brochure. Following review of data from a preplanned interim analysis of the ongoing 26-week nonclinical rodent study, the FDA lifted the clinical hold on the IND application for deucricitabant for the on-demand treatment of HAE in June 2023. In January 2024, the FDA lifted the clinical hold on the IND application for deucricitabant for the prophylactic treatment of HAE attacks following review of the full data set from the completed 26-week rodent toxicology study. While the clinical hold was lifted, there can be no assurance that we will not encounter similar challenges or delays in the future or that these delays or challenges will not have a material adverse impact on our business, financial condition, results of operation and prospects.

Even once clinical trials are successful, before granting approval to any product candidate, regulatory authorities can request additional clinical trials, including with larger patient numbers, find deficiencies in the manufacturing processes or facilities upon which we rely and change their approval policies or regulations or their prior guidance to us during clinical development in a manner that renders our clinical data insufficient for approval. We have, and may continue to experience numerous setbacks during, or as a result of, the clinical trial process that could delay or prevent the commencement, conduct and completion of clinical trials or the commercialization of our current and any future programs, such as:

- delays in reaching a consensus with regulatory agencies on the design or implementation of our clinical trials, including with respect to our strategy for sharing Phase 1 and Phase 2 data between IR and XR programs and designs for improving the efficiency of our clinical development path;
- delays in obtaining regulatory approval or ethics committee approval to commence a clinical trial;

- delays in reaching agreement on acceptable terms with prospective contract research organizations, or CROs, and clinical trial sites;
- failure of CROs to adequately supervise investigators;
- failure to recruit sufficient investigators or recruit and enroll sufficient subjects for our clinical trials in a timely manner or at all, including due to (i) pandemics and (ii) geopolitical tensions;
- delay or failure in having subjects complete a trial or return for post-treatment follow-up, including due to (i) pandemics and (ii) geopolitical tensions;
- failure to obtain and maintain the required institutional review board, or IRB, or ethics committee approval at each clinical trial site;
- clinical sites or investigators deviating from trial protocol or dropping out of a trial;
- lack of adequate funding to continue a clinical trial;
- delays in sufficiently developing, characterizing or controlling a manufacturing process suitable for advanced clinical trials;
- clinical trials of our product candidates producing negative or inconclusive results, which may result in our deciding, or regulators requiring us, to conduct additional clinical trials or abandon product development programs; or
- failure of ourselves or any third-party manufacturers, contractors or suppliers to comply with regulatory requirements, maintain adequate quality controls, or be able to provide sufficient product supply to conduct and complete clinical trials of our product candidates.

Before commencing clinical trials, we are required to apply to country-level regulators before opening sites in their countries. If we are not able to timely receive their approval or enroll patients at sites in other countries, we may not be able to complete clinical trials on our anticipated timelines.

Moreover, principal investigators for our clinical trials may serve as scientific advisers or consultants to us from time to time and receive compensation in connection with such services. Under certain circumstances, we may be required to report some of these relationships to the FDA or comparable foreign regulatory authorities. The FDA or comparable foreign regulatory authority may conclude that a financial relationship between us and a principal investigator has created a conflict of interest or otherwise affected interpretation of the study. The FDA or comparable foreign regulatory authority may therefore question the integrity of the data generated at the applicable clinical trial site and the utility of the clinical trial itself may be jeopardized. This could result in a delay in approval, or rejection, of our marketing applications by the FDA or comparable foreign regulatory authority, as the case may be, and may ultimately lead to the denial of marketing approval of one or more of our product candidates.

If we suffer any material delays, negative results or other setbacks in our clinical trials or nonclinical studies or if any of our clinical trials are put on clinical hold or terminated, we may incur increased costs or be unable to continue development of deucricitibant, including our product candidates IR and XR, which could have a material adverse effect on our business, financial condition, results of operations and prospects.

We are heavily dependent on the success of our product candidates deucricitibant immediate-release (IR) capsule and deucricitibant extended-release (XR) tablet, which are in late-stage development. We have released topline data demonstrating the efficacy and safety of deucricitibant for the on-demand treatment of HAE attacks (RAPiDe-1, RAPiDe-2, RAPiDe-3) and proof-of-concept and safety data for the prophylactic treatment of HAE attacks (CHAPTER-1). Ongoing clinical studies include the open-label extension study of deucricitibant for the on-demand treatment of HAE attacks (RAPiDe-2), the pivotal Phase 3 of study of deucricitibant for the prophylactic treatment of HAE attacks (CHAPTER-3) and the open-label extension study of deucricitibant for the prophylactic treatment of HAE attacks (CHAPTER-4). If we are unable to successfully commercialize our product candidates, or experience significant delays in doing so, our business, financial condition, results of operations and prospects would be materially adversely affected.

We do not have any drugs that have received regulatory approval and may never be able to develop marketable products. We expect that a substantial portion of our foreseeable efforts will be devoted to filing the NDA application in the U.S. in 2026 and development of our XR product candidate and as a result, our business currently depends heavily on the successful development, regulatory approval and commercialization of these product candidates. To date we have data from preclinical studies, Phase 1 clinical studies in healthy volunteers, and Phase 2 studies in people living with HAE of deucricitibant for both treatment and prophylaxis of HAE attacks, and a Phase 3 study in people living with HAE of deucricitibant for the treatment of HAE attacks. However, we have not conducted a head-to-head comparison of icatibant or any other drug candidate to deucricitibant in a clinical trial. We have compared the published data for icatibant to data from our Phase 1, Phase 2 and Phase 3 randomized clinical trials (RAPiDe-1 and RAPiDe-3), and Phase 2/3 long-term extension study (RAPiDe-2) of deucricitibant IR. Accordingly, the value of comparisons to icatibant in this Annual Report may be limited because they are not derived from a head-to-head trial, and they are from trials that were conducted under different protocols at different sites and at different times. Without head-to-head data, we will be unable to make comparative claims for our product candidates, if approved. Future clinical trials may not confirm our analyses to date. The development of deucricitibant XR has been and will continue to be a time-consuming and costly process and may leave us with insufficient resources to advance other programs and product candidates. We cannot be certain that any deucricitibant-containing product candidate, including IR and XR, will receive regulatory approval or be successfully commercialized, even if we receive regulatory approval.

51 [Table of Contents](#)

The research, testing, manufacturing, safety, efficacy, labeling, approval, sale, advertising promotion, commercialization and distribution of our product candidates are, and will remain, subject to comprehensive regulation by the FDA in the United States, the European Union and the European Medicines Agency or EMA in Europe and regulatory authorities in other countries, with regulations differing from country to country. We will not be permitted to market our drug candidates in the United States or Europe until we receive approval of a New Drug Application, or NDA, from the FDA or a marketing authorization, or MA, from the European Commission (based on the positive opinion of the EMA), respectively. At the time of this Annual Report, we have not submitted any marketing authorization applications for any of our product candidates. NDAs and MAs must include extensive nonclinical and clinical data and supporting information to establish the drug candidate's safety and effectiveness for each desired indication. The nonclinical and clinical development of our product candidates is susceptible to the risk of failure inherent at any stage of drug development, including failure to demonstrate efficacy or safety; the occurrence of adverse events that are severe or medically or commercially unacceptable; our or our partners' failure to comply with trial protocols, applicable regulatory requirements, and industry standards; or a determination by the FDA or any comparable foreign regulatory authority that a product candidate may not continue development or be approved in accordance with our development plans or at all. We cannot guarantee that any nonclinical studies and clinical trials will be conducted as planned or completed on schedule, if at all, or that the results of such trials will be sufficient to support regulatory approval for our product candidates. Failure to obtain regulatory approval for any of our product candidates IR and XR or any other product candidate in the United States, Europe or other jurisdictions will prevent us from commercializing and marketing these products in such jurisdictions.

Even if we were to successfully obtain approval from the FDA, EMA and comparable foreign regulatory authorities for our product candidates, any approval might contain significant limitations related to use restrictions for specified age groups, warnings, precautions or contraindications or may be subject to burdensome post-approval study or risk management requirements. We may also be limited in our ability to advertise, promote and/or market our product candidates in a way that successfully differentiates them in the market. For example, we may not be able to position our product as safer, more effective, more convenient or better for a patient's quality of life. Furthermore, we will still need to develop a commercial infrastructure, or otherwise develop relationships with collaborators to commercialize, establish a viable pricing structure and obtain coverage and adequate reimbursement from third-party payors, including government healthcare programs. If we, or our collaborators, are unable to successfully commercialize any product candidate, we may not be able to generate sufficient revenue to continue our business.

Our business and operations, including ongoing and planned clinical trials, may be adversely affected by a variety of events outside our control, including pandemics, epidemics or outbreaks of infectious diseases, and geopolitical instability, such as the conflict between Russia and Ukraine and the conflict in the Middle East.

A wide variety of events beyond our control, including natural or man-made disasters, power shortages, fires, extreme weather conditions, pandemics, epidemics or outbreaks of infectious diseases, political instability or other events could disrupt our business or operations or those of our development partners, manufacturers, regulators or other third parties with whom we conduct business now or in the future. These events may cause businesses and government agencies to be shut down, supply chains to be interrupted, slowed, or rendered inoperable, and individuals to become ill, quarantined, or otherwise unable to work and/or travel due to health reasons or governmental restrictions. The spread of variants of infectious diseases may interrupt, or delay, our clinical trial activities, regulatory reviews, manufacturing activities and supply chain. Infectious disease pandemics may delay enrollment in our clinical trials due to prioritization of hospital resources towards the outbreak or other factors, and some patients may be unwilling to enroll in our trials or be unable to comply with clinical trial protocols if quarantines impede patient movement or interrupt healthcare services, which would delay our ability to conduct clinical trials or release clinical trial results and could delay our ability to obtain regulatory approvals and commercialize our product candidates. In addition, even with our distributed operations, employee vaccinations and our observation of social distancing measures, there remains the possibility that key personnel may become ill or are otherwise unable to work, which could affect our operations.

Moreover, unforeseen global events, such as the armed conflict between Russia and Ukraine and the conflict in the Middle East, could adversely impact our business and operations. The invasion of Ukraine and the conflict in the Middle East and the retaliatory measures that have been taken, or could be taken in the future, by the United States, NATO, and other countries have created global security concerns that could result in regional conflicts and also adversely affect our ability to conduct ongoing and future clinical trials of our product candidates. For example, our studies include a significant number of patients in Germany, Poland and Bulgaria, and we have a patient in Israel. A further escalation of the conflict in Ukraine and the Middle East may potentially impact our ability to complete our ongoing and planned clinical trials in these countries on a timely basis, or at all. Clinical trials in these countries could be suspended or terminated, and we may be prevented from obtaining data on patients already enrolled at affected sites. Our ability to conduct clinical trials in these regions may also become restricted under applicable sanctions laws, which may require us to identify alternative trial sites. Any of the foregoing could impede the execution of our clinical development plans, which could materially harm our business.

Disruptions at the FDA, European Medicines Agency or EMA and other government agencies, including as a result of the new administration, funding shortages or global health concerns could hinder their ability to hire, retain or deploy key leadership and other personnel, or otherwise prevent new or modified products from being developed, cleared or approved or commercialized in a timely manner or at all, which could negatively impact our business.

The ability of the FDA, EMA and other comparable government agencies to review and clear or approve new products can be affected by a variety of factors, including government budget and funding levels, statutory, regulatory, and policy changes including policy changes coming from the new administration, ability to hire and retain key personnel and accept the payment of user fees, and other events that may otherwise affect their ability to perform routine functions. Government funding of government agencies that fund research and development activities is subject to the political process, which is inherently fluid and unpredictable. Disruptions at the FDA, EMA and other agencies may also slow the time necessary for new drugs or modifications to cleared or approved drugs to be reviewed and/or approved by necessary government agencies, which would adversely affect our business. If a prolonged government shutdown occurs, or

if global health concerns prevent the FDA, EMA or other regulatory authorities from conducting their regular inspections, reviews, or other regulatory activities, it could significantly impact the ability of the FDA, EMA or other regulatory authorities to timely review and process our regulatory submissions, which could have a material adverse effect on our business.

We may not be able to design and develop an extended-release formulation.

Our current strategy includes developing an extended-release formulation for the deucricitbant prophylactic indication (XR). To date, we have studied prospective extended-release formulation in clinical studies in healthy volunteers and in patients with acquired angioedema due to C1INH deficiency to assess the PK, safety and efficacy of the final extended-release formulation. In the ongoing HAE prophylactic clinical studies, we may not observe the desired PK, safety and efficacy profile with the XR formulation.

We have filed patent applications covering the specific formulation developed, as well as its use for the treatment of HAE, which have been allowed in certain countries. There can, however, be no assurance that such an extended-release formulation will be successfully developed in a timely manner, that adequate patent protection can be obtained or that any such formulation would provide us with a commercial advantage. If we are unable to develop this extended-release formulation on our own, we may need to in-license patented technology to do so. Many third parties have patents covering technologies and manufacturing processes needed to develop and make extended-release formulations and there can be no assurance that we would be able to obtain rights to such patents on attractive financial terms, if at all.

If we experience delays or difficulties in the enrollment of patients in clinical trials, our receipt of necessary regulatory approvals could be delayed or prevented and expenses for development of our product candidates could increase.

We may not be able to initiate or continue clinical trials for our product candidates if we are unable to locate and enroll a sufficient number of eligible patients to participate in these trials to demonstrate safety and efficacy. We do not know whether planned or ongoing clinical trials will enroll subjects in a timely fashion, require redesign of essential trial elements or be completed on our projected schedule. In particular, because we are focused on patients with HAE, which is a rare disease, our ability to enroll eligible patients in trials may be limited or may result in slower enrollment than we anticipate. In addition, competitors have ongoing clinical trials for product candidates being studied for the same indications as our product candidates, and patients who would otherwise be eligible for our clinical trials may instead enroll in clinical trials of our competitors' product candidates. Patient enrollment can also be affected by a number of other factors including:

- the eligibility criteria for the study in question;
- the perceived risks and benefits of the product candidate under study;
- the efforts to facilitate timely enrollment in clinical trials;
- the availability of existing or experimental treatments affecting our ability to recruit patients;
- the inability to identify and maintain a sufficient number of trial sites, many of which may already be engaged in other clinical trial programs, including some that may be for the same disease indication;
- the patient referral practices of physicians;
- the proximity and availability of clinical trial sites for prospective patients;
- any delays and difficulties in enrollment due to the spread of an infectious disease;
- ambiguous or negative interim results of our clinical trials, or results that are inconsistent with earlier results;
- feedback from the FDA, EMA and any comparable foreign regulatory authority, data safety monitoring boards, or a comparable foreign regulatory authority, or results from earlier stage or concurrent nonclinical studies and clinical trials, that might require modifications to the protocol;
- decisions by the FDA, EMA and any comparable foreign regulatory authority, or recommendations by data safety monitoring boards, to suspend or terminate clinical trials at any time for safety issues or for any other reason; and
- unacceptable risk-benefit profile, perceived or actual, or unforeseen safety issues or adverse effects.

Our inability to enroll a sufficient number of patients for our clinical trials would result in significant delays, may result in increased development costs for our product candidates, and could also require us to abandon one or more clinical trials altogether, any of which could cause a material adverse effect on our business, financial position and results of operations.

Clinical trials of our product candidates may not uncover all possible adverse effects that patients may experience.

Clinical trials are conducted in a limited sample of the patient population for the disease or condition under study; the actual patient population may have significantly more variability than the clinical trial subjects. In addition, clinical trials are, by design, limited with respect to the number of subjects, the duration of exposure to the product candidate, and by inclusion and exclusion criteria to a restricted composition of the overall patient population. As a result of such limitations, we cannot be sure that all side effects of our product

candidates may be uncovered during our clinical trials or that a complete safety profile of our product candidates will be identified. Further, even larger clinical trials may not identify rare serious adverse effects, or the duration of such studies may not be of sufficient length to identify when those events may occur. There have been other products that have been approved by the regulatory authorities but for which safety concerns have been uncovered following approval. Such safety concerns have led to labeling changes, the imposition of other regulatory requirements (e.g., Risk Evaluation and Mitigation Strategy or REMs, or post-authorization safety studies, or PASS) or withdrawal of products from the market, and any of our product candidates may be subject to similar risks.

Although to date we have not seen evidence of significant safety concerns with our product candidates currently in clinical trials, patients treated with our products, if approved, may experience adverse reactions and it is possible that the FDA or other regulatory authorities may ask for additional safety data as a condition of, or in connection with, our efforts to obtain approval of our product candidates. If safety events occur or are identified after our product candidates reach the market, we may, or regulatory authorities may require us to amend the labeling of our products, institute a REMs or PASS, recall our products or even withdraw approval for our products.

Clinical development is a lengthy and expensive process with an uncertain outcome, and results of earlier studies and trials as well as data from any interim analysis of ongoing clinical trials may not be predictive of future trial results. Clinical failure can occur at any stage of clinical development.

Clinical testing is expensive and can take many years to complete, and its outcome is inherently uncertain. Failure can occur at any time during the clinical trial process. Although product candidates may demonstrate promising results in early clinical (human) trials and nonclinical (animal) studies, they may not prove to be safe or effective in subsequent clinical trials. For example, the results of animal studies may not accurately predict human experience.

In addition, the studies and trials of other products with similar mechanisms of action to our product candidates may not be predictive of our clinical trial results. There can be significant variability in safety and/or efficacy results between different trials of the same product candidate due to numerous factors, including changes in trial protocols, differences in composition of the patient populations, adherence to the dosing regimen and other trial protocols and the rate of dropout among clinical trial participants. Product candidates in later phase clinical trials may fail to show the desired safety and efficacy traits despite having progressed through nonclinical studies and earlier clinical trials. In addition to the safety and efficacy trials of any product candidate, clinical trial failures may result from a multitude of factors including flaws in trial design, dose selection, placebo effect and patient enrollment criteria. A number of companies in the pharmaceutical industry have suffered significant setbacks in advanced clinical trials due to lack of efficacy or adverse safety profiles, notwithstanding promising results in earlier trials, and it is possible that our product candidates will as well which may have an adverse effect on our business and the value of the ordinary shares.

We may not be able to conduct, or contract others to conduct, animal testing in the future, which could harm our research and development activities.

Certain laws and regulations relating to drug development require us to test our product candidates in pre- and nonclinical animals before initiating clinical trials involving humans. Pre- and nonclinical animal testing activities have been the subject of controversy and adverse publicity. Animal rights groups and other organizations and individuals have attempted to stop animal testing activities by pressing for legislation and regulation in these areas and by disrupting these activities through protests and other means. To the extent the activities of these groups are successful, our research and development activities may be interrupted or delayed.

Risks Related to Regulatory Approval of Our Clinical Development Programs and Our Product Candidates

Clinical development is subject to extensive regulation, which can be costly and time-consuming to comply with, and we may not obtain approvals for performing clinical trials or for marketing any of our product candidates.

We are not permitted to conduct clinical trials with or market any product candidate until we obtain authorization from the appropriate regulatory authorities. We must obtain authorization for conducting clinical trials with any product candidate and for marketing any product candidate from the appropriate regulatory authority of each jurisdiction in which we wish to perform clinical trials or market our product candidates.

Since the 1990s, many companies have tried but failed to discover oral B2 antagonists, as the bradykinin B2 receptor proved to be a difficult target for the development of orally available antagonists. Current treatment guidelines also recommend against the use of the traditionally used oral HAE medications, such as antifibrinolytics (tranexamic acid or epsilon aminocaproic acid), due to limited efficacy. As our product candidates are based on novel technologies, it is difficult to predict the time or costs associated with the regulatory approval process or be certain of our ability to successfully commence, conduct, and complete clinical development, or obtain the necessary regulatory and reimbursement approvals required for the commercialization of our product candidates IR and XR. As discussed under “—Risks Related to the Development and Clinical Testing of Our Product Candidates—We may experience setbacks in our clinical trials, including delays in commencing, conducting or completing our clinical trials, as well as inconclusive or negative results, all of which could have a material adverse effect on our business, financial condition, results of operations and prospects,” we or our partners may experience any number of unfavorable outcomes during or as a result of nonclinical studies and clinical trials which could delay or prevent regulatory approval of our product candidates, or negatively impact our management’s credibility, our value and our operating results.

We have invested substantial time and resources in preclinical and nonclinical studies, clinical trials, manufacturing and the preparation and submission of various regulatory applications without any assurance that we will obtain regulatory approval or recoup our investment and may continue to do so. The FDA and other regulatory authorities exercise substantial discretion with respect to the

development and approval of drug product candidates. The number, size and design of nonclinical studies and clinical trials that will be required for regulatory approval will vary depending on the program, the primary indication and the specific regulations and guidance documents applicable to any particular program. The FDA and other regulatory authorities can delay, limit or deny (i) clinical trial development (e.g., placing a clinical trial under clinical hold) and (ii) approval of a program for many reasons, including:

- manufacturing related issues or concerns;
- concerns relating to the product candidate's safety or efficacy;
- concerns relating to the design, control or conduct of nonclinical studies and clinical trials including the use of placebo or active controls in blinded studies;
- negative or ambiguous results of any nonclinical study or clinical trial;
- concerns relating to the sufficiency of clinical trial results;
- the failure of more advanced clinical results to confirm positive results from preclinical studies or earlier clinical trials; or
- the development or observation of unexpected safety issues, adverse events or adverse side effects.

Should any of these or other factors affecting our development programs or product candidates occur, regulatory approval of our product candidates could be denied, delayed or have conditions placed upon it. Failure to obtain regulatory approval in a timely manner, in a limited manner or at all would have a material adverse effect on our business, financial condition, results of operations or prospects.

Additionally, effective as of January 31, 2020, the United Kingdom withdrew from the European Union, a process referred to as "Brexit". As a result of Brexit, commercializing our product candidates in the United Kingdom would require us to obtain separate marketing approvals from the Medicines and Healthcare products Regulatory Agency, or the MHRA, instead of single marketing approvals obtained from the European Commission which, in turn, are based on the positive opinion of the European Medicines Agency, or the EMA. With significant regulatory oversight shifted from the EMA to the MHRA, and the MHRA having limited capacities and resources, obtaining marketing approvals for our product candidates in the United Kingdom may take longer than it would take in the European Union. Any delay in obtaining, or an inability to obtain, any marketing approvals, as a result of Brexit or otherwise, would prevent us from commercializing our product candidates in the United Kingdom and restrict our ability to generate revenue and achieve and sustain profitability. If any of these outcomes occur, we may be forced to restrict or delay efforts to seek regulatory approval in the United Kingdom for any of our product candidates, which could significantly and materially harm our business.

There can be no assurance that we will be able to maintain orphan drug status.

Under the Orphan Drug Act, the FDA may designate a product as an orphan drug if it is intended to treat a rare disease or condition, defined as a patient population of fewer than 200,000 in the U.S., or a patient population greater than 200,000 in the U.S. where there is no reasonable expectation that the cost of developing the drug will be recovered from sales in the U.S. In the European Union, after a recommendation from the EMA's Committee for Orphan Medicinal Products, the European Commission grants orphan drug designation to promote the development of products that are intended for the diagnosis, prevention or treatment of a life-threatening or chronically debilitating condition either affecting not more than five in 10,000 persons in the European Union or when, without incentives, it is unlikely that marketing of the medicine would generate sufficient returns to justify the investment needed for its development. Orphan drug exclusivity confers market exclusivity, subject to certain limitations, upon the first product to receive marketing approval by the relevant regulatory authority for the jurisdiction and entails the right to market exclusively the product for the specified indication, during a maximum of ten years for the European Union and during a period of seven years in the United States. The period of exclusivity in the European Union may be reduced to six years if, at the end of the fifth year, the product no longer meets the criteria for orphan drug designation if, among other things, it is established that the product is sufficiently profitable not to justify market exclusivity.

On March 18, 2022, the FDA granted orphan drug designation to PHA121 (deucricitibant), the active ingredient in our IR and XR product candidates for treatment of bradykinin-mediated angioedema. Even though we have obtained orphan drug exclusivity for deucricitibant in the U.S., an approval may be granted to other applicants of a similar product for the same indication if we are unable to supply sufficient quantities of the product, we consent to such an approval, or if the product of a second applicant is deemed to be clinically superior to our product. Changes to the current regulatory frameworks governing orphan drugs may also impact existing and future market exclusivities provided as a result of orphan drug designation. Even if we were to succeed in maintaining market exclusivity for products through orphan drug status, the orphan drug regulations would not preclude competitors from developing or marketing different products for the same indications to which our programs are directed, or from independently developing versions of our products for different indications. Further, we may lose orphan drug exclusivity if the FDA determines that the request for designation was materially defective. If we fail to obtain or maintain orphan exclusivity for deucricitibant or any future products, or if the commercial value of market exclusivity is diminished, our competitive position or financial and commercial prospects could be materially adversely affected.

If we fail to comply with ongoing regulatory obligations and restrictions following regulatory approval of any product candidate, regulatory authorities may take enforcement action against us, for example, any regulatory approval granted could be withdrawn or revoked and sale of any products could be suspended, or financial penalties could be imposed.

If any of our product candidates are approved for commercialization by the FDA or another regulatory authority, we would be subject to extensive regulatory requirements over, among other things, product manufacturing, testing, labeling, packaging, storage, advertising, promotion, marketing, distribution, export, import, adverse event reporting and record keeping. These requirements include submissions of safety and other post-commercialization information and reports, drug establishment registration and drug listing requirements, current

Good Manufacturing Practices, or cGMP, relating to manufacturing, quality control, quality assurance and corresponding maintenance of records and documents. In addition, we would be subject to other requirements regarding the distribution of drug samples to physicians. We and our suppliers, Contract Development and Manufacturing Organization ("CDMOs") and contract testing laboratories would also be subject to inspection by the FDA or other regulatory authorities to determine compliance with these requirements. In addition, facilities in the European Union that manufacture any of our product candidates must be licensed by the relevant regulatory authorities. In the United States, there are also certain state requirements with respect to drug manufacturing and distribution with which we must comply.

The FDA, or other regulatory authorities, may also impose significant limitations on the use or marketing of our approved product candidates, which could reduce the potential market for any products. The FDA and other regulatory authorities closely regulate the post-approval advertising, promotion, and commercialization of drugs to ensure drugs are marketed only for the approved indications and in accordance with the provisions of the approved labeling. The FDA imposes stringent restrictions on manufacturers' communications regarding use of their products and if we promote our products beyond their approved indications or in other ways that violate FDA requirements, we may be subject to enforcement action for, among other things, off-label promotion. In the EU, promotion of prescription-only drugs to the general public as well as off-label promotion are strictly prohibited and can result in significant fines and reputational damage. For the United States, alleged, or potential violations of the Federal Food, Drug, and Cosmetic Act relating to the promotion of prescription drugs may lead to investigations alleging violations of federal and state health care fraud and abuse laws, as well as state consumer protection laws. Advertising, promotion, and marketing activities may also give rise to litigation by competitors.

The FDA, or other regulatory authorities, may also impose requirements for costly post-commercialization studies or clinical trials and surveillance to monitor the safety or efficacy of an approved drug. Previously unknown problems with the drug may result in restrictions on the commercialization of the product and could include withdrawal of the drug from the market.

In addition, as discussed under "—Risks Related to the Development and Clinical Testing of Our Product Candidates—We and our partners may be subject to new legislation, regulation, regulatory proposals and healthcare payor initiatives that may increase our costs of compliance and adversely affect our or our partners' ability to market our products, obtain collaborators and raise capital," new statutory requirements or additional regulations or initiatives may be enacted. If we are slow or unable to adapt to changes in existing requirements or the adoption of new requirements or policies, or if we are not able to maintain regulatory compliance, we may lose any marketing approval that we may have obtained and we may not achieve or sustain profitability, which would adversely affect our business, prospects, financial condition and results of operations. Failure to comply with the requirements of the FDA and other applicable regulatory authorities may also subject us to administrative or judicially imposed sanctions, including civil and criminal penalties, injunctions, product seizure or recall, import bans, restrictions on the conduct of our operations, total or partial suspension of production and refusal to approve a pending NDA, and financial penalties. If we are subject to any of these sanctions, our competitive position or financial and commercial prospects could be materially adversely affected.

We and our partners may be subject to new legislation, regulation, regulatory proposals and healthcare payor initiatives that may increase our costs of compliance and adversely affect our or our partners' ability to market our products, obtain collaborators and raise capital.

In various jurisdictions, including the United States, there have been and continue to be a number of legislative and regulatory changes and proposed changes regarding the healthcare system that could prevent or delay marketing approval of our product candidates, subject us to more stringent drug labeling and post-commercialization testing or restrict or regulate post-approval activities and affect our ability, or the ability of our future collaborators, to profitably sell any product candidates for which we obtain marketing approval.

Among policy makers and payors, there is significant interest in promoting changes in healthcare systems with the stated goals of containing healthcare costs, improving quality and/or expanding access. In the United States, there has been heightened governmental scrutiny recently over the manner in which drug manufacturers set prices for their marketed products. For instance, recently, President Biden signed into law the Inflation Reduction Act of 2022, or IRA, which included several measures intended to lower the cost of prescription drugs and limit out-of-pocket spending, including by requiring drug manufacturers to pay rebates to Medicare if they increase prices faster than inflation for drugs used by Medicare beneficiaries.

Further, in the United States, the Patient Protection and Affordable Care Act, as amended by the Health Care and Education Reconciliation Act, collectively, the ACA, enacted in 2010, has had a significant impact on the healthcare industry. The ACA increased federal oversight of private health insurance plans and included a number of provisions designed to reduce Medicare expenditures and the cost of health care generally, to reduce fraud and abuse, and to provide access to increased health coverage. Since its enactment there have been judicial, Presidential and Congressional challenges to certain aspects of the ACA, and we expect there will be additional challenges and amendments to the ACA. In addition, the Trump administration took several executive actions, including the issuance of several executive orders, that could impose significant burdens on, or otherwise materially delay, the FDA's ability to engage in routine regulatory and oversight activities such as implementing statutes through rulemaking, issuance of guidance, and review and approval of marketing applications. An under-staffed FDA could result in delays in the FDA's responsiveness or in its ability to review submissions or applications within the established Prescription Drug User Fee Act time frames, issue regulations or guidance, or implement or enforce regulatory requirements in a timely fashion or at all. In the coming years, legislative and regulatory changes could be made to governmental health programs that could significantly impact pharmaceutical companies and the success of our product candidates. As such, we cannot predict what effect the ACA or other healthcare reform initiatives that may be adopted in the future will have on our business.

Further, there has been heightened governmental scrutiny in the United States of pharmaceutical pricing practices in light of the rising cost of prescription drugs. At the federal level, such scrutiny has resulted in several recent congressional inquiries and proposed and

enacted federal and state legislation designed to, among other things, bring more transparency to product pricing, review the relationship between pricing and manufacturer patient programs, and reform government program reimbursement methodologies for products.

The One Big Beautiful Bill Act, which was enacted in July 2025, imposes significant reductions in the funding of the Medicaid program. Such reductions are expected to decrease the number of persons enrolled in Medicaid and reduce the services covered by Medicaid, which could adversely affect sales of commercialized products.

The Trump administration is pursuing a two-fold strategy to reduce drug costs in the U.S. President Trump has threatened to impose significant tariffs on pharmaceutical manufacturers that do not adopt pricing policies such as most favored nation pricing, which would tie the price for drugs in the U.S. to the lowest price in a group of other countries (See Business Overview – *U.S. Healthcare Reform* for further discussion). In response, multiple manufacturers have reportedly entered into confidential pricing agreements with the federal government. The Trump administration is also pursuing traditional regulatory pathways to impose drug pricing policies, and published two proposed regulations in December 2025, referred to as *Globe and Guard*. If finalized, these regulations would implement mandatory payment models under which manufacturers of eligible drugs would be required to pay rebates to the federal government on a portion of the units of their drugs that are reimbursed by Medicare, with the rebate amount based on most favored nation pricing. While the impact of the *Globe and Guard* proposed regulations, if finalized, cannot yet be determined, it is likely to be significant. Even regulatory proposals or executive actions that are ultimately deemed unlawful could negatively impact the U.S. pharmaceutical sector and our business. In addition, pharmaceutical pricing and marketing has long been the subject of considerable discussion in Congress and among policymakers, and it is possible that Congress could enact additional laws that negatively affect the pharmaceutical industry.

We expect that these healthcare reform measures that may be adopted in the future may result in more rigorous coverage criteria, new payment methodologies and additional downward pressure on the price that we could receive for any approved product. Any reduction in reimbursement from Medicare or other government programs may result in a similar reduction in payments from private payers. The implementation of cost containment measures or other healthcare reforms may prevent us from being able to generate revenue, attain profitability or commercialize any future product candidates, if approved. Any reduction in reimbursement from Medicare or other government programs may result in a similar reduction in payments from private payers, limit patient access, reduce prescribing or require additional discounts, any of which could materially adversely affect our ability to generate revenue, achieve or maintain profitability and successfully commercialize any future products.

In some countries outside the United States, the proposed pricing for a treatment must be approved before it may be lawfully marketed. In addition, in some markets, the pricing of prescription drugs is subject to government control and reimbursement which may in some cases be unavailable. The requirements governing drug pricing vary widely from country to country. There can be no assurance that any country that has price controls or reimbursement limitations for pharmaceutical products will allow favorable reimbursement and pricing arrangements for any of our product candidates that may be approved. Historically, pharmaceutical products launched in the European Union do not follow price structures of the United States and generally tend to have significantly lower prices.

We expect that market access constraints, pricing controls and discounting and other restrictions will become more acute as public and private payers continue to take aggressive steps to control their expenditures. These efforts and other healthcare reform measures that may be adopted in the future may result in more rigorous coverage criteria and additional downward pressure on the price that we receive for any approved product, and any reduction in reimbursement from any government program may result in a similar reduction in payments from private payers. The implementation of cost containment measures or other healthcare reforms may prevent us from being able to generate revenues, attain profitability, or commercialize our product candidates, if approved.

We cannot predict the likelihood, nature or extent of government regulation that may arise from future legislation or administrative action in the United States, the European Union or another jurisdiction, or the effect that any such future legislation or administrative action may have on our business.

Risks Related to Our Operations

If we cannot manufacture our product candidates in sufficient amounts, with CDMOs or ourselves, at acceptable costs and on a timely basis, we may be unable to supply sufficient product candidates for nonclinical studies or clinical trials or to support commercialization of our product candidates, if approved.

We do not own or operate manufacturing facilities and have no plans to build our own clinical or commercial-scale manufacturing capabilities. We cannot ensure that our suppliers will remain in business, have sufficient capacity or supply to meet our needs, or that they will not be purchased by one of our competitors or another company that is not interested in continuing to work with us. If we cannot establish sufficient supply through alternative third-party CDMOs or in our own facilities should we develop these, our ability to conduct the planned and future clinical trials and our plans for commercialization would be materially adversely affected.

In addition, we currently rely on a small number of CDMOs for the production of certain of our product candidates and, as a result, face certain additional risks relating to our manufacturing operations. A single significant disruptive event at the manufacturing operations of one of our CDMOs can have a material adverse effect on our business, prospects, financial condition and results of operations. In addition, one of our CDMOs is located in the United Kingdom and we cannot rule out the possibility of delays in obtaining our product candidates as a result of changes in the governing regulatory framework, including import/export restrictions, due to Brexit. Business interruption insurance may not adequately compensate us for any losses that may occur, and we would have to bear the additional cost of any disruption. For instance, if we were to experience an unexpected loss of supply, or if our CDMOs are unable to meet our demand for our product candidates or their services, we could experience delays in our research and development activities, planned clinical trials or

commercialization of approved products. Finding alternative CDMOs or suppliers of acceptable quality who can deliver appropriate volumes at acceptable cost may be challenging. Moreover, the long transition periods involved in the change of CDMOs and suppliers, if necessary, would significantly delay our clinical trials and the commercialization of our product candidates, if approved.

We will need to work with CDMOs that can meet all applicable FDA and other regulatory authority requirements on an ongoing basis. If the manufacturing process is changed during the course of product development, the FDA or other regulatory authorities could require us to repeat some or all previously conducted trials or conduct additional trials to obtain bridging data, which could delay or impede our ability to obtain marketing approval. If we or our CDMOs are unable to reliably produce and release our product candidates to specifications acceptable to the FDA or other regulatory authorities, we may not obtain or maintain the approvals we need to further develop, conduct clinical trials for, and commercialize such product candidates. Similarly, approval of our product candidates could be delayed or denied if the intended manufacturing site fails to pass the required preapproval inspection. Even if we obtain regulatory approval for any of our product candidates, there is no assurance that either we or our CDMOs will be able to manufacture the approved product to specifications acceptable to the FDA or other regulatory authorities, to produce it in sufficient quantities to meet the requirements for the potential launch of the product, or to meet potential future demand. Any of these challenges could delay completion of clinical trials, require clinical trials to obtain bridging data or the repetition of one or more clinical trials, increase clinical trial costs, delay approval of our product candidates, impair commercialization efforts, increase our cost of goods, and have a material adverse effect on our business, financial condition, results of operations and growth prospects.

We expect that development of our own manufacturing facilities could provide us with enhanced control of material supply for our product candidates for clinical trials and the commercial market. However, we have no experience as a company in developing and operating a manufacturing facility and may never be successful in developing our own manufacturing facility or capability should we decide to do so. In particular, if we do pursue the construction of our own manufacturing facilities, we may not complete construction in a timely manner, if at all. Such facilities would also need to be inspected and approved by the FDA and other regulatory agencies before these facilities can be used to manufacture our product candidates, which may subject us to unforeseen delays in our manufacturing efforts and additional regulatory inspections.

For all of the above reasons, our current and anticipated future dependence upon others for the manufacture of our product candidates or products may adversely affect our future profit margins and our ability to commercialize any products that receive marketing approval on a timely and competitive basis.

Manufacturing issues may arise that could increase product and regulatory approval costs or delay commercialization of our products.

As the manufacturing processes are scaled up, they may reveal manufacturing challenges or previously unknown impurities that could require resolution in order to proceed with our planned clinical trials and obtain regulatory approval for the commercial marketing of our products. In the future, we may identify manufacturing issues or impurities that could result in delays in the clinical program and regulatory approval for our products, increases in our operating expenses, or failure to obtain or maintain approval for our products. Our reliance on third-party manufacturers entails risks, including the following:

- the inability to meet our product specifications, including product formulation, and quality requirements consistently;
- a delay or inability to procure or expand sufficient manufacturing capacity;
- manufacturing and product quality issues, including those related to scale-up of manufacturing;
- a failure to comply with cGMP and similar quality standards;
- termination or nonrenewal of manufacturing agreements with third parties in a manner or at a time that is costly or damaging to us;
- operations of our third-party manufacturers or suppliers could be disrupted by conditions unrelated to our business or operations, including the bankruptcy of the manufacturer or supplier;
- carrier disruptions or increased costs that are beyond our control;
- the failure to deliver our products under specified storage conditions and in a timely manner; and
- the imposition of tariffs on our products in the future.

Any of these events could lead to delays in any clinical trial we may undertake, failure to obtain regulatory approval or impact our ability to successfully commercialize any product candidates. Some of these events could be the basis for FDA or other regulatory authorities' action, including injunction, recall, seizure, or total or partial suspension of production.

Our third-party manufacturers or suppliers may use potent chemical agents and hazardous materials, and any claims relating to improper handling, storage or disposal of these materials could be time-consuming or costly.

Our third-party manufacturers or suppliers may use hazardous materials, including chemicals and biological agents and compounds that could be dangerous to human health and the safety of the environment. The operations of our third-party manufacturers and suppliers also produce hazardous waste products. Various laws and regulations govern the use, generation, manufacture, storage, handling and disposal of these materials and wastes. Compliance with applicable environmental laws and regulations may be expensive, and current or future environmental laws and regulations may impair our product development efforts. In addition, we cannot eliminate the risk of

accidental injury or contamination from these materials or waste, and we may be sued for any injury or contamination that results from our use or the use by third parties of these materials. In the event of contamination or injury, we could be held liable for damages or be penalized with fines in an amount exceeding our resources, and our clinical trials or regulatory approvals could be suspended.

In addition, we may incur substantial costs in order to comply with current or future environmental, health and safety laws and regulations, which have tended to become more stringent over time. These current or future laws and regulations may impair our research, development or production efforts. Failure to comply with these laws and regulations also may result in substantial fines, penalties or other sanctions or liabilities, which could materially adversely affect our business, financial condition, results of operations and prospects.

Our activities rely heavily on sensitive and personal data and information, an area which is highly regulated by privacy laws. Our failure to comply with such laws or to adequately secure the information we hold could result in significant liability or reputational harm and, in turn, a material adverse effect on our client base, member base and revenue. Further, if we are unable to generate or maintain access to essential patient samples or data for our research and development and manufacturing activities for our programs, our business could be materially adversely affected.

As a result of our clinical development, we will have access to sensitive data regarding the patients enrolled in our clinical trials, and our current and future product candidates will rely on the use of patient and donor data and material. This data will contain information that is personal in nature, and the maintenance of this data is subject to certain privacy-related laws, which impose administrative burdens, substantial costs and litigation risks upon us, such as the rules promulgated by the U.S. Department of Health and Human Services under the U.S. Health Insurance Portability and Accountability Act ("HIPAA"), and U.S. state privacy laws. These rules inter alia require that written authorizations from patients are obtained, and that policies, procedures and reasonable and appropriate security measures are implemented that protect individually identifiable health and other information we receive and to ensure that such information is used only as authorized by the patient. If the patient fails to execute an authorization or the authorization fails to contain all required provisions, then we will not be allowed access to the patient's information and our research efforts can be substantially delayed. Also, any violations of these rules by us could subject us to civil and criminal penalties and adverse publicity negatively impacting our ability to initiate and complete clinical trials. In addition, many state laws, for example, Washington's My Health My Data Act and California Consumer Privacy Act as amended by California Privacy Rights Act, govern the privacy and security of health information in specified circumstances, many of which differ from each other in significant ways, are often not pre-empted by HIPAA, and may have a more prohibitive effect than HIPAA, thus complicating compliance efforts.

The National Security Division of the DOJ also issued a new rule—referred to as the "Data Security Program", or DSP—to implement Executive Order 14117 aimed at preventing access to "bulk U.S. sensitive personal data" and "government-related data" by "countries of concern" (including China, Russia, Iran, North Korea, Cuba, and Venezuela) and "covered persons" (as all such terms are defined in the DSP). Effective as of April 8, 2025, the DSP imposes stringent obligations on companies within its scope and prohibits or restricts "covered data transactions" that grant countries of concern or covered persons access to bulk U.S. sensitive personal data or any amount of government-related data.

In addition, there are significant international laws that protect data privacy which we must adhere to. For example, we are subject to the EU General Data Protection Regulation, or the GDPR (as implemented by countries in the EEA), which applies extra-territorially and imposes onerous requirements on controllers (e.g., sponsors) and processors (e.g., CROs, laboratories, third-party vendors) of EEA personal data, including, for example: (i) accountability, transparency and accuracy requirements, and enhanced requirements for obtaining valid consent (separate and apart from informed medical consent); (ii) adhering to the principles of 'privacy by design and by default' when developing new products or services; (iii) complying with data minimization obligations; (iv) obligations in relation to the rights of data subjects; (v) ensuring that all processors that process personal data on our behalf have adequate protections in place; and (vi) reporting of personal data breaches to the supervisory authority without undue delay (and no later than 72 hours). The GDPR also prohibits the international transfer of personal data from the EEA to countries outside of the EEA unless made to a country deemed to have adequate data privacy laws by the European Commission or where a data transfer mechanism with appropriate safeguards has been put in place, such as the standard contractual clauses, or SCCs, and supplementary measures that provide privacy protections additional to those provided under SCCs.

Further, the GDPR provides that countries in the EEA may establish their own laws and regulations further restricting the processing of certain personal data, including genetic data, biometric data, and health data. Moreover, the interpretation and application of consumer, health-related, and data protection laws, especially with respect to genetic samples and data, in the United States, the European Union, and elsewhere, are often uncertain, contradictory, and in flux. As a result, implementation standards and enforcement practices are likely to remain uncertain for the foreseeable future, and we cannot determine the impact such future laws, regulations, and standards may have on our business. We cannot provide assurance that current or future legislation will not prevent us from generating or maintaining personal data or that patients will consent to the use of their personal data (as necessary); either of these circumstances may prevent us from undertaking or publishing essential research and development, manufacturing and commercialization, which could have a material adverse effect on our business, results of operations, financial condition and prospects.

After assessing the severity and frequency of the EEA personal data processing activities we engage in, we have established a Global Data Privacy Program and appointed an external data protection officer who has expert knowledge of data protection law and practices and assists us with monitoring internal compliance with the GDPR. However, we cannot assure that our policies and practices will be sufficient to protect us from liability or adverse publicity relating to the privacy and security of personal data. Privacy laws, rules, and regulations also evolve frequently, and their scope may continually change, through new legislation, amendments to existing legislation and changes in enforcement, and may be inconsistent from one jurisdiction to another.

Therefore, complying with various laws and regulations could cause us to incur substantial costs or require us to change our business practices, systems and compliance procedures in a manner adverse to our business. For example, failure to comply with the GDPR requirements could result in regulatory investigations, enforcement notices requiring us to stop or change the way we use personal data and/or fines of up to 20 million Euros or up to 4% of the total worldwide annual turnover of the preceding financial year, whichever is higher, as well as compensation claims for financial or non-financial loss by affected individuals, negative publicity, reputational harm and a potential loss of business and goodwill. In addition, our internal computer systems, or those used by our clinical investigators, contractors, or consultants, may fail or suffer security breaches.

We are a party to certain agreements that contain liability or indemnification provisions under which we may claim damages from our counterparties and under which our counterparties may claim damages from us, including damages caused by product defects.

We are a party to certain agreements, including clinical trial agreements and licensing agreements which contain liability or indemnification provisions under which we or the counterparty may claim damages. In the event we need to claim damages from a counterparty, we may not receive payments covering our damages in full, either because the applicable provision is unenforceable for any reason or because the counterparty is unable to pay (due to insolvency or otherwise). Although in many cases we try to limit our liability, such limitations may not be enforceable in certain jurisdictions or effective in the event that we need to pay damages and we nevertheless could become liable to make substantial payments. If we must make substantial liability payments under an agreement, this could have a material adverse effect on our business, results of operations, financial condition and prospects.

Risks Related to the Commercialization of Our Product Candidates

If we are unable to commercialize our product candidates IR and XR or any other product candidates that we may pursue, or experience significant delays in doing so, our business, financial condition, results of operations and prospects would be materially adversely affected.

We do not expect to generate product revenues in the foreseeable future. If our product candidates IR and XR or any other program that we may pursue do not receive marketing approvals, we will have to develop, acquire, or license new programs. Our product candidates, as well as any other programs we may pursue, could be unsuccessful if they:

- do not demonstrate acceptable safety or efficacy in nonclinical studies or clinical trials or otherwise do not meet applicable regulatory standards for approval;
- generate unacceptable adverse side effects;
- do not offer therapeutic or other improvements over existing or future products used to treat the same conditions;
- are not accepted in the medical community or by insurers, either public or private; or
- are not capable of being produced and delivered to patients in commercial quantities at acceptable costs.

The results of the research and trials to date cannot provide assurance that acceptable efficacy or safety will be shown upon completion of ongoing or planned clinical trials. Many products that show promise in proof-of-concept, Phase 1 and/or Phase 2 trials fail in later clinical trials or in a commercial setting. If we are unable to make our product candidates commercially available, or we experience significant delays in doing so, our business, financial condition, results of operations and prospects would be materially adversely affected.

The market opportunities for our product candidates may be smaller than currently anticipated, lowering our potential revenue.

The market opportunities for our product candidates may be smaller than currently anticipated, lowering our potential revenue. We make projections of both the number of people who have HAE, as well as the number of individuals within our target patient population who have the desire to switch to an oral therapy and the potential to benefit from treatment with our product candidates. These projections are derived from scientific literature and patient foundations but are highly contingent on a number of variables that are difficult to predict and may prove to be too high, resulting in a smaller population of patients who are interested in, and could benefit from, our product candidates than we currently anticipate which would result in lower potential revenue.

Moreover, if we are successful in developing both IR and XR, we cannot accurately predict the proportion of patients choosing prophylactic or on-demand only treatment regimens.

Use of our product candidates could be associated with side effects or adverse events.

As with all pharmaceutical products, use of our product candidates could be associated with side effects or adverse events, which can vary in severity and frequency. Side effects or adverse events associated with the use of our product candidates may be observed at any time, including in clinical trials or once a product is commercialized, and any such side effects or adverse events may negatively affect our ability to obtain regulatory approval or market our product candidates. Side effects or adverse events associated with the use of our product candidates could result in a label change, require us to perform additional studies or halt development or sale of these product candidates or expose us to product liability lawsuits, which will harm our business. We may be required by regulatory agencies to conduct additional nonclinical studies or clinical trials regarding the safety of our product candidates, which we have not planned or anticipated. For

instance, we were required to conduct a 26-week rodent toxicology study to resolve the clinical holds placed by the FDA on clinical trials of deucricitabant in the U.S. We cannot provide any assurance that we will resolve any issues related to any product-related side effects or adverse events to the satisfaction of the FDA or any regulatory agency in a timely manner or ever, which could harm our business, prospects and financial condition.

If we are successful in commercializing our product candidates, the FDA and other comparable foreign regulatory authorities require that we analyze and report certain information about adverse events that our products may have caused or contributed to. The FDA and other foreign regulatory authorities impose strict requirements with respect to the analysis of such events and the manner and timing of our reporting of the information to the regulatory authorities. We may fail to comply with the requirements for assessing and reporting adverse events and if we fail to comply with these obligations, the FDA or other comparable foreign regulatory authorities could take action including the issuance of warning letters or other regulatory correspondence, criminal prosecution, the imposition of civil sanctions, seizure of our products, or delay in approval or clearance of future products.

Even if any of our product candidates receives marketing approval, we may fail to achieve the degree of market acceptance by physicians, patients, third-party payors and others in the medical community necessary for commercial success.

Our product candidates may not be commercially successful. Even if any of our product candidates receive regulatory approval, they may not gain sufficient market acceptance among physicians, patients, healthcare payors or others in the medical community. The commercial success of any of our current or future product candidates will depend significantly on the broad adoption and use of the resulting product by physicians and patients for approved indications. The degree of market acceptance of any of our potential products as may receive marketing authorization will depend on a variety of factors, many of which are outside our control, including:

- demonstration of clinical efficacy and safety compared to other more established products;
- the limitation of our targeted patient population and other limitations or warnings contained in any approved labeling;
- acceptance of a new drug for the relevant indication by healthcare providers and their patients;
- the pricing and cost-effectiveness of our products, as well as the cost of treatment with our products in relation to alternative treatments and therapies;
- our ability to obtain and maintain sufficient third-party coverage and adequate reimbursement from government healthcare programs, private health insurers and other third-party payors;
- the willingness of patients to pay all, or a portion of, out-of-pocket costs associated with our products in the absence of sufficient third-party coverage and adequate reimbursement;
- any restrictions on the use of our products, and the prevalence and severity of any adverse effects;
- the timing of market introduction of our products as well as competitive drugs;
- the effectiveness of our or any of our potential future collaborators' sales and commercialization strategies; and
- unfavorable publicity relating to the product.

If any products that we may develop fail to achieve market acceptance, we may not be able to generate sufficient revenues. We may make substantial investments in clinical development, manufacturing, supply chain and commercialization without any assurance that we will be able to attain significant market share at a price that would enable us to recover our investments. If we are unable to do so, our business, financial condition, results of operations and prospects would be materially adversely affected.

We face substantial competition, which may result in others discovering, developing or commercializing competing products before or more successfully than we do.

The development and commercialization of new drug products is highly competitive. We face competition with respect to our current product candidates and will face competition with respect to any product candidates that we may seek to develop or commercialize in the future, from major pharmaceutical companies, specialty pharmaceutical companies and biotechnology companies worldwide. As discussed under "ITEM 4. INFORMATION ON THE COMPANY—B. Business overview—Competition," there are several approved therapies for HAE and we are aware of others in clinical development. Potential competitors also include academic institutions, government agencies and other public and private research organizations that conduct research, seek patent protection and establish collaborative arrangements for research, development, manufacturing and commercialization.

Our commercial opportunity could be reduced or eliminated if our competitors develop and commercialize products that are safer, more effective, have fewer or less severe side effects, are more convenient or are less expensive than any products that we may develop. In addition, our ability to compete may be affected in many cases by insurers or other third-party payors seeking to encourage the use of generic products. Generic products are expected to become available over the coming years, potentially creating pricing pressure. If our product candidates achieve marketing approval, we expect that they will be priced at a significant premium over competitive generic products. This may make it difficult for us to achieve our business strategy of using our product candidates in combination with existing therapies or replacing existing therapies with our product candidates. Competition may further increase as a result of advances in the commercial applicability of technologies and greater availability of capital for investment in these industries.

Many of the companies against which we are competing, or we may compete in the future have significantly greater financial resources and expertise in research and development, manufacturing, nonclinical testing, conducting clinical trials, obtaining regulatory approvals and marketing approved products than we do. Mergers and acquisitions in the pharmaceutical and biotechnology industries may result in even more resources being concentrated among a smaller number of our competitors. Smaller and other mid-stage companies may also prove to be significant competitors, particularly through collaborative arrangements with large and established companies. These third parties compete with us in recruiting and retaining qualified scientific and management personnel, establishing clinical trial sites and patient registration for clinical trials, as well as in acquiring technologies complementary to, or necessary for, our programs.

We may encounter difficulties in managing our growth and expanding our operations successfully.

If we advance our product candidates through clinical trials and regulatory approvals, we will need to expand our development, manufacturing, regulatory, commercialization and supply chain capabilities or contract with third parties to provide these capabilities for us. Our ability to realize our commercialization strategy and manage any growth will require us to continue to recruit and train additional qualified personnel and make appropriate changes to our operational, financial and management controls. We may experience a delay in becoming aware of certain issues or information material to management decisions. The expansion of our operations, including potential expansion into global markets outside of the European Union and the United States, may lead to significant costs, new challenges and risks and may divert the attention of our management and our business development resources. Any inability to manage anticipated growth and expanding operations, including as a result of failing to realize our commercialization strategy for our product candidates IR and XR, could adversely affect our business, financial condition, results of operations or prospects.

Governments and/or pricing authorities, especially in the European Union, often impose strict price and access controls, which may adversely affect our future profitability.

In some markets, especially in the European Union, prescription drug pricing is subject to governmental/ pricing authority control which can vary by country and degree. In these countries, pricing negotiations with governmental/pricing authorities can take considerable time after the receipt of marketing approval for a product. If reimbursement of any future products is unavailable or limited in scope or amount, or if pricing is set at unsatisfactory levels or the pricing negotiation is considerably delayed, we may be unable to achieve or sustain profitability.

Drug pricing and other healthcare costs continue to be subject to intense political and societal pressures, which we anticipate will continue and escalate on a global basis. These pressures may result in harm to our business and reputation, cause the market price of our ordinary shares to decline or experience periods of volatility and adversely affect our results of operations and our ability to raise funds.

The insurance coverage and reimbursement status of newly approved products is uncertain. Failure to obtain or maintain adequate coverage and reimbursement for new or current products could limit our ability to market those products and decrease our ability to generate revenue.

The availability and extent of reimbursement by governmental and private payors is essential for most patients to be able to afford expensive treatments. Sales of our product candidates will depend substantially, both domestically and abroad, on the extent to which the costs of our product candidates will be paid by health maintenance, managed care, pharmacy benefit and similar healthcare management organizations, or reimbursed by government health administration authorities, private health coverage insurers and other third-party payors. If reimbursement is not available, or is available only to limited levels, we may not be able to successfully commercialize our product candidates. Even if coverage is provided, the approved reimbursement amount may not be high enough to allow us to establish or maintain pricing sufficient to realize a sufficient return on our investment.

There is significant uncertainty related to the insurance coverage and reimbursement of newly approved products. In the United States, the principal decisions about reimbursement for new medicines are typically made by the CMS. CMS decides whether and to what extent a new medicine will be covered and reimbursed under Medicare. Private payors often rely upon Medicare coverage policy and payment limitations in setting their own reimbursement rates. It is difficult to predict what CMS will decide with respect to reimbursement for fundamentally novel products such as ours, as there is no body of established practices and precedents for these new products.

Outside the United States, international operations are generally subject to extensive governmental price controls and other market regulations, and we believe the increasing emphasis on cost-containment initiatives in Europe, Canada, and other countries has and will continue to put pressure on the pricing and usage of our product candidates. In many countries, the prices of medical products are subject to varying price control mechanisms as part of national health systems. In general, the prices of medicines under such systems are substantially lower than in the United States. Other countries allow companies to fix their own prices for medicines but monitor and control company profits. Additional foreign price controls or other changes in pricing regulation could restrict the amount that we are able to charge for our product candidates. Accordingly, in markets outside the United States, the reimbursement for our products may be reduced compared with the United States and may be insufficient to generate commercially reasonable revenues and profits.

Moreover, increasing efforts by governmental and third-party payors, in the United States and abroad, to cap or reduce healthcare costs may cause such organizations to limit both coverage and level of reimbursement for new products approved and, as a result, they may not cover or provide adequate payment for our product candidates. We expect to experience pricing pressures in connection with the sale of any of our product candidates, due to the trend toward managed healthcare, the increasing influence of health maintenance organizations and additional legislative changes.

The downward pressure on healthcare costs in general, particularly prescription drugs and surgical procedures and other treatments, has become very intense. As a result, increasingly high barriers are being erected to the entry of new products into the healthcare market.

In addition, many private payors contract with commercial vendors who sell software that provide guidelines that attempt to limit utilization of, and therefore reimbursement for, certain products deemed to provide limited benefit to existing alternatives. Such organizations may set guidelines that limit reimbursement or utilization of our products.

We may become exposed to costly and damaging liability claims, either when testing our product candidates in the clinic or after commercialization; and our product liability insurance may not cover all damages from such claims.

We face an inherent risk of product liability as a result of the clinical testing of our product candidates and will face an even greater risk if we commercialize any products. For example, we may be sued if any product we develop allegedly causes injury or is found to be otherwise unsuitable during product testing, manufacturing, marketing or sale. Any such product liability claims may include allegations of defects in manufacturing, defects in design, a failure to warn of dangers inherent in the product, negligence, strict liability and a breach of warranties. Physicians and patients may not comply with any warnings that identify known potential adverse effects and patients who should not use our products. If we cannot successfully defend ourselves against product liability claims, we may incur substantial liabilities or be required to stop development or, if approved, limit commercialization of our product candidates. Even successful defenses would require significant financial and management resources. Regardless of the merits or eventual outcome, liability claims may result in:

- delay or termination of clinical trials;
- injury to our reputation and negative publicity;
- withdrawal of clinical trial participants, patients or clinical investigators;
- initiation of investigations by regulators or ethics committees;
- costs to defend the related litigation;
- a diversion of management's time and our resources;
- substantial monetary awards to trial participants or patients;
- decreased demand for our product candidates;
- product recalls or withdrawals, or labeling, marketing or promotional restrictions;
- loss of revenues from product sales;
- the inability to commercialize any of our product candidates, if approved; and
- a decline in the price of our ordinary shares.

Any product liability insurance coverage we obtain may not fully cover potential liabilities that we may incur. Our insurance policies have various exclusions, and we may be subject to a product liability claim for which we have no coverage. The cost of any product liability litigation or other proceeding, even if resolved in our favor, could be substantial. We will have to pay any amounts awarded by a court or negotiated in a settlement that exceed our coverage limitations or that are not covered by our insurance, and we may not have, or be able to obtain, sufficient capital to pay such amounts.

We will also need to increase our insurance coverage if we commercialize any product that receives marketing approval. Insurance coverage is becoming increasingly expensive. If we are unable to maintain sufficient insurance coverage at an acceptable cost or to otherwise protect against potential product liability claims, it could prevent or inhibit the development and commercial production and sale of our product candidates, which could harm our business, financial condition, results of operations and prospects.

If we are unable to establish commercial capabilities or enter into agreements with third parties to market, sell and distribute our product candidates, we may be unable to generate any revenues if and when our product candidates are approved.

If any of our product candidates receive marketing approval, we intend to market, sell and distribute them using our own commercial infrastructure. However, we have no experience in commercialization, selling and distributing pharmaceutical products or establishing a commercial organization. We may enter into collaborations with other entities to utilize their mature sales, marketing and distribution capabilities, but we may be unable to enter into commercialization agreements on favorable terms, if at all. If our future collaborative partners do not commit sufficient resources to commercialize our product candidates, if approved, or if we are unable to develop the necessary commercialization capabilities on our own, we will be unable to generate sufficient product revenues to sustain our business. Further, we may not have sufficient control or oversight over our future collaborative partners to ensure they sell and market our product candidates in compliance with all applicable law. In building our commercial infrastructure or commercializing our product candidates, if approved, we will be competing with other well-funded companies that currently have or are building extensive commercial operations. Without an internal team or the support of a third-party to perform commercial functions, we may be unable to successfully commercialize our product candidates, if approved, and/or compete successfully against these companies.

Risks Related to Our Reliance on Third Parties and Key Personnel

If third parties on which we depend to conduct our clinical trials do not perform as contractually required, fail to satisfy regulatory or legal requirements or miss expected deadlines, our development program could be delayed with materially adverse effects on our business, financial condition, results of operations and prospects.

We rely on CROs, independent clinical investigators, clinical data management organizations, consultants and other third-party firms to design, conduct, supervise and monitor clinical trials. We and these third parties are required to comply with extensive regulations, including good clinical practices, or GCP, which are enforced by the competent authorities of the member states of the European Economic Area, or EEA, the FDA and other comparable regulatory authorities; GCP are intended to ensure that the health, safety and rights of patients are protected in clinical development and clinical trials, and that trial data integrity is assured. In fact, as sponsor of the clinical trials, GCP compliance remains our responsibility. Regulatory authorities ensure compliance with these requirements through periodic inspections of trial sponsors, clinical investigators and trial sites. Our reliance on third parties that we do not control does not relieve us of these responsibilities and requirements. If we or any of these third parties fail to comply with applicable requirements, clinical trials may be put on “clinical hold,” the clinical data generated in our clinical trials may be deemed unreliable and the FDA or comparable foreign regulatory authorities may require us to perform additional clinical trials before approving our marketing applications. We cannot assure that upon inspection by a given regulatory authority, such regulatory authority will determine that any of our clinical trials comply with such requirements. In addition, our clinical trials must be conducted with products that are cGMP produced. Failure to comply with these regulations may result in a clinical hold or require us to repeat nonclinical studies and clinical trials, which would delay the regulatory approval process.

Third-party staff are not our employees and, except for remedies available to us under our agreements with such third parties, we cannot control whether or not they devote sufficient time and resources to our ongoing clinical and nonclinical programs and meet their quality and other requirements. If these third parties do not successfully carry out their contractual duties or obligations or meet expected deadlines or if the quality or accuracy of the product or clinical data they obtain is compromised due to the failure to adhere to our clinical protocols, regulatory requirements or for other reasons, our clinical trials may be put on hold, extended, delayed or terminated and we may not be able to obtain regulatory approval for or successfully commercialize our product candidates. As a result, our operations and the commercial prospects for our product candidates in development would be harmed, our costs could increase and our ability to generate revenues could be delayed.

Because we have relied on third parties, our internal capacity to perform these functions is limited. Outsourcing these functions involves the risk that third parties may not perform to our standards, may not produce results in a timely manner or may fail to perform at all. In addition, the use of third-party service providers requires us to disclose our proprietary information to these parties, which could increase the risk that this information will be misappropriated. We currently have a small number of employees, which limits the internal resources we have available to identify and monitor our third-party providers. To the extent we are unable to identify and successfully manage the performance of third-party service providers in the future, our business may be adversely affected. Though we carefully manage the relationships with third parties, there can be no assurance that we will not encounter similar challenges or delays in the future or that these delays or challenges will not have a material adverse impact on our business, financial condition, results of operation and prospects.

If we cannot contract with acceptable third parties on commercially reasonable terms, or at all, or if these third parties do not carry out their contractual duties, satisfy legal and regulatory requirements for the conduct of nonclinical studies or clinical trials or meet expected deadlines, our clinical development programs could be delayed and otherwise adversely affected. Any such event could have a material adverse effect on our business, financial condition, results of operations and prospects.

We are dependent on the services of our management and other clinical and scientific personnel, and if we are not able to retain these individuals or recruit additional management or clinical and scientific personnel, our business will suffer.

Our success depends in part on our continued ability to attract, retain and motivate highly qualified management, clinical and scientific personnel. We are highly dependent upon our senior management team as well as our senior scientists. The loss of services of any of these individuals could delay or prevent the successful development of our product candidates, initiation or completion of our planned clinical trials or the commercialization of our product candidates. Our industry has experienced a high rate of turnover of management, clinical and scientific personnel in recent years and despite our efforts to retain valuable employees, members of our management, scientific and development teams may terminate their employment with us. In addition, as we expand our operations, we may not be successful in maintaining our unique company culture and continuing to attract or retain qualified management and scientific and clinical personnel in the future due to the intense competition for qualified personnel among pharmaceutical, biotechnology and other businesses. Replacing executive officers and key employees may be difficult and may take an extended period of time because of the limited number of individuals in our industry with the breadth of skills and experience required to successfully develop, gain regulatory approval of and commercialize products. Competition to hire from this limited pool is intense, and we may be unable to hire, train, retain or motivate these key personnel on acceptable terms given the competition among numerous pharmaceutical and biotechnology companies for similar personnel. We also experience competition for the hiring of scientific and clinical personnel from universities and research institutions. If we do not have sufficient numbers of skilled employees to support our research, development, manufacturing, regulatory compliance or management functions, or if our employees lack the skills necessary for the development of our operations, we may need to

retain consultants and advisers, if available on terms acceptable to us, if at all, who may have conflicts of interest or other commitments, such as consulting or advisory contracts with other organizations that may affect their ability to contribute to us. In addition, if we are not able to attract, integrate, retain and motivate sufficient scientific, technical and managerial personnel, we will be unable to advance our clinical programs or expand our business, which may have a material adverse effect on our business, financial condition, results of operations and prospects.

We are heavily dependent on third parties to perform critical activities related to the research, development and manufacturing of our product candidates. If these third parties fail or are unable to perform, our development programs and candidate products could be materially and adversely affected and our business and prospects will suffer.

We are heavily dependent on third parties to conduct certain key activities relating to the research, development and manufacturing of our product candidates. For example, we rely on third-party firms to conduct development, studies, and trials with respect to our candidate products and to manufacture and supply the material used in our studies and trials.

Our reliance on third parties may pose the following risks to us:

- third parties have significant discretion in determining the efforts and resources that they will apply to our development programs and product candidates;
- third parties could independently develop, supply, manufacture, commercialize or collaborate with additional third parties, products that compete directly or indirectly with our product candidates;
- third parties may not properly prosecute, maintain, enforce or defend our intellectual property rights or may use our proprietary information in a way that gives rise to actual or threatened litigation that could jeopardize or invalidate our intellectual property or proprietary information or expose us to potential litigation, or other intellectual property proceedings;
- disputes may arise with respect to ownership of any intellectual property developed pursuant to our collaborations and activities with third parties;
- disputes may arise between us and our third-party collaborators and service provider that cause the delay or termination of the development, manufacturing, supply or commercialization of our product candidate, or that result in costly litigation or arbitration that diverts management's attention and resources; and
- if a current or future third-party collaborator or service provider of ours were to be involved in a business combination, the continued pursuit and emphasis on our product development or commercialization program could be delayed, diminished or terminated.

As a result, if any third parties upon which we are dependent fail or are unable to perform, our development programs and candidate products could be materially adversely affected.

We may be unable to enter into or maintain strategic alliances or collaborations which could affect our ability to commercialize our product candidates, if approved.

We may seek strategic alliances or collaborations to further the clinical development and commercialization of certain of our product candidates as they would likely require expensive and time-consuming clinical trials. In seeking strategic partners, we face significant competition from other companies as well as public and private research institutions. There can be no assurance that we will be able to enter into or maintain strategic alliances on terms favorable to us, or at all. Potential partners may require royalty or milestone payments, rights to current or after-developed intellectual property, exclusivity rights, limitations on liabilities, indemnities or other provisions that are adverse to us. Potential partners may fail to diligently fund, develop or commercialize our product candidates. Any of the foregoing may have a material adverse effect on our business, financial condition, results of operations and prospects.

Risks Related to Our Intellectual Property

If we fail to make required payments pursuant to the agreements with BRAIN to which we acquired certain of our core intellectual property or are otherwise in material breach of such agreements (and fail to cure such breaches within a specified time period), BRAIN may exercise remedies pursuant to such agreements that would materially and adversely affect our business and results of operations.

Certain intellectual property that is core to our business has been invented by BRAIN and contractually assigned to us by BRAIN, with whom we continue to collaborate for the development of our product candidates. Under the BRAIN agreements, we owe milestone payments contingent on our achievement of certain clinical development and regulatory events, as well as royalties and milestone payments based on sales of such product candidates. If we fail to make such payments or are otherwise in material breach of certain agreements that we entered into with BRAIN (and fail to cure such breaches within a specified time period), and BRAIN exercises contractual remedies available to it under such agreements, then we may be required to grant BRAIN an exclusive license to the intellectual property that it assigned to us for use in all applications, including HAE. In addition, we could be prevented from competing with BRAIN until five years after the commercial launch of any product candidates containing a compound from the OB2RA Class. If we failed to make such payments and BRAIN were to exercise such remedies, we would not be able to continue our current development program or commercialize our product candidates and our business and results of operations would be materially and adversely affected. For a description of our arrangement with BRAIN, please see "ITEM 4. INFORMATION ON THE COMPANY—B. Business overview—License Agreement."

If we are unable to obtain and maintain patent or trade secret protection for any products or product candidates we develop and for our technology, or if the scope of the patent protection obtained is not sufficiently broad, our competitors could develop and commercialize products and technology similar or identical to ours, and our ability to successfully commercialize any product candidates or technology we may develop may be adversely affected.

Our commercial success depends in significant part on obtaining and maintaining current and future patent protection, trade secrets and confidential know-how for our technologies, product candidates, the methods used to manufacture those product candidates and the methods for treating patients using those product candidates. We may not be able to file, prosecute, maintain, enforce, or license all necessary or desirable patents and patent applications at a reasonable cost or in a timely manner. Our failure to obtain, maintain or extend patent protection or to protect trade secrets or confidential know-how could materially adversely affect our ability to compete and to exclude others from copying our processes and technologies.

Obtaining and enforcing patents in the pharmaceutical industry involves both technological and legal complexity and is therefore costly, time consuming and subject to numerous risks and uncertainties. These risks and uncertainties include, but are not limited to, the following:

- the United States Patent and Trademark Office, or USPTO, and various foreign governmental patent agencies require compliance with a number of procedural, documentary, fee payment and other provisions during the patent process, the noncompliance with which can result in abandonment or lapse of a patent or patent application, and partial or complete loss of patent rights in the relevant jurisdiction;
- patent applications may not result in any patents being issued;
- patents may be challenged, invalidated, modified, revoked, circumvented, found to be unenforceable or otherwise may not provide any competitive advantage;
- our competitors, many of whom have substantially greater resources than we do and many of whom have made significant investments in competing technologies, may seek or may have already obtained patents that will limit, interfere with or block our ability to make, use and sell our product candidates;
- there may be significant pressure on the U.S. government and international governmental bodies to limit the scope of patent protection both inside and outside the United States for disease treatments that prove successful, as a matter of public policy regarding worldwide health concerns; and
- countries other than the United States may have patent laws less favorable to patentees than those upheld by U.S. courts, allowing foreign competitors a better opportunity to create, develop and market competing products.

If we or any third parties that develop or create any intellectual property for us are unable to secure necessary assignments or rights, including from investors, as applicable, then our rights to such intellectual property, and ultimately our ability to protect our candidate products, may be adversely affected.

It is also possible that we fail to identify patentable aspects of our research and development output in time to obtain patent protection. In addition, we may not be aware of all third-party intellectual property rights potentially relating to our product candidates and technology. We cannot guarantee that any of our or our licensors' patent searches or analyses, including but not limited to the identification of relevant patents, analysis of the scope of relevant patent claims or determination of the expiration of relevant patents, are complete or thorough, nor can we be certain that we have identified each and every third-party patent and pending application in the United States and elsewhere that is relevant to or necessary for the development and commercialization of our product candidates in any jurisdiction. For example, publications of discoveries in the scientific literature often lag behind the actual discoveries, and patent applications in the United States and other jurisdictions are typically not published until 18 months after filing, or in some cases not at all. Therefore, we cannot be certain that we were the first to make the inventions claimed in any licensed patents or pending patent applications (or claimed in any patents or patent applications that we may own in the future, if any), or that we were the first to file for patent protection of such inventions.

The duration and scope of any patents we are issued in the future (if any) or the patent rights of our licensors or collaborators may not be sufficient to effectively protect our product candidates and business.

The patent position of biopharmaceutical companies generally is highly uncertain, involves complex legal and factual questions, and has been the subject of much litigation in recent years. As a result, the issuance, scope, validity, enforceability and commercial value of our patent rights are highly uncertain. Even if our current or future patent applications are issued as patents, they may not be issued with the scope of claims sought by us, or the scope of claims we or our licensors are seeking may not be sufficiently broad to protect our product candidates or provide us with any competitive advantage. Any patents that we may own in the future (if any) may be challenged or circumvented by third parties or may be narrowed or invalidated as a result of challenges by third parties. Consequently, we do not know whether our product candidates will be protectable by valid and enforceable patents.

Moreover, the coverage claimed in a patent application can be significantly reduced before the patent is issued, and its scope can be reinterpreted after issuance. Changes in or different interpretations of patent laws in the United States, Europe, and other jurisdictions may also permit others to use our discoveries or to develop and commercialize our technology and products without providing any compensation to us, or may limit the number of patents or claims we can obtain. The laws of some countries do not protect intellectual property rights to the same extent as U.S. and European laws and those countries may lack adequate rules and procedures for defending our intellectual property rights.

Our competitors and other third parties would be able to offer and sell products so long as they do not infringe any valid and enforceable patents or other proprietary rights that we or others, including our licensors, may have. The specific content of patents and patent applications that are necessary to support and interpret the scope of patent claims is highly uncertain due to the complex nature of the relevant legal, technical and factual issues. Such risks will increase if we or our licensors are not able to obtain additional patents protecting aspects of our product candidates and technology, such as product improvements, formulations, methods of production or novel uses of the relevant product candidates.

In addition, patents have a limited lifespan. For example, if renewal fees are paid in a timely manner, a European patent expires 20 years after its effective filing date. Similarly, if all maintenance fees are timely paid, a patent in the United States generally expires 20 years after its effective filing date. Depending upon the timing, duration and specifics of any FDA marketing approval of any product candidates we may develop in the United States, any patents we are issued in the future (if any) may qualify for a limited patent term extension if certain criteria are met (e.g., in case of significant delays during patent prosecution or during FDA approval for bringing a drug covered by a patent to market) under the Drug Price Competition and Patent Term Restoration Act of 1984, referred to as the Hatch-Waxman Amendments. Specifically, the Hatch Waxman Amendments permit a patent extension term of up to five years as compensation for patent term lost during the FDA regulatory review process. A patent term extension cannot extend the remaining term of a patent beyond a total of 14 years from the date of product approval, only one patent may be extended and only those claims covering the approved drug, a method for using it, or a method for manufacturing it may be extended. However, in such an event we may not be granted an extension because of, for example, failing to exercise due diligence during the testing phase or regulatory review process, failing to apply within applicable deadlines, failing to apply prior to expiration of relevant patents, or otherwise failing to satisfy applicable requirements. Moreover, the applicable time period or the scope of patent protection afforded could be less than we request. In the European Union, an extension of the duration of protection for a pharmaceutical product on the basis of a supplementary protection certificate could be applied for after a valid market authorization is obtained and if the product is specifically covered by a basic patent in force. As a result, an additional term of protection could be obtained for the relevant product on top of the maximum lifespan of the patent. The term of the allowed extension varies, and in principle is at most five and a half years. Consequently, despite these general possibilities for obtaining a certain extension of the duration of protection based on a patent if certain criteria are met, the protection provided by a patent is limited in time.

Furthermore, given the amount of time required for the development, testing, and regulatory review of new product candidates, patents protecting such candidates might expire before or shortly after such candidates are commercialized. Even if additional patents covering our product candidates are obtained, the expiration of a patent may leave us more vulnerable to competition from biosimilar or generic alternatives, and our business, financial condition, results of operations and prospects could be materially harmed. As a result, our intellectual property may not provide us with sufficient rights to exclude others from commercializing products similar or identical to ours. Any of the foregoing could have a material adverse effect on our competitive position, business, financial conditions, results of operations and prospects.

Patents covering our technology and product candidates that may be issued (if any) could be found invalid or unenforceable if challenged in court or an issuing body.

The issuance of a patent is not conclusive as to its inventorship, scope, validity or enforceability, and any patents we may own in the future (if any) may be challenged in the courts or patent offices in the United States and elsewhere. Such challenges may result in loss of exclusivity or in patent claims being narrowed, invalidated or held unenforceable which could limit our ability to stop others from using or commercializing similar or identical technology and products, or limit the duration of the patent protection of our technology and product candidates.

To the extent that we obtain any patents in the future, our patent protection in respect of our product candidates and technologies may be limited or lost if patents that may be issued to us or patents we use under the terms of exclusive commercial licenses were to be declared invalid, rendered unenforceable or narrowed in scope as a result of any re-examination, post grant review, inter partes review, interference proceedings, derivation proceedings, equivalent proceedings in other jurisdictions or judicial action. If one of our licensing partners or we initiate legal proceedings against a third-party to enforce a patent covering one of our product candidates or technologies, the defendant could counterclaim that the patent covering our product candidate is invalid or unenforceable. Grounds for a validity challenge could be an alleged failure to meet any of several statutory requirements, including lack of novelty, obviousness, lack of patentable subject matter, lack of written description or non-enablement. Grounds for an unenforceability assertion could be an allegation that someone connected with prosecution of the patent withheld information material to patentability from the relevant issuing body, or made a misleading statement, during prosecution. A challenge to patents could result in a ruling adverse to us that could invalidate or render unenforceable such patents or substantially reduce the scope of protection afforded by them. A court may also determine, retrospectively, that despite the issuance of the patent by the relevant issuing body, the corresponding patent application did not meet the statutory requirements. If a competitor or other third parties were to successfully challenge our patents (to the extent any are obtained), and claims in these patents were consequently narrowed, rendered unenforceable or invalidated, our ability to protect the related product candidate or technology from competition could be compromised. Such proceedings could result in the revocation or cancellation of or amendment to such patents in such a way that they no longer cover our product candidates. The outcome following legal assertions of invalidity and unenforceability is unpredictable. With respect to the validity question, for example, we cannot be certain that there is no invalidating prior art, of which the patent examiner and we or our licensing partners were unaware during prosecution. If a defendant were to prevail on a legal assertion of invalidity or unenforceability, we could lose at least part, and perhaps all, of the patent protection on one or more of our product candidates to the extent that any such patents are issued. Such a loss of patent protection could have a material adverse impact on our business.

We may not be able to protect or enforce our intellectual property rights in all jurisdictions.

Filing, prosecuting, and defending patents on product candidates in all countries throughout the world would be prohibitively expensive, and the laws of foreign countries may not protect our rights to the same extent as the laws of the United States or the European Union. Consequently, we may not be able to prevent third parties from practicing our inventions in all countries, or from selling or importing products made using our inventions in and into the United States, the European Union or other jurisdictions. Competitors may use our technologies in jurisdictions where we have not obtained patent protection to develop their own products and may export otherwise infringing products and these products may compete with our product candidates in jurisdictions where we do not have any issued patents.

Many companies have encountered significant problems in protecting and defending intellectual property rights in foreign jurisdictions. Patent laws vary by jurisdiction, and, accordingly, the degree of protection afforded to the same technology, if any, may differ depending on the jurisdiction. The legal systems of certain countries, particularly certain developing countries, do not favor the enforcement of patents and other intellectual property protection, particularly those relating to biopharmaceuticals, which could make it difficult for us to stop the infringement of any patents we are issued in the future (if any) or commercialization of competing products in violation of our proprietary rights generally. Proceedings to enforce any patent rights we are issued in the future (if any) in foreign jurisdictions could result in substantial costs and divert our efforts and attention from other aspects of our business, could put such patents at risk of being invalidated or interpreted narrowly and could provoke third parties to assert claims against us. In such an event, we may not prevail in any lawsuits that we initiate, and the damages or other remedies awarded, if any, may not be commercially meaningful. Accordingly, our efforts to enforce our intellectual property and proprietary rights around the world may be inadequate to obtain a significant commercial advantage from the intellectual property that we develop or license. Our inability to protect or enforce our intellectual property rights throughout the world could have a material adverse effect on our business, prospects, financial condition, results of operations and prospects.

In addition, many countries have compulsory licensing laws under which a patent owner may be compelled to grant licenses to third parties and many countries limit the enforceability of patents against government agencies or government contractors. In these countries, the patent owner may have limited remedies, which could materially diminish the value of such patent. If we (to the extent we are issued any patents covering our product candidates) or any of our licensors are forced to grant a license to third parties with respect to any patents relevant to our business or we are unable to enforce a patent relevant to our business against a government agency or government contractor, our competitive position may be impaired, and our business, financial condition, results of operations and prospects may be adversely affected.

Changes in patent law could diminish the value of patents in general, thereby impairing our ability to protect our product candidates.

To the extent that we are issued patents covering our product candidates (if any), changes in either patent laws or interpretations of patent laws in the United States, the European Union, Canada or other jurisdictions may diminish the value of our intellectual property or narrow the scope of our patent protection and could increase the uncertainties and costs surrounding the prosecution of patent applications and the enforcement or defense of issued patents (to the extent any such patents are issued).

For example, patent reform legislation in the United States, including the Leahy-Smith America Invents Act, or the America Invents Act, could increase those uncertainties and costs. The America Invents Act was signed into law on September 16, 2011, and many of the substantive changes became effective on March 16, 2013. The America Invents Act reforms United States patent law in part by changing the U.S. patent system from a “first to invent” system to a “first inventor to file” system in which, assuming that other requirements for patentability are met, the first inventor to file a patent application will be entitled to the patent on an invention regardless of whether a third-party was the first to invent the claimed invention. In addition, the America Invents Act expands the definition of prior art and develops a post-grant review system. This legislation changed United States patent law in a way that may weaken our ability to obtain patent protection in the United States for those applications filed after March 16, 2013.

Further, the America Invents Act created new procedures to challenge the validity of issued patents in the United States, including post grant review, *inter partes* review, and derivation proceedings, which some third parties have been using to cause the cancellation of selected or all claims of issued patents. These adversarial actions at the USPTO review patent claims without the presumption of validity afforded to U.S. patents in lawsuits in U.S. federal courts and use a lower burden of proof than used in litigation in U.S. federal courts. Therefore, it is generally considered easier for a competitor or third-party to have a U.S. patent invalidated in a USPTO post-grant review or *inter partes* review proceeding than invalidated in a litigation in a U.S. federal court. If any patents that we are issued in the future (if any) or our licensor’s patents are challenged by a third-party in such a USPTO proceeding, there is no guarantee that we or our licensors or collaborators will be successful in defending the patent, which would result in a loss of the challenged patent right to us.

In addition, the patent positions of companies in the development and commercialization of pharmaceuticals are particularly uncertain. Recent court rulings in cases such as *Association for Molecular Pathology v. Myriad Genetics, Inc.*, *BRCA1- & BRCA2-Based Hereditary Cancer Test Patent Litigation*, *Mayo Collaborative Services v. Prometheus Laboratories, Inc.*, *Promega Corp. v. Life Technologies Corp.* and *Abbvie Deutschland GmbH v. Janssen Biotech, Inc.* have narrowed the scope of patent protection available in certain circumstances and weakened the rights of patent owners in certain situations. In addition to increasing uncertainty with regard to our ability to obtain patents in the future, this combination of events has created uncertainty with respect to the value of patents once obtained. Depending on future actions by the U.S. Congress, the U.S. courts, and the USPTO and the relevant law-making bodies in other countries, the laws and regulations governing patents could change in unpredictable ways that would weaken our ability to obtain new patents or to enforce patents that we might obtain in the future. Any changes to patent law in the U.S. or other jurisdictions that impairs our ability to protect our deucricitabant and other product candidates that we may pursue could have a material adverse effect on our business, financial condition, results of operations and prospects.

Confidentiality agreements with employees and third parties may not prevent unauthorized disclosure of trade secrets and other proprietary information and may not provide an adequate remedy.

We consider proprietary trade secrets and confidential know-how and unpatented know-how to be important to our business. We rely on trade secrets and confidential know-how to protect our technology, especially where we do not believe that patent protection is appropriate or obtainable. However, trade secrets and confidential know-how are difficult to protect and some courts in the United States, the European Union and elsewhere are less willing or unwilling to protect trade secrets. We seek to protect our proprietary trade secrets and confidential know-how, in part, by entering into confidentiality agreements with our current and former employees, consultants, contractors, outside scientific collaborators and other advisers. However, we cannot guarantee that we have entered into such agreements with each party that may have or has had access to our trade secrets or confidential know-how or that such agreements will fully protect our proprietary trade secrets and confidential know-how. Our current or former employees, consultants, contractors, outside scientific collaborators and other advisers may have access to and unintentionally or willfully disclose our confidential information, including to competitors. Our confidentiality agreements may be breached by such individuals and we may not have adequate remedies for any breach. Enforcing a claim that a third-party obtained illegally and is using trade secrets and confidential know-how illegally is expensive and time consuming and the outcome is unpredictable. Failure to obtain or maintain trade secret and confidential know-how trade protection could adversely affect our competitive business position. Moreover, our competitors and other third parties may independently develop equivalent knowledge, methods and know-how and may even apply for patent protection in respect of the same. If successful in obtaining such patent protection, our competitors could limit how we use our trade secrets and confidential know-how, which may have a material adverse effect on our business, financial condition, results of operations and prospects.

If we or our licensors infringe, misappropriate or otherwise violate intellectual property rights of third parties, we may face increased costs or we may be unable to commercialize our product candidates.

Our commercial success depends upon our ability to develop, manufacture, market, sell and distribute our product candidates and use our proprietary technologies without infringing, misappropriating or otherwise violating the proprietary rights and intellectual property of third parties. The biotechnology and pharmaceutical industries are characterized by extensive and complex litigation regarding patents and other intellectual property rights. There is a risk that third parties may allege that our employees, consultants, independent contractors or the licensors have wrongfully used or disclosed trade secrets and we infringed, are infringing, or will infringe the proprietary rights of third parties because patents and pending applications belonging to third parties exist in the European Union, the United States and elsewhere in the world in the areas in which our research is conducted. Because patent applications take several years to complete, there may be currently pending applications, unknown to us, which may later result in issued patents that cover the development production, manufacture, commercialization or use of our product candidates and technology. In addition, the development production, manufacture, commercialization or use of our product candidates may infringe existing patents of which we are not aware. Even if we believe such claims of infringement are without merit, a court of competent jurisdiction could hold that these third-party patents are valid, enforceable and infringed, which could materially and adversely affect our ability to commercialize our product candidates and technology. In order to successfully challenge the validity of any such U.S. patent in federal court, we would need to overcome a presumption of validity. As this burden is a high one requiring us to present clear and convincing evidence as to the invalidity of any such U.S. patent claim, there is no assurance that a court of competent jurisdiction would invalidate the claims of any such U.S. patent. Even if we are successful in defending against such claims, litigation could be time-consuming and result in substantial costs and be a distraction to management.

If we are found to infringe a third-party's valid and enforceable intellectual property rights, we could be required to:

- cease developing, manufacturing, selling or licensing the infringing product candidates or technology;
- obtain a license from such third-party to continue developing, manufacturing and marketing our product candidates and technologies, which may not be available on commercially reasonable terms or at all and even if we were able to obtain a license, it could be non-exclusive, thereby giving our competitors and other third parties access to the same technologies licensed to us, and it could require us to make substantial licensing and royalty payments or grant a cross license to our patents (to the extent any such patents are issued) to another patent holder;
- pay substantial damages for past infringement, including treble damages and attorneys' fees, if we are found to have willfully infringed a patent or other intellectual property right; or
- be required to redesign the formulation of a product such that it does not infringe, which may not be possible or could require substantial funds and time.

Any of the foregoing could have a material adverse effect on our business, financial condition, results of operations and prospects.

We have received proprietary information and know-how from third parties. In addition, many of our employees were previously employed at other biotechnology or pharmaceutical companies. Although we try to ensure that our employees, consultants, and advisors do not use the proprietary information or know-how of others in their work for us, we may be subject to claims that we or these individuals have used or disclosed intellectual property, including trade secrets or other proprietary information, of any such individual's current or former employer. We may be subject to ownership disputes in the future arising, for example, from conflicting obligations of consultants or others who are involved in developing our product candidates. We may also be subject to claims that former employees, consultants, advisors or other third parties have an ownership interest in our patents or other intellectual property. Litigation may be necessary to defend against these claims. If we fail in defending any such claims, in addition to paying monetary damages, we may lose valuable intellectual property rights or personnel, which could have a material adverse effect on our business, financial condition, results of operations and prospects, and be a distraction to our management and employees.

Intellectual property litigation or proceedings could cause us to spend substantial resources and distract our personnel from their normal responsibilities.

To the extent that we are issued any patents covering our product candidates, competitors may infringe such patents or the patents of our licensing partners. However, we may not have the resources to reliably detect infringements of intellectual property rights, and even if we detect an infringement, we may not be able to trace the source of the infringement, or uphold our rights. We may need to resort to litigation to enforce our intellectual property rights, including any patents issued to us (if any) or our licensors. If a competitor or other third-party files a patent application claiming technology also invented by us, in order to protect our rights, we may have to participate in an expensive and time-consuming opposition proceeding before the European Patent Office, the USPTO or patent authorities or courts in other jurisdictions, with an uncertain outcome and which may have a material adverse effect on our business, financial condition, results of operations and prospects.

In addition, our success depends in part on avoiding the infringement of other parties' patents and other intellectual property rights as well as avoiding the breach of any licenses relating to our technologies and products. In the United States, patent applications filed in recent years are confidential for 18 months, while older applications are not published until the patent issues. As a result, avoiding patent infringement may be difficult and we may inadvertently infringe third-party patents or proprietary rights. Countering infringement or unauthorized use claims or to defend against such claims and challenges can be expensive and time consuming. In addition, there could be public announcements of the results of hearings, motions or other interim proceedings or developments and if securities analysts or investors perceive these results to be negative, it could have a substantial adverse effect on the price of our ordinary shares.

Even if resolved in our favor, litigation or other legal proceedings relating to intellectual property claims may cause us to incur significant expenses and could distract our technical and management personnel from their normal responsibilities. Such litigation or proceedings could substantially increase our operating losses and reduce the resources available for development activities or any future sales, commercialization or distribution activities. We may not have sufficient financial or other resources to adequately conduct such litigation or proceedings. Some of our competitors may be able to sustain the costs of such litigation or proceedings more effectively than we can because of their greater financial resources and more mature and developed intellectual property portfolios. Uncertainties resulting from the initiation and continuation of patent litigation or other proceedings could have a material adverse effect on our ability to finance our business activities and to compete in the marketplace.

Obtaining and maintaining our patent protection depends on compliance with various procedural, document submission, fee payment and other requirements imposed by government patent agencies, and our patent protection could be reduced or eliminated for non-compliance with these requirements.

Periodic maintenance fees, renewal fees, annuity fees and various other government fees on patents and/or applications will be due to be paid to various patent agencies over the lifetime of our licensed patents and/or applications and any patent rights we may own in the future. Patent agencies also require compliance with several procedural fee payments and other similar provisions during the patent application process. In many cases, an inadvertent lapse can be cured by payment of a late fee or by other means in accordance with the applicable rules. There are situations, however, in which non-compliance can result in abandonment or lapse of the patent or patent application, resulting in partial or complete loss of patent rights in the relevant jurisdiction. In such an event, we may not be able to prevent potential competitors from entering the market and this circumstance could have a material adverse effect on our business.

We may not be successful in obtaining necessary rights to any product candidates we may develop through acquisitions and licenses.

Many pharmaceutical companies, biotechnology companies, and academic institutions are competing with us and filing patent applications potentially relevant to our business. If patents issued to third parties contain valid claims that cover our product candidates or their manufacture or uses or assays relevant to our development plans, in order to avoid infringing these patents, we may be required or find it prudent to obtain licenses to these patents or to develop or obtain alternative technology. However, we may be unable to secure such licenses or otherwise acquire or license any compositions, methods of use, processes, or other intellectual property rights from third parties that we identify as necessary for product candidates we may develop. The licensing or acquisition of third-party intellectual property rights is a competitive area, and several more established companies may pursue strategies to license or acquire third-party intellectual property rights that we may consider attractive or necessary. These established companies may have a competitive advantage over us due to their size, capital resources and greater clinical development and commercialization capabilities. In addition, companies that perceive us to be a competitor may be unwilling to assign or license rights to us. We also may be unable to license or acquire third-party intellectual property rights on terms that would allow us to make an appropriate return on our investment or at all. If we are unable to successfully obtain rights to required third-party intellectual property rights or maintain the existing intellectual property rights we have, we may have to abandon development of the relevant program or product candidate.

In addition, if a patent is issued to a third-party that covers our product candidates or their manufacture or uses or assays related to our technology or product candidates and we cannot obtain a license to such patent, then we may not be in a position to commercialize such technology or product candidates unless we develop non-infringing alternative or successfully pursue litigation to have that patent invalidated or enter into a licensing arrangement with the patent holder. Any such litigation would be time consuming and costly, and the outcome would not be guaranteed. We cannot be certain that we would be able to enter into a licensing agreement with the patent holder on commercially reasonable terms, if at all. In either case, our business prospects could be materially adversely affected.

Intellectual property rights do not necessarily address all potential risks to our competitive advantage.

The degree of future protection afforded by our intellectual property rights is uncertain because intellectual property rights have limitations and may not adequately protect our business or permit us to maintain our competitive advantage. For example:

- others may be able to make products that are similar to any product candidates we may develop or utilize similar technology but that are not covered by the claims of the patents that we license or may own in the future;
- we, or our license partners or current or future collaborators, might not have been the first to make the inventions covered by the issued patent (if any) or pending patent application that we license or may own in the future;
- we, or our license partners or current or future collaborators, might not have been the first to file patent applications covering certain of our or their inventions;
- others may independently develop similar or alternative technologies or duplicate any of our technologies without infringing our owned or licensed intellectual property rights;
- it is possible that patent applications that we currently, or may in the future, own or license will not lead to issued patents;
- the claims of patents or patent applications that we may own or license may, when issued, not cover our product candidates;
- issued patents (if any) to which we may hold rights may be held invalid or unenforceable, including as a result of legal challenges by our competitors;
- our competitors might conduct research and development activities in countries where we do not have patent rights and then use the information learned from such activities to develop competitive products for sale in our major commercial markets;
- we may develop additional proprietary technologies that are not patentable;
- the patents of others may harm our business; and
- we may choose not to file a patent in order to maintain certain trade secrets or know-how, and a third-party may subsequently file a patent covering such intellectual property.

Should any of these events occur, they could have a material adverse effect on our business, financial condition, results of operations and prospects.

Risks Related to Our Business and Industry

Our relationships with health care professionals, institutional providers, principal investigators, consultants, customers and third-party payors are, and will continue to be, subject, directly and indirectly, to laws and regulations on health care fraud and abuse, false claims, commercialization expenditure tracking and disclosure, and health information privacy and security. If we are unable to comply, or have not fully complied, with such laws, we could face penalties, including, without limitation, civil, criminal, and administrative penalties, damages, fines, exclusion from government-funded health care programs and the curtailment or restructuring of our operations.

Although we do not currently have any products on the market, our business operations and activities may be directly or indirectly subject to various laws and regulations on health care fraud and abuse, false claims, commercialization expenditure tracking and disclosure, and health information privacy and security. If we obtain approval for any of our product candidates from the FDA or comparable other regulatory authorities and begin commercializing those products in geographies for which they have been approved, our potential exposure under such laws will increase significantly, and our costs associated with compliance with such laws are also likely to increase. These laws may impact, among other things, our current activities with principal investigators and research subjects, as well as proposed and future sales, marketing and education programs.

The laws that may affect our ability to operate include, but are not limited to:

- the federal Anti-Kickback Statute, which is an intent-based federal criminal statute that prohibits, among other things, persons from knowingly and willfully soliciting, offering, receiving or providing any remuneration (including any kickback, bribe or certain rebates), directly or indirectly, overtly or covertly, in cash or in kind, to induce or reward either the referral of an individual for, or the purchase, lease, order, recommendation or arranging of, any item or service, for which payment may be made, in whole or in part, under any U.S. federal health care program such as Medicare and Medicaid. A person or entity does not need to have actual knowledge of the federal Anti-Kickback Statute or specific intent to violate it in order to have committed a violation;
- the federal civil False Claims Act, which imposes civil penalties, including through civil whistleblower or qui tam actions, against individuals or entities for, among other things, knowingly presenting, or causing to be presented, false or fraudulent claims for payment to any U.S. federal health care program or knowingly making using or causing to be made or used a false statement or record material to payment of a false claim or avoiding, decreasing or concealing an obligation to pay money to the federal government;
- the federal criminal statute on false statements relating to health care matters, which prohibits knowingly and willfully falsifying, concealing or covering up a material fact or making any materially false, fictitious, or fraudulent statements or representations in connection with the delivery of or payment for health care benefits, items or services;

71 [Table of Contents](#)

- the federal criminal health care fraud statute, enacted as a part of the HIPAA, which imposes criminal liability for executing, or attempting to execute, a scheme or artifice to defraud any health care benefit program or to obtain, by means of false or fraudulent pretenses, representations, or promises, any of the money or property owned by, or under the custody or control of, any health care benefit program in connection with the delivery of or payment for healthcare benefits, items, or services;
- HIPAA, as amended by the Health Information Technology for Economic and Clinical Health Act of 2009 and their respective implementing regulations, which impose requirements on certain covered health care providers, health plans, and health care clearinghouses as well as their respective business associates that perform services for them that involve the use, or disclosure of individually identifiable health information, relating to the privacy, security and transmission of individually identifiable health information without appropriate authorization;
- certain U.S. state laws, as well as the General Data Protection Regulation, impose particular requirements regarding the processing of personal data especially when handling sensitive data, such as health information. Additionally, laws in all 50 U.S. states and the General Data Protection Regulation require in some circumstances businesses to notify relevant (Data Protection) Authorities and data subjects when a data breach has occurred;
- the federal Physician Payments Sunshine Act that requires “applicable manufacturers” of drugs, devices, biologics and medical supplies for which payment is available under Medicare, Medicaid or the State Children’s Health Insurance Program, among others, to track and report annually to the Department of Health and Human Services (for disclosure to the public) information related to certain payments and other transfers of value to “covered recipients”, which includes U.S.-licensed physicians, teaching hospitals and, for reports submitted on or after January 1, 2022, physician assistants, nurse practitioners, clinical nurse specialists, certified nurse anesthetists, and certified nurse midwives;
- federal consumer protection and unfair competition laws, which broadly regulate marketplace activities and activities that potentially harm consumers;
- the Foreign Corrupt Practices Act, or the FCPA, a U.S. law which regulates certain financial relationships with foreign government officials which could include, for example, certain medical professionals;
- analogous U.S. state law equivalents to the above federal laws, such as analogous state laws to the Anti-Kickback Statute and the False Claims Act, which may apply to items and services reimbursed by any third-party payor, including commercial insurers (i.e., so-called “all-payor anti-kickback laws”);
- U.S. state laws regulating pharmaceutical manufacturer compliance programs, commercialization-related activities, drug price transparency disclosures, and other practices; and
- analogous foreign laws and regulations (for example, with respect to Dutch law, including but not limited to the anti-bribery, anti-corruption, anti-fraud and anti-forgery provisions).

The Affordable Care Act, among other things, amended the intent standard of the federal Anti-Kickback Statute and criminal health care fraud statutes to a stricter standard such that a person or entity no longer needs to have actual knowledge of this statute or specific intent to violate it. In addition, the Affordable Care Act codified case law that a claim including items or services resulting from a violation of the federal Anti-Kickback Statute constitutes a false or fraudulent claim for purposes of the federal False Claims Act.

Efforts to ensure that our business arrangements will comply with applicable health care laws may involve substantial costs. It is possible that governmental and enforcement authorities will conclude that our business practices may not comply with current or future statutes, regulations, guidance or case law interpreting applicable fraud and abuse or other health care laws and regulations. If we are unable to comply, or have not fully complied, with such laws, we could face penalties, including, without limitation, civil, criminal, and administrative penalties, damages, fines, exclusion from government funded health care programs, such as Medicare and Medicaid, disgorgement, reputational harm, additional oversight and reporting obligations pursuant to a corporate integrity agreement or similar agreement to resolve allegations of non-compliance with applicable laws and regulations, and the curtailment or restructuring of our operations, any of which could adversely affect our ability to market our products, if approved, and adversely impact our financial results. Although effective compliance programs can mitigate the risk of investigation and prosecution for violations of these laws and regulations, these risks cannot be entirely eliminated. Any action against us for an alleged or suspected violation could cause us to incur significant legal expenses and could divert our management’s attention from the operation of our business, even if our defense is successful. If any of the physicians or other healthcare providers or entities with whom we expect to do business is found not to be in compliance with applicable laws, it may be costly to us in terms of money, time and resources, and each party may be subject to criminal, civil or administrative sanctions, including exclusions from government-funded healthcare programs.

In addition, the regulatory approval and commercialization of any of our product candidates outside the United States will also likely subject us to foreign equivalents of the health care laws mentioned above, among other foreign laws.

Rapid technological change could make our product candidates or technologies obsolete.

Pharmaceutical technologies and products are subject to rapid and significant technological change. We expect our competitors and physicians will develop new technologies, protocols and products that may render our product candidates and drug formulation technologies uncompetitive or obsolete. The products, protocols and technologies of our competitors and physicians may be more effective than the products, product candidates and drug formulation technologies developed by us. As a result, our product candidates may become obsolete before we recover expenses incurred in connection with their development or realize revenues from any commercialized product. We are aware of other pharmaceutical companies that are developing competing technologies, which could render our product candidates obsolete, which would have a material adverse effect on our business, financial condition, results of operations and prospects.

Our business may become subject to economic, political, regulatory and other risks associated with international operations.

Our business is subject to risks associated with conducting business internationally. Many of our suppliers and collaborative and clinical trial relationships are located in different countries. Accordingly, our future results could be harmed by a variety of factors, including, but not limited to:

- economic weakness and uncertainty, including rising inflation and interest rates, or political instability in particular economies and markets;
- differing regulatory requirements for drug approvals in different jurisdictions;
- differing jurisdictions could present different issues for securing, maintaining and/or obtaining freedom to operate in such jurisdictions;
- potentially reduced protection for intellectual property rights;
- difficulties in compliance with laws and regulations;
- changes in regulations and customs, tariffs and trade barriers;
- changes in currency exchange rates of the euro and currency controls;
- changes in a specific country's or region's political or economic environment;
- trade protection measures, import or export licensing requirements or other restrictive actions by various governments;
- differing reimbursement regimes and price controls in certain markets;
- negative consequences from changes in tax laws;
- compliance with tax, employment, immigration and labor laws for employees living or traveling abroad;
- workforce uncertainty in countries where labor unrest is more common than in the United States;
- difficulties associated with staffing and managing international operations, including differing labor relations;
- production shortages resulting from any events affecting raw material supply or manufacturing capabilities abroad; and
- business interruptions resulting from geopolitical actions, including war and terrorism, or natural disasters and weather-related events, including earthquakes, typhoons, floods and fires.

If we do not achieve our projected development goals in the timeframes we announce and expect, the commercialization of our products may be delayed and, as a result, our stock price may decline.

From time to time, we estimate the timing of the anticipated accomplishment of various scientific, clinical, regulatory and other product development goals, which we sometimes refer to as milestones. These milestones may include the commencement or completion of scientific studies and clinical trials and the submission of regulatory filings. From time to time, we may publicly announce the expected timing of some of these milestones. All of these milestones are and will be based on numerous assumptions. The actual timing of these milestones can vary dramatically compared to our estimates, in some cases for reasons beyond our control. If we do not meet these milestones as publicly announced, or at all, the commercialization of our products may be delayed or never achieved and, as a result, our stock price may decline.

Risks Related to Legal Compliance Matters

Because we and our suppliers are subject to environmental, health and safety laws and regulations, we may become exposed to enforcement, liability and substantial expenses in connection with compliance or remediation activities which may adversely affect our business and financial condition.

Our operations, including our research, development, testing and manufacturing activities, are subject to numerous environmental, health and safety laws and regulations, and possible permit obligations. These laws and regulations, including any permit obligations, govern, among other things, the controlled use, storage, handling, release and disposal of, and the maintenance of a registry for, hazardous materials and biological materials (goods and substances), chemicals, biological materials and biotechnology. Our operations produce hazardous waste products. We contract with licensed third parties for the disposal of these materials, substances and waste. Apart from compliance with the applicable regulations, we may not be able to eliminate the risk of contamination or injury from these materials completely. In the event of contamination or injury resulting from any use of hazardous materials, we could be held liable for any resulting damages. We also could incur significant costs associated with civil, administrative and/or criminal fines and penalties for failure to comply with all of these laws, regulations, and associated compliance activities.

The third parties with whom we contract to manufacture our product candidates are also subject to these and other environmental, health and safety laws and regulations. Liabilities they incur pursuant to these laws and regulations or any violations thereof could result in significant costs, significant administrative, civil and/or criminal fines, measurements and/or sanctions, or in certain circumstances, an

interruption in operations, any of which could adversely impact our business and financial condition, especially if we are unable to find an alternate supplier in a timely manner.

Regulatory and legislative bodies in the United States, Europe and elsewhere continue to focus on environmental policies relating to climate change, greenhouse gas emissions, carbon taxes and sustainable manufacturing, as well as human rights and equity matters, and disclosure regarding the foregoing, many of which policies may be ambiguous, inconsistent, dynamic or conflicting. We expect to experience increased restrictions, compliance costs, legal costs and expenses related to such new or changing legal or regulatory requirements, current and future environmental, health and/or safety compliance, remediation obligations and/or measurement obligations, in which case, our production and development efforts may be interrupted or delayed and our financial condition and results of operations may be materially adversely affected. Moreover, compliance with any such legal or regulatory requirements may require us to devote substantial time and attention to these matters. In addition, we could be subject to penalties or potential litigation if such laws and regulations are interpreted or applied in a manner inconsistent with our practices.

We, our employees, contractors, principal investigators, CROs, consultants, agents, vendors and collaboration partners may engage in misconduct or other improper activities, including noncompliance with regulatory standards and requirements, which could have a material adverse effect on our business.

We are exposed to the risk that we, our employees, contractors, principal investigators, CROs, consultants, agents, vendors and collaboration partners may engage in fraudulent conduct or other illegal activities. Misconduct by these parties could include intentional, reckless and negligent conduct or unauthorized activities that violate, among other things: (i) the legal requirements or other requirements of the FDA and comparable authorities, including those laws that require the reporting of true, complete and accurate information to such authorities; (ii) manufacturing standards; (iii) data privacy, security, fraud and abuse and other healthcare laws and regulations; or (iv) laws that require the reporting of true, complete and accurate financial information and data. In particular, our business activities may be subject to the FCPA and anti-bribery or anti-corruption laws, regulations or rules in other relevant countries for our activities, including the U.K. Bribery Act. The FCPA generally prohibits offering, promising, giving, or authorizing others to give anything of value, either directly or indirectly, to a non-U.S. government official in order to influence official action, or otherwise obtain or retain business. The FCPA also requires public companies to make and keep books and records that accurately and fairly reflect the transactions of the corporation and to devise and maintain an adequate system of internal accounting controls. Our business is heavily regulated and therefore involves significant interaction with public officials, including officials of non-U.S. governments. Additionally, in many other countries, the health care providers who prescribe pharmaceuticals are (directly or indirectly) employed by their government, and the purchasers of pharmaceuticals are government entities; therefore, our dealings with these prescribers and purchasers are subject to regulation under, but not limited to, the FCPA. Recently the SEC and Department of Justice have also increased their FCPA enforcement activities with respect to pharmaceutical companies.

Sales, commercialization and business arrangements in the healthcare industry are generally subject to extensive laws and regulations intended to prevent fraud, misconduct, bribery (e.g., kickbacks), self-dealing and other abusive practices. These laws and regulations may restrict or prohibit a wide range of pricing, discounting, marketing and promotion, sales commission, customer incentive programs and other business arrangements. Activities subject to these laws and regulations could also involve the improper use or misrepresentation of information obtained in the course of clinical trials or creating fraudulent data in our nonclinical studies or clinical trials, which could result in enforcement and/or sanctions and cause serious harm to our reputation.

Further, we are subject to trade and economic sanctions and embargoes on certain countries, persons, groups, entities, projects and/or activities, and export control regulations, applicable in the United States and other relevant countries for our activities.

There is no certainty that all of our employees, agents, contractors, principal investigators, CROs, consultants, vendors or (other) collaborators, or those of our affiliates, will comply with all applicable laws and regulations, particularly given the high level of complexity of these laws. It is not always possible to identify and deter misconduct by these parties and other third-parties, and the precautions we take to detect and prevent this activity may not be effective in controlling unknown or unmanaged risks or losses or in protecting us from governmental investigations or other actions, claims or lawsuits stemming from a failure to comply with such laws or regulations. If any such actions are instituted against us, and we are not successful in defending ourselves or asserting our rights, those actions could result, among others, in significant administrative, civil and criminal fines, disgorgement, and other sanctions, remedial measures or consequences, such as the closing down of our facilities, exclusion from participation in federal healthcare programs including (without limitation) Medicare and Medicaid, integrity and compliance oversight and reporting obligations, and prohibitions on the conduct of our business. Any such violations and consequences could materially damage our reputation, our brand, our international expansion efforts, our ability to attract and retain employees, and our business, prospects, operating results and financial condition.

Risks Related to Our Ordinary Shares and Our Status as a Public Company

An active trading market for our ordinary shares may not be sustainable. If an active trading market is not maintained, investors may not be able to resell their shares at or above the offering price and our ability to raise capital in the future may be impaired.

Although our ordinary shares are listed and being traded on Nasdaq, an active trading market for our shares may not be maintained. If an active market for our ordinary shares is not maintained, it may be difficult for you to sell shares you have purchased without depressing the market price for the shares or at all. An inactive trading market may also impair our ability to raise capital to continue to fund operations by selling shares and may impair our ability to acquire other companies or technologies by using our shares as consideration.

The ownership of our ordinary shares is concentrated, and your interests may conflict with the interests of our significant shareholders.

As of March 17, 2026, our significant shareholders beneficially owned ordinary shares representing approximately 43.97% of our outstanding ordinary shares. For more information regarding our significant shareholders, please see “ITEM 7. MAJOR SHAREHOLDERS AND RELATED PARTY TRANSACTIONS—A. Major Shareholders.”

These significant shareholders have in the past often taken a similar position and exercised influence over matters requiring the approval of our shareholders or our Board. They may act jointly or independently in the future and will continue to be able to exert significant influence over the outcome of matters requiring approval of our shareholders or our Board, including but not limited to the approval of significant transactions. Their interests may differ from the interests of other shareholders. Among other consequences, this concentration of ownership may have the effect of delaying or preventing a change in control and might therefore negatively affect the market price of our ordinary shares.

We do not currently intend to pay dividends on our securities and, consequently, your ability to achieve a return on your investment will depend on appreciation in the price of our ordinary shares. In addition, any distribution of dividends must be in accordance with the rules and restrictions applying under Dutch law.

We have not declared or paid any cash dividends on our ordinary shares since our incorporation and do not currently intend to pay cash dividends on our ordinary shares in the foreseeable future. We expect to retain all earnings, if any, generated by our operations for the development and growth of our business. Therefore, you are not likely to receive any dividends on your ordinary shares for the foreseeable future and the success of an investment in our ordinary shares will depend upon any future appreciation in our value. Consequently, investors may need to sell all or part of their holdings of ordinary shares after price appreciation, which may never occur, as the only way to realize any future gains on their investment. There is no guarantee that our ordinary shares will appreciate in value or even maintain the price at which our shareholders have purchased our ordinary shares. Investors seeking cash dividends should not purchase ordinary shares.

Under Dutch law, we may only pay dividends and other distributions from our reserves to the extent our shareholders' equity (*eigen vermogen*) exceeds the sum of the paid-up and called-up share capital plus the reserves required to be maintained by Dutch law or our Articles of Association and (if it concerns a distribution of profits) after adoption of our statutory annual accounts by our general meeting from which it appears that such distribution is allowed. Subject to those restrictions, any future determination to pay dividends or other distributions from our reserves will be at the discretion of the Board and will depend upon a number of factors, including our results of operations, earnings, cash flow, financial condition, future prospects, contractual restrictions, capital investment requirements, restrictions imposed by applicable law and other factors considered relevant by the Board.

Under our Articles of Association, our Board may decide that all or part of our profits shown in our adopted statutory annual accounts will be added to our reserves. After such reservation of any such profits, any remaining profits will be at the disposal of the general meeting at the proposal of our Board for distribution on our ordinary shares, subject to the applicable restrictions of Dutch law. Our Board is permitted, subject to certain requirements and applicable restrictions of Dutch law, to declare interim dividends without the approval of the general meeting. Dividends and other distributions shall be made payable no later than a date determined by the Board. Claims to dividends and other distributions not made within five years from the date that such dividends or distributions became payable will lapse and any such amounts will be considered to have been forfeited to us (*verjaring*).

In addition, exchange rate fluctuations may affect the amount of euros that we are able to distribute, and the amount in U.S. dollars that our shareholders receive upon the payment of cash dividends or other distributions we declare and pay in euros, if any. These factors could harm the value of our ordinary shares, and, in turn, the U.S. dollar proceeds that holders receive from the sale of our ordinary shares.

We have broad discretion in the use of our cash on hand and may invest or spend it in ways with which you do not agree and in ways that may not yield a return on your investment.

As of December 31, 2025, we had €291.7 million in cash and cash equivalents. Our management has broad discretion in the use of such cash and could spend it in ways that do not improve our results of operations or enhance the value of our ordinary shares. You will not have the opportunity to influence our decisions on how to use our cash on hand. The failure by our management to apply these funds effectively could result in financial losses that could harm our business, cause the price of our ordinary shares to decline and delay the development of our product candidates. Pending its use, we may invest our cash on hand in a manner that does not produce income or that loses value.

A significant portion of our ordinary shares may be sold into the public market in the near future, which could cause the market price of our ordinary shares to drop significantly, even if our business is doing well.

The market price of our ordinary shares may decline as a result of sales of a large number of our ordinary shares in the market or the perception that these sales may occur. These sales, or the possibility that these sales may occur, also might make it more difficult for us to sell equity securities in the future at a time and at a price that we deem appropriate.

We had a total of 65,407,822 ordinary shares outstanding as of March 17, 2026. If our existing shareholders sell substantial amounts of ordinary shares in the public market, or the market perceives that such sales may occur, the market price of our ordinary shares and our ability to raise capital through an issue of equity securities in the future could be adversely affected.

We are not obligated to, and do not, comply with all best practice provisions of the Dutch Corporate Governance Code.

We are subject to the Dutch Corporate Governance Code, or the DCGC. The DCGC contains both principles and best practice provisions on corporate governance that regulate relations between the Board and the general meeting and matters in respect of financial reporting, auditors, disclosure, compliance and enforcement standards. The DCGC is based on a “comply or explain” principle. Accordingly, companies are required to disclose in their annual reports, filed in the Netherlands, whether they comply with the provisions of the DCGC. If they do not comply with those provisions (for example, because of a conflicting Nasdaq requirement), the company is required to give the reasons for such noncompliance. The DCGC applies to Dutch companies listed on a government-recognized stock exchange, whether in the Netherlands or elsewhere, including Nasdaq. We do not comply with all best practice provisions of the DCGC. This may affect your rights as a shareholder, and you may not have the same level of protection as a shareholder in a Dutch company that fully complies with the DCGC.

As a foreign private issuer, we are permitted to adopt certain home country practices in relation to corporate governance matters that differ significantly from Nasdaq corporate governance listing standards. These practices may afford less protection to shareholders than they would enjoy if we complied fully with Nasdaq corporate governance listing standards.

We are a “foreign private issuer,” as defined in the SEC’s rules and regulations. The Nasdaq Listing Rules include certain accommodations in the corporate governance requirements that allow foreign private issuers to follow “home country” corporate governance practices in lieu of the otherwise applicable corporate governance standards of Nasdaq. The application of such exceptions requires that we disclose the Nasdaq Listing Rules that we do not follow and describe the Dutch corporate governance standards, including those as per the DCGC that we do follow in lieu of the relevant Nasdaq corporate governance standard. We intend to continue to follow Dutch corporate governance practices in lieu of the corporate governance requirements of Nasdaq in certain respects.

In accordance with Dutch law and generally accepted business practices, our Articles of Association do not provide quorum requirements generally applicable to general meetings of shareholders. To this extent, our practice varies from the requirement of Nasdaq Listing Rule 5620(c), which requires an issuer to provide in its bylaws for a generally applicable quorum, and that such quorum may not be less than one-third of the outstanding voting stock. Although we must provide shareholders with an agenda and other relevant documents for the general meeting of shareholders, Dutch law does not have a regulatory regime for the solicitation of proxies and the solicitation of proxies is not a generally accepted business practice in the Netherlands, thus our practice will vary from the requirement of Nasdaq Listing Rule 5620(b). As permitted by the listing requirements of Nasdaq, we have also opted out of the requirements of Nasdaq Listing Rule 5610, which requires an issuer to disclose within four business days any waiver of the code of conduct that has been granted to directors and officers. In addition, we have opted out of shareholder approval requirements, as included in the Nasdaq Listing Rules, for the issuance of securities in connection with certain events such as the acquisition of shares or assets of another company, the establishment of or amendments to equity-based compensation plans for employees, a change of control of us and certain private placements. To this extent, our practice varies from the requirements of Nasdaq Rule 5635, which generally requires an issuer to obtain shareholder approval for the issuance of securities in connection with such events. Accordingly, you may not have the same protections afforded to shareholders of companies that are subject to these Nasdaq requirements.

We are a foreign private issuer and, as a result, we are not subject to U.S. proxy rules and are subject to Exchange Act reporting obligations that, to some extent, are more lenient and less frequent than those of a U.S. domestic public company.

We report under the Exchange Act as a non-U.S. company with foreign private issuer status. Because we qualify as a foreign private issuer under the Exchange Act, we are exempt from certain provisions of the Exchange Act that are applicable to U.S. domestic public companies, including (i) the sections of the Exchange Act regulating the solicitation of proxies, consents or authorizations in respect of a security registered under the Exchange Act, (ii) the sections of the Exchange Act imposing liability for insiders who profit from trades made in a short period of time and (iii) the rules under the Exchange Act requiring the filing with the SEC of annual reports on Form 10-Q containing unaudited financial and other specified information, or current reports on Form 8-K, upon the occurrence of specified significant events. In addition, foreign private issuers are not required to file their annual report on Form 20-F until four months after the end of each fiscal year, while U.S. domestic issuers that are non-accelerated filers are required to file their annual report on Form 10-K within 90 days after the end of each fiscal year. Foreign private issuers are also exempt from the Regulation Fair Disclosure, aimed at preventing issuers from making selective disclosures of material information. As a result of the above, you may not have the same protections afforded to shareholders of companies that are not foreign private issuers.

We may lose our foreign private issuer status in the future, which could result in significant additional cost and expense.

While we currently qualify as a foreign private issuer, the determination of foreign private issuer status is made annually on the last business day of an issuer’s most recently completed second fiscal quarter. In the future, we would lose our foreign private issuer status if we fail to meet the requirements necessary to maintain our foreign private issuer status as of the relevant determination date. For example, if more than 50% of our securities are held by U.S. residents and more than 50% of either our directors or executive officers are residents or citizens of the United States, we could lose our foreign private issuer status.

The regulatory and compliance costs to us under U.S. securities laws as a U.S. domestic issuer may be significantly more than costs we incur as a foreign private issuer. If we are not a foreign private issuer, we will be required to file periodic reports and registration statements on U.S. domestic issuer forms with the SEC, which are more detailed and extensive in certain respects than the forms available to a foreign private issuer. We would be required under current SEC rules to prepare our financial statements in accordance with U.S. Generally Accepted Accounting Principles, or U.S. GAAP, rather than IFRS, as issued by IASB. Such conversion of our financial statements to U.S. GAAP would involve significant time and cost, and we would still be required to prepare financial statements in

accordance with IFRS as adopted by the European Union as required by Dutch law. In addition, we may lose our ability to rely upon exemptions from certain corporate governance requirements on United States stock exchanges that are available to foreign private issuers such as the ones described above and exemptions from procedural requirements related to the solicitation of proxies.

The rights of shareholders in companies subject to Dutch corporate law differ in material respects from the rights of shareholders of corporations incorporated in the United States.

Our corporate affairs are governed by our Articles of Association, our internal rules and policies and by Dutch law. There can be no assurance that Dutch law will not change in the future or that it will serve to protect shareholders in a similar fashion afforded under corporate law principles in the United States, which could adversely affect the rights of our shareholders. The rights of shareholders and the responsibilities of members of our Board are in many ways different from the rights and obligations of shareholders and a board of directors in companies governed by the laws of United States jurisdictions. In particular, pursuant to Dutch law members of the Board are required to act in the interest of the Company and the sustainable success of its business, with an aim to creating long-term value, taking into account the interests of its employees, clients, shareholders and other stakeholders of the Company, in all cases with due observation of the principles of reasonableness and fairness. It is possible that some of these stakeholders will have interests that are different from, or in addition to, your interests as a shareholder.

Dutch corporate law and our Articles of Association contain or may contain provisions that may discourage, delay or prevent a takeover attempt, which could adversely affect the price of our ordinary shares.

Under Dutch law, various protective measures are possible and permissible within the boundaries set by Dutch law and Dutch case law.

In this respect, certain provisions of our Articles of Association may make it more difficult for a third party to acquire control of us or effect a change in the composition of our Board. These include:

- a provision that our directors can only be appointed on the basis of a binding nomination prepared by our Board, which can only be overruled by the general meeting by a resolution adopted by a two-thirds majority of the votes cast, representing more than half of our issued share capital (in which case the Board shall make a new nomination);
- a provision that our directors may only be dismissed by the general meeting by a two-thirds majority of the votes cast representing more than half of our issued share capital, unless the dismissal is proposed by our Board in which latter case a simple majority of the votes cast would be sufficient;
- a provision which allows the most recent (former) chairman of our Board or our most recent (former) chief executive officer to be charged with our management if all of our directors are absent or incapacitated; and
- requirements that certain matters, including an amendment of our Articles of Association, may only be resolved upon by our general meeting if proposed by our Board.

In addition, Dutch law allows for staggered multi-year terms of our directors, as a result of which only part of our directors may be subject to appointment or re-appointment in any given year.

Furthermore, in accordance with the DCGC, shareholders who have the right to put an item on the agenda for our general meeting or to request the convening of a general meeting shall not exercise such rights until after they have consulted our Board. If exercising such rights may result in a change in our strategy (for example, through the dismissal of one or more of our directors), our Board must be given the opportunity to invoke a reasonable period of up to 180 days to respond to the shareholders' intentions. If invoked, our Board must use such response period for further deliberation and constructive consultation, in any event with the shareholder(s) concerned and exploring alternatives. At the end of the response time, our Board shall report on this consultation and the exploration of alternatives to our general meeting. The response period may be invoked only once for any given general meeting and shall not apply (i) in respect of a matter for which either a response period or a statutory cooling-off period (as discussed below) has been previously invoked or (ii) in situations where a shareholder holds at least 75% of our issued share capital as a consequence of a successful public bid.

Dutch cooling-off period in face of shareholder activism or hostile take-over.

Our Board can invoke a cooling-off period of up to 250 days when shareholders, using their right to have items added to the agenda for a general meeting or their right to request a general meeting, propose an agenda item for our general meeting to dismiss, suspend or appoint one or more directors (or to amend any provision in the Articles of Association dealing with those matters) or when a public offer for our company is made or announced without our support, provided, in each case, that our board of directors believes that such proposal or offer materially conflicts with the interests of our company and its business. During a cooling-off period, our general meeting cannot dismiss, suspend or appoint directors (or amend the provisions in the Articles of Association dealing with those matters) except at the proposal of our Board.

During a cooling-off period, our Board must gather all relevant information necessary for a careful decision-making process and at least consult with shareholders representing 3% or more of our issued share capital at the time the cooling-off period was invoked, as well as with our Dutch works council (if we or, under certain circumstances, any of our subsidiaries would have one). Formal statements expressed by these stakeholders during such consultations must be published on our website to the extent these stakeholders have approved that publication. Ultimately one week following the last day of the cooling-off period, our Board must publish a report in respect of its policy and conduct of affairs during the cooling-off period on our website. This report must remain available at our office for inspection

by shareholders and others with meeting rights under Dutch law and must be tabled for discussion at the next general meeting. Shareholders representing at least 3% of our issued share capital may request the Enterprise Chamber of the Amsterdam Court of Appeal, or the Enterprise Chamber (*Ondernemingskamer*) for early termination of the cooling-off period. The Enterprise Chamber must rule in favor of the request if the shareholders can demonstrate that:

- our Board, in light of the circumstances at hand when the cooling-off period was invoked, could not reasonably have concluded that the relevant proposal or hostile offer constituted a material conflict with the interests of our company and its business;
- our Board cannot reasonably believe that a continuation of the cooling-off period would contribute to careful policy-making; or
- other defensive measures, having the same purpose, nature and scope as the cooling-off period, have been activated during the cooling-off period and have not since been terminated or suspended within a reasonable period at the relevant shareholders' request (i.e., no 'stacking' of defensive measures).

Shareholders may not be able to exercise preemptive rights and, as a result, may experience substantial dilution upon future issuances of ordinary shares or grants of rights to subscribe for shares.

In the event of an issuance of our ordinary shares or a grant of rights to subscribe for ordinary shares, subject to certain exceptions, each shareholder will have a pro rata preemptive right in proportion to the aggregate nominal value of the ordinary shares held by such holder. These preemptive rights may be restricted or excluded by a resolution of the general meeting or by another corporate body designated by the general meeting. Our Board is authorized for a period of five years after our annual general meeting in 2024 to issue shares or grant rights to subscribe for shares up to our authorized share capital from time to time and to limit or exclude preemptive rights in connection therewith. This could cause existing shareholders to experience substantial dilution of their interest in us

U.S. investors may have difficulty enforcing civil liabilities against our company and directors and/or officers.

We are organized and existing under the laws of the Netherlands. As such, under Dutch private international law, the rights and obligations of our shareholders vis-à-vis the Company originating from Dutch corporate law and our articles of association, as well as the civil liability of our officers (*functionarissen*) (including our directors and executive officers) are governed in certain respects by the laws of the Netherlands.

We are not a resident of the United States, and our officers may also not all be residents of the United States. As a result, depending on the subject matter of the action brought against us and/or our officers, United States courts may not have jurisdiction. If a Dutch court has jurisdiction with respect to such action, that court will apply Dutch procedural law and Dutch private international law to determine the law applicable to that action. Depending on the subject matter of the relevant action, a competent Dutch court may apply another law than the laws of the United States.

Also, service of process against non-residents of the United States can in principle (absent, for example, a valid choice of domicile) not be effected in the United States.

Furthermore, most of our assets are located outside the United States. On the date of this Annual Report, (i) there is no treaty in force between the United States and the Netherlands for the reciprocal recognition and enforcement of judgments, other than arbitration awards, in civil and commercial matters and (ii) both the Hague Convention on Choice of Court Agreements (2005) and the Hague Judgments Convention (2019) have entered into force for the Netherlands, but have not entered into force for the United States. Consequently, a judgment rendered by a court in the United States will not automatically be recognized and enforced by the competent Dutch courts. However, if a person has obtained a judgment rendered by a court in the United States that is enforceable under the laws of the United States and files a claim with the competent Dutch court, the Dutch court will in principle give binding effect to that United States judgment if (i) the jurisdiction of the United States court was based on a ground of jurisdiction that is generally acceptable according to international standards, (ii) the judgment by the United States court was rendered in legal proceedings that comply with the Dutch standards of proper administration of justice including sufficient safeguards (*behoorlijke rechtspleging*), (iii) binding effect of such United States judgment is not contrary to Dutch public order (*openbare orde*) and (iv) the judgment by the United States court is not incompatible with a decision rendered between the same parties by a Dutch court, or with a previous decision rendered between the same parties by a foreign court in a dispute that concerns the same subject and is based on the same cause, provided that the previous decision qualifies for recognition in the Netherlands. Even if such a United States judgment is given binding effect, a claim based thereon may, however, still be rejected if the United States judgment is not or no longer formally enforceable. Moreover, if the United States judgment is not final (for instance when appeal is possible or pending) a competent Dutch court may postpone recognition until the United States judgment will have become final, refuse recognition under the understanding that recognition can be asked again once the United States judgment will have become final, or impose as a condition for recognition that security is posted.

A competent Dutch court may deny the recognition and enforcement of punitive damages or other awards. Moreover, a competent Dutch court may reduce the amount of damages granted by a United States court and recognize damages only to the extent that they are necessary to compensate actual losses or damages. Finally, there may be specific other instances, including pursuant to anti-boycott rules and regulations, where Dutch law prohibits the recognition and enforcement of a United States judgment. Thus, United States investors may not be able, or experience difficulty, to enforce a judgment obtained in a United States court against us or our officers.

Our articles of association designate specific courts as the exclusive forum for certain litigation that may be initiated by our shareholders, which could limit our shareholders' ability to obtain a favorable judicial forum for disputes with us or our directors, officers or employees.

Our Articles of Association provide for a federal forum selection provision stating that the sole and exclusive forum for any complaint asserting a cause of action arising under the Securities Act, to the fullest extent permitted by applicable law, shall be the U.S. federal district courts. In principle, our shareholders will be bound by this arrangement, provided, however, that our shareholders cannot and will not be deemed to have waived compliance with U.S. federal securities laws and the rules and regulations thereunder. Our federal forum selection provision may limit a shareholder's ability to bring a claim in a judicial forum that it finds favorable for disputes with us or our directors, officers or employees, which may discourage the filing of lawsuits against us or our directors, officers or employees, even though an action, if successful, might benefit our shareholders. In addition, while the Delaware Supreme Court ruled in March 2020 that federal forum selection provisions purporting to require claims under the Securities Act be brought in federal court are "facially valid" under Delaware law, there is uncertainty as to whether other courts, including the competent courts of the Netherlands and other courts within the United States, will enforce our federal forum selection provision. If our federal forum selection provision is found to be inapplicable or unenforceable in an action, we may incur additional costs associated with resolving such action in other jurisdictions and/or before other courts, which could adversely affect our results of operations and financial condition. Our federal forum provision may also impose additional litigation costs on our shareholders who assert that the provision is not enforceable or invalid. The competent courts of the Netherlands and the U.S. federal district courts may also reach different judgments or results than would other courts, including courts where a shareholder considering an action may be located or would otherwise choose to bring the action, and such judgments may be more or less favourable to us than our shareholders.

We may be a passive foreign investment company, or "PFIC," which could result in adverse U.S. federal income tax consequences to U.S. investors

Under the United States Internal Revenue Code of 1986, as amended, or the Code, we will be a PFIC for any taxable year in which, after the application of certain look-through rules with respect to subsidiaries, either (i) 75% or more of our gross income consists of "passive income," or (ii) 50% or more of the average quarterly value of our assets consists of assets that produce, or are held for the production of, "passive income." Passive income generally includes dividends, interest, certain non-active rents and royalties, and capital gains. Based on the nature of our business, our financial statements, our expectations about the nature and amount of our income, and our assets and activities, we do not believe we were a PFIC in 2025 and we do not expect to be a PFIC for our current taxable year or in the foreseeable future. In addition, we may, directly or indirectly, hold equity interests in other PFICs. Whether we or any of our subsidiaries will be a PFIC in 2025 or any future year is a factual determination that must be made annually at the close of each taxable year, and, thus, is subject to significant uncertainty; because a determination of whether a company is a PFIC must be made annually after the end of each taxable year and will depend on the composition of our income and assets and the market value of our assets from time to time, we cannot assure you that we will not be a PFIC for the current or any future taxable year. Accordingly, there can be no assurance that we will not be a PFIC in 2025 or any future taxable year.

If we are a PFIC for any taxable year during which a U.S. Holder (as defined in "Material United States and Dutch Income Tax Considerations—Material U.S. Federal Income Tax Considerations to U.S. Holders") holds our ordinary shares, we generally would continue to be treated as a PFIC with respect to that U.S. investor for all succeeding years during which the U.S. Holder holds our ordinary shares even if we ceased to meet the threshold requirements for PFIC status, unless certain exceptions apply. Such a U.S. Holder may be subject to adverse U.S. federal income tax consequences, including (i) the treatment of all or a portion of any gain on disposition as ordinary income, (ii) the application of a deferred interest charge on such gain and the receipt of certain dividends and (iii) compliance with certain reporting requirements. There is no assurance that we will provide information that will enable investors to make a qualified electing fund election, also known as a QEF Election, which could mitigate the adverse U.S. federal income tax consequences should we be classified as a PFIC.

Dutch and European insolvency laws are substantially different from U.S. insolvency laws and may offer our shareholders less protection than they would have under U.S. insolvency laws.

We are subject to Dutch insolvency laws in the event any insolvency proceedings are initiated against us, including, among other laws and regulations, Regulation (EU) 2015/848 of the European Parliament and of the Council of May 20, 2015 on insolvency proceedings. Should a court in another Member State of the European Union determine that our center of main interests, or COMI, is situated in that Member State, the courts in that Member State will in principle have jurisdiction over the insolvency proceedings initiated against us and the insolvency laws of that Member State will in principle apply to us, in accordance with and subject to such the aforementioned Regulation and the rules promulgated thereunder. Insolvency laws in the Netherlands or the relevant other Member State of the European Union, as applicable, may offer our shareholders less protection than they would have under U.S. insolvency laws and make it more difficult for our shareholders to recover the amount they could expect to recover in a liquidation or restructuring under U.S. insolvency laws.

General Risk Factors

Our internal computer systems, or those used by our clinical investigators, contractors or consultants, may fail or suffer security breaches.

Despite the implementation of security measures, our internal computer systems and those of our contractors and consultants are vulnerable to damage from cyber-attacks or intrusions, including by computer hackers, foreign governments, foreign companies or competitors, or may be breached by employee error, malfeasance or other disruption. A breakdown, invasion, corruption, destruction or interruption of critical information technology systems could negatively impact operations. If our systems or those of our contractors or consultants are damaged, fail to function properly or otherwise become unavailable, we may incur substantial costs to repair or replace

them, and we may experience loss of critical data and interruptions or delays in our ability to perform critical functions, which could adversely affect our business, financial condition or results of operations. For example, the loss of clinical trial data from clinical trials could result in delays in our regulatory approval efforts and significantly increase our costs to recover or reproduce the data. To the extent that any disruption or security breach were to result in a loss of, or damage to, our data or applications, or inappropriate disclosure of confidential or proprietary information, we could be subject to significant fines, penalties or other liabilities and the development and commercialization of our product candidates could be delayed, which could have a material adverse effect on our business, results of operations, financial condition and prospects. Some of the federal, state and foreign government requirements also include obligations of companies to notify regulators and/or individuals of security breaches involving personally identifiable information, which could result from breaches experienced by us or by our vendors, contractors, or organizations with which we have formed strategic relationships. Even though we may have contractual protections with such vendors, contractors, or other organizations, notifications and follow-up actions related to a security breach could impact our reputation and cause us to incur significant costs. Any failure to prevent or mitigate security breaches or improper access to, use, disclosure or other misappropriation of our data or consumers' personal data could result in significant liability under state (e.g., state breach notification and privacy laws), federal (e.g., the Health Insurance Portability and Accountability Act of 1996 (HIPAA) and the Health Information Technology for Economic and Clinical Health Act (HITECH Act)) and international laws (e.g., the GDPR). For example, a breach impacting personal data which is subject to the GDPR could result in fines of up to 20 million Euros or up to 4% of the total worldwide annual turnover of the preceding financial year, whichever is higher, as well as compensation claims for financial or non-financial loss by affected individuals. To the extent that any disruption or security breach resulted in a loss of or damage to our data or applications, or inappropriate disclosure of confidential or proprietary information, we could incur liability, and the further development of our product candidates could be delayed. For example, the loss of or damage to clinical trial data, such as from completed or ongoing clinical trials, for any of our product candidates would likely result in delays in our marketing approval efforts and significantly increased costs in an effort to recover or reproduce the data.

We may engage in strategic transactions that could impact our liquidity, increase our expenses and present significant distractions to our management.

We may consider strategic transactions, such as acquisitions of companies, asset purchases and out-licensing or in-licensing of intellectual property, products or technologies. Any future transactions could increase our near and long-term expenditures, result in potentially dilutive issuances of our equity securities, including our ordinary shares, or the incurrence of debt, contingent liabilities, amortization expenses or acquired in process research and development expenses, any of which could affect our financial condition, liquidity and results of operations. Additional potential transactions that we may consider in the future include a variety of business arrangements, including spin-offs, strategic partnerships, joint ventures, restructurings, divestitures, business combinations and investments. These transactions may never be successful and may require significant time and attention of management. In addition, the integration of any business that we may acquire in the future may disrupt our existing business and may be a complex, risky and costly endeavor for which we may never realize the anticipated benefits. Accordingly, although there can be no assurance that we will undertake or successfully complete any transactions of the nature described above, any transactions that we do complete could have a material adverse effect on our business, results of operations, financial condition and prospects.

The trading price of our ordinary shares has been, and may in the future be, highly volatile, which could result in substantial losses for holders of our ordinary shares.

Our share price has been highly volatile. In addition, because of our relatively small public float our ordinary shares may be less liquid than the ordinary shares of companies with broader public ownership and trading of a relatively small volume of our ordinary shares may have a greater impact on the market price for our ordinary shares than would be the case if our public float were larger. The market price of our ordinary shares may fluctuate significantly in response to numerous factors, many of which are beyond our control, including, but not limited to:

- results and timing of clinical trials of our and our competitors' product candidates;
- failure of any of our product candidates, if approved, to achieve commercial success;
- competition from existing products or new products that may emerge;
- issues in manufacturing our product candidates or future approved products;
- public concern relating to the commercial value or safety of any of our product candidates;
- disputes or other developments related to proprietary rights, including patents, litigation matters, and our ability to obtain intellectual property protection for our technologies;
- failure to adequately protect our trade secrets;
- additions and departures of key personnel;
- our inability to raise additional capital or the terms on which we raise it;
- period-to-period fluctuations in our financial condition and results of operations, including the timing of receipt of any milestone or other payments under commercialization or licensing agreements;
- public health crises, illnesses, epidemics or pandemics;
- changes in market conditions for biopharmaceutical stocks;
- changes in general market and economic conditions; and

- other risk factors discussed in this section.

In addition, the stock market in general has experienced substantial price and volume fluctuations that have often been unrelated to or disproportionate to the operating performance of particular companies affected. These broad market and industry factors may materially harm the market price of our ordinary shares, regardless of our operating performance. As we operate in a single industry, we are especially vulnerable to these factors to the extent that they affect our industry or our product candidates, or to a lesser extent our markets. In the past, securities class action litigation has often been initiated against companies and their management following periods of volatility in their stock price. This type of litigation could result in substantial costs and divert our management's attention and resources and could also require us to make substantial payments to satisfy judgments or to settle litigation.

If securities or industry analysts do not publish research or publish inaccurate or unfavorable research about our business, the price of our ordinary shares and trading volume could decline.

The trading market for our ordinary shares depends in part on the research and reports that securities or industry analysts publish about us or our business. If no or few securities or industry analysts cover us, the trading price for our ordinary shares would likely be negatively impacted. If one or more of the analysts who cover us downgrades our ordinary shares or publishes incorrect or unfavorable research about our business, the price of our ordinary shares would likely decline. If one or more of these analysts ceases coverage of us or fails to publish reports on us regularly, or downgrades our ordinary shares, demand for our ordinary shares could decrease, which could cause the price of our ordinary shares or trading volume to decline.

The requirements of being a public company may strain our resources, divert management's attention and affect our ability to attract and retain qualified board members.

As a public company, we are subject to the reporting requirements of the Exchange Act, the Sarbanes-Oxley Act and any rules promulgated thereunder, as well as the rules of Nasdaq. The requirements of these rules and regulations increase our legal and financial compliance costs, make some activities more difficult, time-consuming or costly and increase demand on our systems and resources. We will also expect to incur significantly higher legal, accounting and other expenses if we cease to qualify as a foreign private issuer.

The Sarbanes-Oxley Act requires, among other things, that we maintain effective disclosure controls and procedures and internal control over financial reporting. In order to maintain and, if required, improve our disclosure controls and procedures and internal control over financial reporting to meet this standard, significant resources and management oversight are required. We may need to hire additional accounting, finance and other personnel in connection with our continued efforts to comply with these requirements, and our management and other personnel will continue to devote a substantial amount of time towards maintaining compliance with these requirements. These rules and regulations can also make it more difficult for us to attract and retain qualified independent members of our board of directors. Additionally, these rules and regulations make it more difficult and more expensive for us to obtain director and officer liability insurance. We may be required to accept reduced coverage or incur substantially higher costs to obtain coverage. The increased costs of compliance with public company reporting requirements and our potential failure to satisfy these requirements can have a material adverse effect on our operations, business, financial condition or results of operations.

If our estimates or judgments relating to our critical accounting policies are based on assumptions that change or prove to be incorrect, our operating results could fall below the expectations of securities analysts and investors, resulting in a decline in the market price of our ordinary shares.

The preparation of financial statements in conformity with IFRS requires management to make estimates and assumptions that affect the amounts reported in our financial statements and accompanying notes. We base our estimates on historical experience and on various other assumptions that we believe to be reasonable under the circumstances, the results of which form the basis for making judgments about the carrying values of assets, liabilities, equity and expenses that are not readily apparent from other sources. It is possible that interpretation, industry practice and guidance may evolve over time. If our assumptions change or if actual circumstances differ from our assumptions, our operating results may be adversely affected and could fall below the expectations of securities analysts and investors, resulting in a decline in the market price of our ordinary shares.

Our disclosure controls and procedures may not prevent or detect all errors or acts of fraud.

We designed our disclosure controls and procedures to provide reasonable assurance that information we must disclose in reports we file or submit under the Exchange Act is accumulated and communicated to management, and recorded, processed, summarized and reported within the time periods specified in the rules and forms of the SEC. We believe that any disclosure controls and procedures, no matter how well conceived and operated, can provide only reasonable, not absolute, assurance that the objectives of the control system are met. These inherent limitations include the realities that judgments in decision-making can be faulty, and that breakdowns can occur because of simple error or mistake. Additionally, controls can be circumvented by the individual acts of some persons, by collusion of two or more people or by an unauthorized override of the controls. Accordingly, because of the inherent limitations in our control system, misstatements due to error or fraud may occur and not be detected.

4. Controls and Procedures

4.1 Risk management and control systems

As of December 31, 2025 our management, including our Chief Executive Officer and Chief Financial Officer performed an evaluation of the effectiveness of the design and operation of our disclosure controls and procedures (as defined in Rule 13a-15(e) under the Exchange Act). There are inherent limitations to the effectiveness of any disclosure controls and procedures system, including the possibility of human error and circumventing or overriding them. Even if effective, disclosure controls and procedures can provide only reasonable assurance of achieving their control objectives.

Based on such evaluation, our Chief Executive Officer and Chief Financial Officer concluded that our disclosure controls and procedures were effective as of December 31, 2025.

Management's Annual Report on Internal Control over Financial Reporting

Our management is responsible for establishing and maintaining adequate internal control over our financial reporting, as defined in Rule 13a-15(f) under the Exchange Act. Internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of our financial reporting and the preparation of our financial statements for external purposes in accordance with IFRS Accounting Standards (IFRS) as issued by International Accounting Standards Board. Internal control over financial reporting includes policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of our assets; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of our financial statements in accordance with IFRS, and that receipts and expenditures are being made only in accordance with authorizations of our management and directors; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of our assets that could have a material effect on our financial statements. Our management conducted an assessment of the effectiveness of our internal control over financial reporting based on the criteria set forth in Internal Control - Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission ("COSO"). Based on this assessment, our management concluded that, as of December 31, 2025, our internal control over financial reporting was effective.

Changes in Internal Control over Financial Reporting

The Board is responsible for establishing and maintaining adequate internal risk management and control systems. During the financial year to which this report relates, the Board has assessed the design and effectiveness of these systems and the results have been discussed with our audit committee, our non-executive directors and our external auditor.

4.2 In control statement

The Board recognises the inherent limitations of internal risk management and control systems. Whilst the Company continuously works towards improving its processes and procedures, these systems cannot provide absolute certainty that all risks have been identified or are effectively managed. The level of certainty that they provide is influenced by, among other matters, inherent limitations to risk management, business considerations such as the Company's risk appetite, the complexity of the operations of the Company's business, and the dynamic nature of the Company's business environment. Furthermore, certain risks are outside the Company's direct control, as they might materialise depending on action (or inaction) by third parties or the occurrence of external circumstances beyond the Company's influence.

On the basis of reports and information provided to the Board and its committees, the Board is of the opinion that, to the best of its knowledge:

- this report provides sufficient insight into any failings in the effectiveness of the Company's risk management and control systems;
- the Company's risk management and control systems provide reasonable assurance that the Company's financial reporting does not contain material inaccuracies;
- the Company's risk management and control systems provide at least limited assurance that the Company's sustainability reporting does not contain material inaccuracies;
- the Board, as at December 31, 2025 was not aware that the Company's internal risk management and control systems do not provide sufficient comfort that the operational and compliance risks identified in chapter 3.2 of this report are effectively managed in line with the Company's risk appetite, considering our risk appetite, the complexity of our business, inherent limitations to the Company's internal risk management and control systems and other disclosures on these systems in this report;

- based on the Company's state of affairs as at the date of this report, it is justified that the Company's financial reporting is prepared on a going concern basis; and
- this report states those material risks, operational, compliance and reporting risks and uncertainties that are relevant to the expectation of the Company's continuity for a period of twelve months after the date of this report.

Due to the inherent limitations in the Company's risk management and control systems, the above statement does not imply that these systems or the associated procedures within the Company provide certainty as to the realisation of strategic, operations, compliance and reporting objectives, nor that they can prevent all misstatements, inaccuracies, fraud, operational issues, and non-compliance with laws and regulations.

There were no material failings in, material changes to, and/or material improvements of the Company's risk management and control systems which have been observed, made and/or planned, respectively, during the fiscal year to which this report relates.

5. Corporate Governance

5.1 Dutch Corporate Governance Code

For the fiscal year to which this report relates, the Dutch Corporate Governance Code 2025 (the "**DCGC**") applied to the Company. The text of the DCGC can be accessed at <http://www.mccg.nl>.

Except as set out below, during the fiscal year to which this report relates, the Company complied with the principles and best practice provisions of the DCGC, to the extent that these are directed at the Board.

- Under the Company's articles of association, directors are to be appointed on the basis of a binding nomination prepared by the Board. This means that the nominee will be appointed to the Board, unless the general meeting of the Company (the "General Meeting") overrules the binding nature of the nomination (in which case a new nomination will be prepared for a subsequent General Meeting). The Company's articles of association provide that the General Meeting can only pass such resolution by at least a two-thirds majority of the votes cast, provided such majority represents more than half of the issued share capital. However, the DCGC recommends that the General Meeting should be capable of passing such a resolution by a simple majority of votes cast, representing no more than one-third of the issued share capital.
- Under the Company's articles of association, directors can only be dismissed by the General Meeting by simple majority of votes cast, provided that the Board proposes the dismissal. In other cases, the General Meeting can only pass such resolution by a two-thirds majority representing more than half of the issued share capital. The DCGC recommends that the General Meeting can pass a resolution to dismiss a director by simple majority, representing no more than one-third of the issued share capital.
- The DCGC recommends against providing equity awards as part of the compensation of a non-executive director. However, we deviate from this recommendation and grant equity awards to our non-executive directors, consistent with U.S. market practice.
- The Pharvaris N.V. 2021 Equity Incentive Plan allows us to set the terms and conditions of equity awards granted thereunder. Under the Plan, we may grant ordinary shares that are not subject to a lock-up period of at least five years after the date of grant, and we may grant options without restricting the exercisability of those options during the first three years after the date of grant. In those cases, this would cause additional deviations from the DCGC.
- The DCGC recommends that the Board appoints a separate department for the internal audit function. However, the Company did not have any such department in place in 2025. Instead, adequate alternative measures have been taken and the Company has improved on robust internal controls to safeguard our operations and financial reporting. These measures include:
 - Segregation of Duties: We have clearly defined roles and responsibilities to prevent any single individual from having excessive control over critical processes.
 - Regular Performance Reviews: All employees undergo periodic performance evaluations to ensure adherence to policies and procedures.
 - Review and Approval Processes: We have established rigorous approval workflows for financial transactions, ensuring proper oversight.
 - Education and Training: Our staff receives ongoing training on compliance, risk management, and ethical conduct.
 - Engaging External Consultants: Recognizing the importance of independent oversight, we have engaged and external consulting firm to help the Company achieve SOX 404 compliance. This firm assesses our internal controls over financial reporting framework. Their expertise provides an objective evaluation of our processes, obviating the need for an internal audit department.

- Testing and Verification: External consultants test transactions and review documentation to conclude on the design and execution of the controls.
- Recommendations: Based on findings of the aforementioned testing and verification, the external consultants provide recommendations for process improvements and risk mitigation.
- Reporting to the Audit Committee: the Audit Committee is regularly provided with reports on internal controls, enhancing transparency and accountability.
- The DCGC recommends that the Company should have a Stakeholder Dialogue Policy in place. The Company does not have a formal Stakeholder Dialogue Policy in place in because the Company has identified relevant stakeholders and the various channels for dialogue that have already been implemented by the Company. Based on the stakeholder initiatives already in place, the Company agreed that this Policy was not necessary at this time.
- The DCGC recommends that the Company should have a Diversity and Inclusion Policy in place. The Company does not have a formal Diversity and Inclusion Policy in place in which concrete targets in respect of gender diversity are included because of the following reasons:
 - Collecting broader D&I data creates substantial data privacy issues under General Data Protection Regulations;
 - The Company meets board diversity requirements under Nasdaq rules and Dutch law;
 - The Company's employees are 56% women and 44% men; and
 - Diversity is explicitly embedded in the Company's Core Values.

Despite not having a formal Diversity and Inclusion Policy, the Company does report on its gender diversity targets (see Chapter 5.8 – "Diversity").

5.2 Code of business conduct and ethics and other corporate governance practices

The Company has adopted a code of business conduct and ethics which can be accessed at <https://ir.pharvaris.com/corporate-governance/governance-documents>. The Company does not voluntarily apply other formal codes of conduct or corporate governance practices.

5.3 Risk management and control systems

See chapter 4.1 of this report for an overview of the main characteristics of the Company's risk management and control systems relating to the process of financial reporting by the Company and the Company's group companies whose financial information is included in the Consolidated Financial Statements.

5.4 General Meeting

5.4.1 Functioning of the General Meeting

Annually, at least one general meeting of the Company (the "**General Meeting**") must be held. This annual General Meeting must be held within six months after the end of the Company's fiscal year. A General Meeting must also be held within three months after the Board has decided that it is likely that the Company's equity has decreased to or below 50% of its paid up and called up share capital. In addition, without prejudice to the best practice provisions of the DCGC with respect to invoking a 'response period' or the provisions under Dutch law with respect to invoking a 'cooling-off period', a General Meeting must be held when requested by one or more shareholders and/or others with meeting rights under Dutch law collectively representing at least 10% of the Company's issued share capital, provided that certain criteria are met. Any additional General Meeting shall be convened whenever the Board would so decide. Each General Meeting must be held in Amsterdam, Arnhem, Assen, The Hague, Haarlem, 's-Hertogenbosch, Groningen, Leeuwarden, Lelystad, Leiden, Maastricht, Middelburg, Rotterdam, Schiphol (Haarlemmermeer), Utrecht or Zwolle. If and when allowed pursuant to applicable law, those who convene the General Meeting may also decide whether (and if so, under what conditions) the General Meeting shall also or exclusively be accessible through the use of electronic means.

For purposes of determining who have voting rights and/or meeting rights under Dutch law at a General Meeting, the Board may set a record date. The record date, if set, shall be the 28th day prior to that of the General Meeting. Those who have voting rights and/or meeting rights under Dutch law on the record date and are recorded as such in one or more registers designated by the Board shall be considered to have those rights at the General Meeting, irrespective of any changes in the composition of the shareholder base between the record date and the date of the General Meeting. The Company's articles of association require shareholders and others with meeting rights under Dutch law to notify the Company of their identity and their intention to attend the General Meeting. This notice must be received by the Company ultimately on the seventh day prior to the General Meeting, unless indicated otherwise when such General Meeting is convened.

5.4.2 Powers of the General Meeting

All powers that do not vest in the Board pursuant to applicable law, the Company's articles of association or otherwise, vest in the General Meeting. The main powers of the General Meeting include, subject in each case to the applicable provisions in the Company's articles of association:

- a) the appointment, suspension and dismissal of Directors;

- b) the approval of certain resolutions of the Board concerning a material change to the identity or the character of the Company or its business;
- c) the reduction of the Company's issued share capital through a decrease of the nominal value, or cancellation, of shares in its capital;
- d) the adoption of the Company's statutory annual accounts;
- e) the appointment of the Dutch independent auditor to examine the Company's statutory annual accounts;
- f) amendments to the Company's articles of association;
- g) approving a merger or demerger by the Company, without prejudice to the authority of the Board to resolve on certain types of mergers and demergers if certain requirements are met; and
- h) the dissolution of the Company.

In addition, the General Meeting has the right, and the Board must provide, any information reasonably requested by the General Meeting, unless this would be contrary to an overriding interest of the Company.

5.4.3 Shareholder rights

Each share in the Company's capital carries one vote. Shareholders, irrespective of whether or not they have voting rights, have meeting rights under Dutch law (including the right to attend and address the General Meeting, subject to the concept of a record date as described in chapter 5.4.1). Furthermore, each share in the Company's capital carries an entitlement to dividends and other distributions as set forth in the Company's articles of association. Pursuant to the Company's articles of association, any such dividend or other distribution shall be payable on such date as determined by the Board and the Board may also set a record date for determining who are entitled to receive any such dividend or other distribution (irrespective of subsequent changes in the shareholder base). The record date for dividends and other distributions shall not be earlier than the date on which the dividend or other distribution is announced. In addition, shareholders have those rights awarded to them by applicable law.

5.5 Board

The Board is charged with managing the Company's affairs, which includes setting the Company's policies and strategy. Our executive director is charged primarily with the Company's day-to-day business and operations and the implementation of the Company's strategy. Our non-executive directors are charged primarily with the supervision of the performance of the duties of the Board. Each director is charged with all tasks and duties of the Board that are not delegated to one or more other specific directors by virtue of Dutch law, the Company's articles of association or any arrangement catered for therein (e.g., the internal rules of the Board). In performing their duties, our directors shall be guided by the interests of the Company and of the business connected with it.

As at December 31, 2025, the Board was composed as follows, which are all current directors on the Board of the date of this report:

Name and age	Gender identity	Nationality	Date of initial appointment	Expiration of current term of office	Attendance rate at meetings of the board
Berndt Modig (67) *	M	Swedish	September 30, 2015	At the end of the AGM to be held in 2028	100%
Hans Schikan (67) **	M	Dutch	August 28, 2019	At the end of the AGM to be held in 2028	100 %
David Meeker (71) **	M	American	January 1, 2021	At the end of the AGM to be held in 2029	100 %
Robert Glassman (64) **	M	American	January 1, 2021	At the end of the AGM to be held in 2029	100%
Viviane Monges (62) **	F	French	June 29, 2021	At the end of the AGM to be held in 2029	100 %
Elisabeth Björk (64) **	F	Swedish	December 1, 2021	At the end of the AGM to be held in 2026	100 %

* Executive director

** Non-executive director

Board of Directors

Berndt Modig

Mr. Modig co-founded Pharvaris and has served as Chief Executive Officer since its inception. Mr. Modig is also a director of the Company. Prior to co-founding the Company, Mr. Modig served as Chief Financial Officer of Prosensa Holding N.V., a biopharmaceutical company focusing on novel RNA modulating treatments for rare diseases like Duchenne muscular dystrophy, from March 2010 through its IPO on the Nasdaq in 2013 until its acquisition by BioMarin Pharmaceutical Inc. in January 2015.

From October 2003 to November 2008, Mr. Modig was Chief Financial Officer at Jerini AG through its IPO on the Frankfurt exchange in 2005 and sale to Shire plc in 2008. Jerini developed and launched icatibant for the treatment of HAE, now currently marketed by Takeda Pharmaceuticals under the FIRAZYR brand name. Before Jerini AG, Mr. Modig served as Chief Financial Officer at Surplex

AG from 2001 to 2003 and as Finance Director Europe of U.S.-based Hayward Industrial Products Inc. from 1999 to 2001. In previous positions, Mr. Modig was a Partner in the Brussels-based private equity firm Agra Industria from 1994 to 1999 and a Senior Manager in the Financial Services Industry Group of Price Waterhouse LLP in New York from 1991 to 1994.

Hans Schikan, Pharm.D.

Mr. Schikan is a co-founder of the Company and has been a director since August 2019. Mr. Schikan is the former CEO of Prosensa Holding N.V. (Nasdaq: RNA), a biopharmaceutical company focusing on novel RNA modulating treatments for rare diseases including Duchenne muscular dystrophy, from January 2009 through its IPO on the Nasdaq in 2013 until its acquisition by BioMarin Pharmaceutical Inc. in January 2015.

Mr. Schikan was previously at Genzyme, most recently serving as VP for Global Marketing and Strategic Development of Genzyme's product portfolio for rare genetic diseases. He is currently Chairman of the Board of Vicore Pharma (STO: VICO) and Microbiotica, and Board Member of Organon N.V. Previously, he served on the boards of Sobi (STO: SOBI), Hansa Biopharma (STO: HNSA), Wilson Therapeutics (STO: WTX) (acquired by Alexion), Therachon (acquired by Pfizer), VectivBio (Nasdaq: VECT) (acquired by IronWood), Asceneuron, Complix and InteRNA. Mr. Schikan has a Pharm.D. degree from Utrecht University.

David Meeker, M.D.

Dr. Meeker has been a director since January 2021. Dr. Meeker is the Chairman of the Board of Directors, President and Chief Executive Officer of Rhythm Pharmaceuticals, Inc. Prior to joining Rhythm Pharmaceuticals, Dr. Meeker served as President and Chief Executive Officer of KSQ Therapeutics, Inc. from 2017 to 2020. Prior to joining KSQ, Dr. Meeker worked at Sanofi Genzyme from 2011 to 2017, in a variety of roles, including as President and Chief Executive Officer of Genzyme, a Sanofi Company, as a member of Sanofi's Executive Committee, and as Executive Vice President and Head of Sanofi Genzyme, Sanofi's specialty care unit with responsibility for rare diseases, multiple sclerosis, oncology and immunology franchises. Prior to joining Genzyme, Dr. Meeker was Director of the Pulmonary Critical Care Fellowship at the Cleveland Clinic. Dr. Meeker has served as Chair of Trevi Therapeutics since 2017 and as a member of the board of directors for Kardigan since 2024. He previously served as a Director of MyoKardia, Inc. until its acquisition by Bristol Myers Squibb.

Dr. Meeker holds a medical degree from the University of Vermont Medical School and completed the Advanced Management Program at Harvard Business School in 2000.

Robert Glassman, M.D.

Dr. Glassman has been a director since January 2021. Since July 2022, Dr. Glassman has served as the Executive Vice President, Search & Evaluation at Enavate Sciences, a \$600M private equity fund that is a subsidiary of Patient Square Capital. Dr. Glassman also serves as a board member for EluraBio and he is an advisor at Centrexion.

Dr. Glassman is an industry veteran with nearly 30 years of healthcare leadership and investment experience. Most recently, he was a venture partner in public equity at OrbiMed Advisors, returning to the firm after serving as a private equity partner. Previously, he worked as a senior investment banking professional for over seventeen years across Credit Suisse, Merrill Lynch, Bank of America, most recently serving as Vice Chairman of the Global Health Care Investment Banking division at Credit Suisse. Earlier in his career, Dr. Glassman oversaw healthcare investments at Merrill Lynch Global Private Equity and was a consultant within McKinsey & Company's Pharmaceutical and Medical Products practice. Dr. Glassman was a board-certified hematologist-oncologist and remains on the faculty of Weill Cornell as a Clinical Assistant Professor of Medicine. He also spent several years as a basic science investigator at Rockefeller University in the laboratory of Hidesaburo Hanafusa, where he received Howard Hughes Medical Institute and American Cancer Society awards. Dr. Glassman earned his A.B. from Harvard College and an M.D. from Harvard Medical School.

Elisabeth Björk, M.D.

Dr. Björk has been a director since December 2021. Dr. Björk was Senior Vice President, Late-stage Development, Cardiovascular, Renal and Metabolism (CVRM), BioPharmaceuticals R&D at AstraZeneca and led the global development of medicines within this area for over 10 years. Throughout her career at AstraZeneca which began in 2002, she has gained broad drug development experience covering clinical development phase I-IV, large outcomes programs, major global filings and health authority interactions, and commercial strategy/implementation. Dr. Björk is an endocrinologist by training and an associate professor of medicine at Uppsala University, Sweden. She is also a board member of Rocket Pharmaceuticals, Vicore Pharma AB, Camurus AB, Hansa BioPharma AB, Betula Consulting AB, and NodThera.

Viviane Monges

Ms. Monges has been a director since July 2021 and serves as the Chair of the Audit Committee. She serves as a non-executive director at Ferring Pharmaceuticals, ADC Therapeutics, BioMerieux and Novo Holdings. Prior to these roles, Ms. Monges was Chair of the board of EUROAPI, and she held a position as VP of Finance of Nestlé's Business Excellence Division. Prior to that, she served as the Global CFO of the OTC division at Novartis. Ms. Monges also served as CFO of European Pharmaceuticals at Wyeth/Pfizer and as CFO of the Global Pharmaceutical Business unit of Wyeth/Pfizer. She holds an MBA from Ecole Supérieure de Commerce de Paris.

5.6 Committees

5.6.1 General

The Board has established an audit committee, a compensation committee, a nomination and corporate governance committee and a science and technology committee. Each committee operates pursuant to its charter.

As at December 31, 2025, the committees were composed as follows:

Name	Audit committee (and attendance rate)	Compensation committee (and attendance rate)	Nomination and corporate governance committee (and attendance rate)
Elisabeth Björk, M.D.			X (100% attendance)
Robert Glassman M.D.	X (100% attendance)	X (100% attendance)	
David Meeker, M.D.		X (100% attendance)	X* (100% attendance)
Viviane Monges	X* (100% attendance)		X (100 % attendance)
Hans Schikan, Pharm.D.	X (100% attendance)	X* (100% attendance)	

* Chairperson

5.6.2 Audit Committee

The responsibilities of our audit committee include:

- a) monitoring the Board with respect to (i) the relations with, and the compliance with recommendations and follow-up of comments made by, the Company's internal audit function and the Dutch independent auditor, and, if relevant, other external parties involved in the audit of the Company's sustainability reporting (ii) the Company's funding, (iii) the application of information and communication technology by the Company, including risks relating to cybersecurity and (iv) the Company's tax policy;
- b) the Company's compliance with applicable legal and regulatory requirements;
- c) the operation of the Company's code of business conduct and ethics and its other internal policies;
- d) issuing recommendations concerning the appointment and the dismissal of the head of the Company's internal audit function and reviewing and discussing the performance of the Company's internal audit function;
- e) reviewing and discussing the Company's audit plan with the Company's internal audit function and the Dutch independent auditor;
- f) reviewing and discussing the audit results with the Company's internal audit function and the Dutch independent auditor, including (i) flaws in the effectiveness of the Company's internal risk management and control systems, (ii) findings and observations with a material impact on the Company's risk profile and (iii) failing in the follow-up of recommendations made previously by the Company's internal audit function;
- g) reviewing and discussing with the Dutch independent auditor, at least annually, (i) the scope and materiality of the Company's audit plan and the principal risks of the Company's annual financial reporting identified in such audit plan, (ii) the findings and outcome of the Dutch independent auditor of the Company's financial statements and its management letter and (iii) significant findings from the audit of the Company's financial statements and any problems or difficulties encountered, including restrictions on the scope of the Dutch independent auditor's activities or on access to requested information, as well as significant disagreements with the Company's management;
- h) receiving from the Dutch independent auditor a formal written statement at least annually delineating all relationships between the Dutch independent auditor and the Company consistent with applicable requirements of the Public Company Accounting Oversight Board regarding the Dutch independent auditor's communications with the audit committee concerning independence;
- i) determining whether and, if so, how the Dutch independent auditor should be involved in the content and publication of financial reports other than the Company's financial statements;
- j) resolving disagreements between the Company's management and the Dutch independent auditor regarding the Company's financial reporting;
- k) reviewing and discussing with the Dutch independent auditor any audit problems or difficulties and the response of the Company's management thereto, including those matters required to be discussed with the audit committee by the Dutch independent auditor pursuant to established auditing standards, including (i) restrictions on the scope of the Dutch independent auditor's activities or on access to requested information, (ii) accounting adjustments that were noted or proposed

by the Dutch independent auditor but were "passed" as immaterial or otherwise, (iii) communications between the audit team and the audit firm's national office regarding auditing or accounting issues presented by the engagement, and (iv) management or internal control letters issued, or proposed to be issued, by the Dutch independent auditor;

- l) reviewing and discussing the effectiveness of the design and operation of the Company's risk management and control systems with the Board, the CEO and the CFO, including (i) identified material failings, deficiencies or material weaknesses in the Company's internal risk management and control systems, including whether there are significant deficiencies and material weaknesses in the design or operation of the Company's internal risk management and control systems which are reasonably likely to affect the Company's ability to record, process, summarize and report financial information and fraud involving the Company's management or other employees with a significant role in the design or operation of the Company's internal risk management and control systems and (ii) material changes made to, and material improvements planned for, the Company's internal risk management and control systems;
- m) assisting the Company in preparing the disclosure to be included in the Company's applicable filings as required by the Securities Act, the Exchange Act and their related rules;
- n) advising the Board regarding the Dutch independent auditor's nomination for (re)appointment or dismissal (including confirmation and evaluation on the rotation of the audit partners on the audit engagement team as required by applicable law and NASDAQ requirements) and preparing the selection of the Dutch independent auditor for such purpose, as relevant;
- o) reviewing and discussing the terms of engagement of the Dutch independent auditor to audit the Company's financial statements, to prepare or issue an audit report, or to perform other audit, review or attest services, submitting proposals to the Board concerning the Dutch independent auditor's engagement to audit the Company's financial statements, in each case including the scope of the audit, the materiality standard to be applied and the Dutch independent auditor's compensation and causing the Company, without further action, to pay the compensation of the Dutch independent auditor as approved by the audit committee;
- p) engagement of such independent legal, accounting and other advisors as the audit committee deems necessary or appropriate to carry out its responsibilities, including causing the Company, without further action, to pay the reasonable compensation of such advisors as approved by the audit committee;
- q) causing the Company to pay, without further action, the ordinary administrative expenses of the audit committee that are necessary or appropriate in carrying out its responsibilities;
- r) preparing the audit committee report that the SEC rules require to be included in the Company's annual proxy statement (if and when the Company would become subject to those rules);
- s) establishing policies for the Company's hiring of current or former employees of the Dutch independent auditor;
- t) establishing procedures for (i) the receipt, retention and treatment of complaints received by the Company regarding accounting, internal accounting controls or auditing matters and (ii) the confidential, anonymous submission by employees of the Company of concerns regarding questionable accounting or auditing matters;
- u) reviewing potential conflicts of interest involving our directors, including whether they may take part in the deliberations and the decision-making on any issue as to which there may be a conflict;
- v) reviewing, approving and overseeing any transaction between the Company and any related persons on an ongoing basis, in accordance with the Company's policies and procedures; and
- w) developing and recommending to the Board the Company's related person transaction policy.

During the fiscal year to which this report relates, our audit committee met four times in order to carry out its responsibilities. The main items discussed at those meetings included the internal control remediation plan and follow-up on this during 2025, the (interim) financial statements, the actual financial results of each of the quarters, securities filings and financial press releases as well as the audit approach and the budget for 2025 and partly 2026.

5.6.3 Compensation committee

The responsibilities of our compensation committee include:

- a) reviewing and evaluating the Company's compensation policy (the "**Compensation Policy**") and benefits policies generally, including the review and recommendation of incentive-compensation and equity-based plans of the Company, as well as the compensation of the CEO and the Company's other executive officers;
- b) evaluate at least annually the CEO's performance in light of those goals and objectives, and make recommendations to the Board regarding the CEO's compensation level based on this evaluation;
- c) submitting proposals to the Board concerning changes to Compensation Policy, as relevant;
- d) submitting proposals to the Board concerning the compensation of the Company's executive officers and the individual directors, at least covering (i) the compensation structure, (ii) the amount of the fixed and variable compensation components, (iii) the applicable performance criteria (iv) the scenario analyses that have been carried out (v) the pay ratios within the Company's group, (vi) if it concerns the compensation of a director, the views of the director concerned with regard to the

- amount and structure of his own compensation and (vii) if considered appropriate by the Board or the compensation committee, the views of the executive officer concerned with regard to the amount and structure of his own compensation;
- e) the review and assessment of risks arising from the Compensation Policy and practices and whether any such risks are reasonably likely to have a material adverse effect on the Company;
 - f) the preparation of the Company's compensation report for the Board;
 - g) set the composition of the peer company group used for market comparison for executive compensation;
 - h) the preparation of the compensation committee's report required by SEC rules or the rules of any other regulatory body;
 - i) to review and recommend to the Board for approval the adoption, amendment or modification of a "clawback" policy that allows the Company to recoup incentive compensation in compliance with Section 10D of the Securities Exchange Act of 1934, as amended, the rules promulgated thereunder, and the NASDAQ listing standards, and to administer the "clawback" policy in accordance with its terms ; and
 - j) the retention of or obtaining advice from a compensation consultant, legal counsel or other advisor as the compensation committee deems necessary or appropriate to carry out its responsibilities, including the appointment of such consultant, counsel or advisor and the ability to cause the Company, without further action, to pay with Company funds the reasonable compensation of such consultant, counsel or advisor as approved by the compensation committee, provided, however, that (i) in retaining or obtaining the advice of such consultant, counsel or advisor, other than in-house legal counsel, the compensation committee shall take into consideration the factors affecting independence and conflicts of interest required by applicable SEC rules and NASDAQ rules and (ii) the compensation committee will be responsible for the oversight of the work of any such consultant, counsel or advisor.

During the fiscal year to which this report relates, our compensation committee met four times in order to carry out its responsibilities. The main items discussed at those meetings included the performance and terms and conditions of our executive compensation, the long-term incentive grants analysis and recommendations and the non-executive salary increase and bonus proposal.

5.6.4 Nomination and corporate governance committee

The responsibilities of our nomination and corporate governance committee include:

- a) drawing up selection criteria and appointment procedures for our directors;
- b) reviewing the size and composition of the Board and submitting proposals for the composition profile of the Board;
- c) making recommendations to the Board as to the determination of independence of non-executive directors;
- d) reviewing the functioning of individual directors and reporting on such review to the Board;
- e) drawing up a plan for the succession of our directors;
- f) submitting proposals for (re)appointment of our directors;
- g) supervising the policy of the Board regarding the selection criteria and appointment procedures for the Company's senior management;
- h) overseeing the self-evaluation of the Board and its committees to determine whether they are functioning effectively;
- i) reviewing and discussing with management disclosure of the Company's corporate governance practices, including information regarding the operations of the corporate governance committee and other Board committees, director independence and the director nominations process, and to recommend that this disclosure be included in the Company's annual report on Form 20-F;
- j) developing and implementing the goals the Company may establish from time to time with respect to its environmental, social and governance and sustainability matters, and provide guidance to the Board on such matters;
- k) developing the Company's code of conduct, corporate governance guidelines and other corporate governance policies, including, at least annually, reviewing and reassessing the adequacy of the Company's code of conduct and recommending any proposed changes to the Board;
- l) reviewing and making recommendations to the Board relating to succession planning for the CEO, including in the event of an emergency, and reviewing development plans for those individuals identified as potential successors to the CEO; and
- m) reviewing and making recommendations relating to talent management and succession planning for senior executive officers other than the CEO.

During the fiscal year to which this report relates, our nomination and corporate governance committee met four times in order to carry out its responsibilities. The main items discussed at those meetings included a regulatory update and committee governance.

5.6.5 Science and technology committee

The overall purpose of the science and technology committee is to technically review all research, discovery and development plans and activities. The science and technology committee assesses the opportunities and risks associated with such activities in the context of the Company's overall strategy in place at the time of the respective review as well as in the context of the respective competitive environment. In this context, it is not the role of the science and technology committee to serve as a review and governance body on the critical path for reaching decisions on the Company's R&D plans and activities, but merely to review decisions taken by the Board committees or the executive director(s) and to provide its view on associated opportunities and risks to the non-executive directors.

During the fiscal year to which this report relates, our science and technology committee met eight times in order to carry out its responsibilities. The main items discussed at the meetings included submission strategy for on demand, early portfolio and LCM strategy.

5.7 Evaluation

During the fiscal year to which this report relates, the Board has evaluated its own functioning, the functioning of the committees of the Board and that of the individual directors on the basis of a questionnaire approved by the Nominating and Governance committee. The Company conducted interviews with each member of the Board utilizing the approved questionnaire. As part of these evaluations, the Board has considered (i) substantive aspects, mutual interaction, (ii) events that occurred in practice from which lessons may be learned and (iii) the desired profile, composition, competencies and expertise of the Board. These evaluations are intended to facilitate an examination and discussion by the Board of its effectiveness and areas for improvement. The Board conducted a self-evaluation in 2025 and reviewed the findings at the Company's December Board meeting. The overall assessment from the Board members is that the Board is performing well, has constructive discussions and is effective in its decision-making. The Board questionnaire addressed four themes:

- Composition of the Board
- Functioning of the Board
- Access to Information
- Functioning of the Committees

On the basis of these evaluations, the Board has concluded that the Board is functioning properly.

5.8 Diversity

Diversity Policy. The Company does not have a Diversity and Inclusion Policy that is fully responsive to the DCGC; however, the Company has diversity objectives with respect to the composition of the Board as part of the Company's policy regarding the qualification and nomination of director candidates. The Company is committed to supporting, valuing and leveraging diversity and the Company recognizes and welcomes diversity with respect to gender, age, race, ethnicity, nationality, sexual orientation and other important cultural differences. In its evaluation of new candidates, the nominating and governance committee may consider race or ethnicity, nationality, gender, sexual orientation, age, background, education skills and experience, as well as the restrictions, requirements and recommendations concerning those matters under applicable law, Nasdaq rules or best practice provisions of the Dutch Corporate Governance Code in relation to the full Board and/or individual directors or director candidates. However, the Company also believes that there is a fine line between diversity and unintentional discrimination. For that reason, the importance of diversity, in and of itself, should not set aside the overriding principle that someone should be recommended, nominated and appointed for being "the right person for the job."

Although the Company has not yet set specific targets with respect to certain elements of diversity, the Company believes that it is important for the Board and its senior management to represent a diverse composite mix of personal backgrounds, experiences, qualifications, knowledge, abilities and viewpoints, consistent with the principles outlined above. The Company also seeks to combine the skills and experience of long-standing members of the Board and its senior management with the fresh perspectives, insights, skills and experiences of new candidates from time to time. To further increase the range of viewpoints, perspectives, talents and experience, the Company strives for a mix of ages among the Board and its senior management, but also does not set a specific target in this respect.

Diversity Targets. As of December 31, 2025, 4 out of 6 of the Directors were male and 2 out of 6 of the Directors were female. To the extent possible and practicable, the Company intends for the composition of the Board to remain as balanced as reasonably possible, provided for a minimum target of at least 30% of the directors to be male and at least 30% of them to be female.

The Company believes that the current composition of its Board has achieved the Company's diversity objectives, as outlined above, including the Company's diversity objective with respect to gender.

In connection with the operation of the Company's diversity objectives, the Company has defined its senior management. The Company's senior management consists of senior professionals either holding an Officer role at Pharvaris, overseeing a department and relevant department budget and reporting to the CEO or being the CEO or is the Principal Accounting Officer/Head of SOX. As of December 31, 2025, 4 out of 8 senior management members were male and 4 out of 8 senior management members were female. To the extent reasonable and practicable, the Company intends for the composition of senior management to be at least 30% female. Based on the size of our senior management, the Company's goal is to maintain our current level of gender diversity and believes that the current composition of its senior management has more than achieved the Company's diversity objective with respect to gender.

The Company employs 129 persons as of December 31, 2025, of which 57 are male and 72 are female. The Company targets an overall gender ratio among its employees of at least 30% male employees and at least 30% female employees.

The Company has taken the following activities and measures for a more balanced gender ratio within the organization:

- establishing policies that support equal opportunities for employees, senior management and applicants for employment;
- encouraging and enforcing respectful communication and cooperation among all employees and senior management;
- fostering a corporate culture where employees and senior management are treated with dignity, respect and understanding;
- requiring employee and senior management participation in training on diversity and inclusion;
- actively encouraging employees and officers who feel that they have been subjected to discrimination or harassment to report this to their supervisor or to the Company's human resources department; and
- regularly review our corporate policies to ensure equal treatment.

Given the gender ratios both in the Board as well as senior management, we are satisfied overall with our efforts towards improving gender diversity and we believe that our activities, training, mentoring and programs will continue to enhance the Company's diversity objectives.

5.9 Corporate values and code of business conduct and ethics

We recently revised our code of business conduct and ethics which covers a broad range of matters including the handling of conflicts of interest, compliance topics (including reporting concerns), and other corporate policies such as insider trading and equal opportunity and non-discrimination standards. We believe our code of business conduct and ethics is effective.

We have defined and communicated internally and externally our Corporate Values which underpin our overall Company Culture and reflect the organization's brand. The values act as a set of guiding principles and beliefs and help the workforce function together as a team and work towards a common goal.

6. Compensation

6.1 Compensation policy

Pursuant to Section 2:135(1) DCC, the General Meeting has adopted a Compensation Policy. The Compensation Policy is designed to contribute to the Company's strategy, long-term interests and sustainability by:

- i. attracting, retaining and motivating highly skilled individuals with the qualities, capabilities, profile and experience needed to support and promote the growth and sustainable success of the Company and its business;
- ii. driving strong business performance, promoting accountability and incentivising the achievement of short and long-term performance targets with the objective of furthering long-term value creation in a manner consistent with the Company's identity, mission and values;
- iii. assuring that the interests of the Directors are closely aligned to those of the Company, its business and its stakeholders; and
- iv. ensuring overall market competitiveness of the Compensation Packages, while providing the Board sufficient flexibility to tailor the Company's compensation practices on a case-by-case basis, depending on the market conditions from time to time.

We believe that this approach and philosophy benefits the realisation of the Company's long-term objectives while keeping with the Company's risk profile.

6.2 Compensation of directors

See Note 20 (Related parties) to the consolidated financial statements for an overview of the implementation of the Compensation Policy in the fiscal year to which this report relates. In determining the level and structure of the compensation of the directors in the fiscal year to which this report relates relevant scenario analyses carried out in advance have been considered as follows: In the second half of 2024, - and after CC approval in August 2024, the independent and objective external compensation consultant reviewed the global peer group, and used the updated peer group companies to assess current NED compensation (cash fee & equity) and to propose status quo on cash compensation and adjustment to equity award for 2025. This proposal was presented by the Chair of the compensation Committee and received Board approval early 2025.

6.3 Pay ratio

The DCGC recommends that the Company provide a ratio comparing the total annual compensation of our executive director and that of a "representative reference group" determined by the Company. We have chosen to compare the cash compensation of our Chief Executive Officer to that of a median full-time permanent employee. Our methodology for producing this ratio excludes employees employed on a non-permanent basis. We have used the aggregate target cash compensation over the fiscal year concerned as a reference amount (i.e., excluding the value of equity incentive awards and other non-cash compensation components). To calculate the ratio, we have annualized the salaries of employees who had worked with us for less than a year as of December 31, 2025, and have calculated the salaries of employees on a part-time basis to reflect a full-time employment. Based on this methodology, the ratio between the total target cash compensation (Annual Base Salary and bonus target) of our Chief Executive Officer and a median full-time permanent employee for the fiscal year to which this report relates is 1 to 3.36 (rounded to the nearest integer). This CEO pay ratio has decreased slightly in 2025 compared to the CEO pay ratio reported in our previous report for 2024 at 1 to 3.57 (2023 at 1 to 3.20, 2022: 1 to 3.18, 2021: 1 to 2.77).

7. Related party transactions

For information on related party transactions, see Note 20 (Related parties) to the Consolidated Financial Statements.

Where applicable, best practice provisions 2.7.3, 2.7.4 and 2.7.5 of the DCGC have been observed with respect to the transactions referenced above in this chapter 7.

8. Protective Measures

We have adopted several provisions that may have the effect of making a takeover of our Company more difficult or less attractive, including:

- a provision that our directors may only be removed at the general meeting by a two-thirds majority of votes cast representing more than half of our issued share capital if such removal is not proposed by our Board;
- our directors being appointed on the basis of a binding nomination by our Board, which can only be overruled by the general meeting by a resolution adopted by at least a two-thirds majority of the votes cast, provided such majority represents more than half of the issued share capital (in which case the Board shall make a new nomination);
- a provision which allows the former chairman of our Board or our former chief executive officer to be charged with our management if all of our directors are absent or incapacitated; and
- requirements that certain matters, including an amendment of our articles of association, may only be brought to our shareholders for a vote upon a proposal by our Board.

In addition, Dutch law allows for staggered multi-year terms of our directors, as a result of which only part of our directors may be subject to appointment or re-appointment in any one year.

Furthermore, in accordance with the DCGC, shareholders who have the right to put an item on the agenda for our General Meeting or to request the convening of a General Meeting shall not exercise such rights until after they have consulted our Board. If exercising such rights may result in a change in our strategy (for example, through the dismissal of directors), our Board must be given the opportunity to invoke a reasonable period of up to 180 days to respond to the shareholders' intentions. If invoked, our Board must use such response period for further deliberation and constructive consultation, in any event with the shareholder(s) concerned and exploring alternatives. At the end of the response time, our Board shall report on this consultation and the exploration of alternatives to our General Meeting. The response period may be invoked only once for any given General Meeting and shall not apply (i) in respect of a matter for which a response period has been previously invoked or (ii) if a shareholder holds at least 75% of our issued share capital as a consequence of a successful public bid.

In addition, our Board can invoke a cooling-off period of up to 250 days when shareholders, using their right to have items added to the agenda for a General Meeting or their right to request a general meeting, propose an agenda item for our General Meeting to dismiss, suspend or appoint one or more directors (or to amend any provision in the Articles of Association dealing with those matters) or when a public offer for our company is made or announced without our support, provided, in each case, that our board of directors believes that such proposal or offer materially conflicts with the interests of our company and its business. During a cooling-off period, our General Meeting cannot dismiss, suspend or appoint directors (or amend the provisions in the Articles of Association dealing with those matters) except at the proposal of our Board.

During a cooling-off period, our Board must gather all relevant information necessary for a careful decision-making process and at least consult with shareholders representing 3% or more of our issued share capital at the time the cooling-off period was invoked, as well as with our Dutch works council (if we or, under certain circumstances, any of our subsidiaries would have one). Formal statements expressed by these stakeholders during such consultations must be published on our website to the extent these stakeholders have approved that publication. Ultimately one week following the last day of the cooling-off period, our Board must publish a report in respect of its policy and conduct of affairs during the cooling-off period on our website. This report must remain available for inspection by

shareholders and others with meeting rights under Dutch law at our office and must be tabled for discussion at the next General Meeting. Shareholders representing at least 3% of our issued share capital may request the Enterprise Chamber of the Amsterdam Court of Appeal (the "Enterprise Chamber") for early termination of the cooling-off period.

The Enterprise Chamber must rule in favor of the request if the shareholders can demonstrate that:

- our Board, in light of the circumstances at hand when the cooling-off period was invoked, could not reasonably have concluded that the relevant proposal or hostile offer constituted a material conflict with the interests of our company and its business;
- our Board cannot reasonably believe that a continuation of the cooling-off period would contribute to careful policy-making; or
- other defensive measures, having the same purpose, nature and scope as the cooling-off period, have been activated during the cooling-off period and have not since been terminated or suspended within a reasonable period at the relevant shareholders' request (i.e., no 'stacking' of defensive measures).

Notes to the Consolidated Financial Statements

1. Corporate and Group information

This section provides general corporate and group information about Pharvaris N.V. and its subsidiaries.

1.1 Corporate information

The consolidated financial statements of Pharvaris N.V. (the "Company" or "Pharvaris") and its subsidiaries (collectively, "The Group") for the year ended December 31, 2025 were authorized for issue in accordance with a resolution of the directors on April 2, 2026.

Pharvaris N.V. was incorporated on September 30, 2015 and is based in Leiden, the Netherlands. The Company's registered office is located at Emmy Noetherweg 2, Leiden. The Company has been registered at the Chamber of Commerce under file number 64239411.

Pharvaris is a late-stage biopharmaceutical company focused on the development and commercialization of innovative therapies for rare diseases with significant unmet need, initially focused on angioedema and other bradykinin-mediated diseases.

1.2 Group information

Subsidiaries

The consolidated financial statements of the Group include:

Name	Legal seat	Country of incorporation	% of equity interest	
			2025	2024
Pharvaris Holdings B.V.	Leiden	The Netherlands	100 %	100 %
Pharvaris Netherlands B.V.	Leiden	The Netherlands	100 %	100 %
Pharvaris, Inc.	Delaware	United States of America	100 %	100 %
Pharvaris GmbH	Zug	Switzerland	100 %	100 %
Pharvaris Pharmaceuticals, Inc.*	Delaware	United States of America	100 %	N/A

*Pharvaris Pharmaceuticals, Inc was incorporated in June 2025

Pharvaris, Inc. and Pharvaris GmbH were incorporated on January 31, 2020 and March 27, 2020 respectively. Pharvaris, Inc. acts as a service provider to the principal Company of the Group. Pharvaris GmbH is the principal Company of the Group starting April 1, 2020. The principal Company owns the Group's intellectual property and makes the major operating decisions.

The ultimate parent company

The ultimate parent company of the Group is Pharvaris N.V., which is based in the Netherlands.

2. Summary of material accounting policies

2.1 Summary of material accounting policies

2.1 Basis of preparation

The consolidated financial statements of the Group have been prepared in accordance with IFRS Accounting Standards (IFRS) as issued by the International Accounting Standards Board (IASB).

The consolidated financial statements have been prepared on a historical cost basis. Unless otherwise stated, the consolidated financial statements are presented in euro and all values are rounded to the nearest EUR (€), except per share amounts.

Certain personnel, consulting, and facility related costs previously reported under General and Administrative expenses were determined to be more appropriately classified as Research and Development expenses. The Company reclassified approximately €4.6 million from General and Administrative expenses to Research and Development expenses for the year ended December 31, 2025. This reclassification had no impact on the total operating expenses, net loss, or loss per share.

2.2 Going concern

Management assessed the Company's ability to fund its operations for a period of at least 12 months after the date of signing these financial statements. Management has not identified significant going concern risks. The financial statements of the Company have been prepared on the basis of the going concern assumption based on its existing funding, taking into account the Company's current cash position and the projected cash flows based on the activities under execution on the basis of Pharvaris' business plan and budget.

2.3 Basis of consolidation

Subsidiaries are entities controlled by the Company. The Company controls an entity when it is exposed to, or has rights to, variable returns from its involvement with the entity and has the ability to affect those returns through its power over the entity. The financial statements of subsidiaries are included in the consolidated financial statements from the date on which control commences until the date on which control ceases. Intra-group balances and transactions are eliminated in the consolidation. Since the profit and loss statement for 2025 of Pharvaris N.V. is included in the consolidated financial statements, an abridged profit and loss statement has been disclosed in the company financial statements in accordance with Section 402, Book 2, of the Dutch Civil Code.

2.4 Segment reporting

Operating segments are identified based on whether the allocation of resources and/ or the assessment of performance of a particular component of Group's activities are regularly reviewed as a separate operating segment by the Executive Committee which serves as the Chief Operating Decision Maker ("CODM"). By these criteria, the activities of Pharvaris are considered to be one segment which comprises the discovery, development and commercialization of oral bradykinin B2 receptor antagonists and the segmental analysis is the same as the analysis for Pharvaris as a whole. The CODM reviews the consolidated operating results regularly to make decisions about the resources and to assess overall performance.

2.5 Foreign currencies

Items included in the financial statements of each of the group's entities are measured using the currency of the primary economic environment in which the entity operates. The Group's consolidated financial statements are presented in Euro, which is also the functional currency of Pharvaris N.V.

Transactions and balances

Transactions in foreign currencies are initially recorded by the Group's entities at their respective functional currency spot rates at the date the transaction first qualifies for recognition.

Monetary assets and liabilities denominated in foreign currencies are translated at the functional currency spot rates of exchange at the reporting date.

Differences arising on settlement or translation of monetary items are recognized in profit or loss.

Non-monetary items that are measured in terms of historical cost in a foreign currency are translated using the exchange rates at the dates of the initial transactions.

Upon consolidation, the assets and liabilities of foreign operations are translated into Euro at the rate of exchange prevailing at the reporting date and their statements of operations are translated at the average exchange rate of the fiscal period. The exchange differences arising on translation for consolidation are recognized directly in other comprehensive income.

2.6 Notes to the cash flow statement

The cash flow statement has been prepared using the indirect method. The cash and cash equivalents disclosed in the cash flow statement comprises of cash at bank and money market funds.

2.7 Property, Plant and Equipment

Property, plant and equipment comprises office equipment. Property, plant and equipment are stated at historical cost less accumulated depreciation. Historical cost includes expenditure that is directly attributable to the acquisition of the items. Subsequent costs are included in the asset's carrying amount or recognized as a separate asset only when it is probable that future economic benefits associated with the item will flow to the Group and the cost of the item can be measured reliably.

Depreciation on property, plant and equipment is calculated using the straight-line method to allocate their cost over their estimated useful lives, as follows:

- Office equipment 3-5 years

The assets' residual values and useful lives are reviewed, and adjusted if appropriate, at each balance sheet date. An asset's carrying amount is written down immediately to its recoverable amount if the asset's carrying amount is larger than its estimated recoverable amount.

Gains and losses on disposals are determined by comparing proceeds with the carrying amount and are recognized in the consolidated statements of loss and comprehensive loss.

2.8 Financial instruments Recognition and measurement

Financial assets

Initial recognition and measurement

Financial assets are initially measured at fair value plus or minus, for an item not at fair value through profit or loss ("FVTPL") transaction costs that are directly attributable to its acquisition or issue. After the initial measurement, the gains and losses are either recognized in profit and loss, or recognized in other comprehensive income.

The classification of financial assets at initial recognition depends on the financial asset's contractual cash flow characteristics and the Group's business model for managing them. Financial assets are included in Group's consolidated statements of financial position when Pharvaris becomes a party to the contractual provisions of the instrument.

Transaction costs of equity transactions are either accounted for as a deduction from equity, but only to the extent they are incremental costs directly attributable to the equity transaction that otherwise would have been avoided, or are deferred on the balance sheet until the equity instrument is recognized. The costs of an equity transaction that is abandoned are recognized as an expense.

Subsequent measurement

Financial assets are subsequently measured at amortized cost. Financial assets at amortized cost are subsequently measured using the effective interest method and are subject to impairment. Gains and losses are recognized in the consolidated statements of loss and comprehensive loss when the asset is derecognized, modified or impaired.

For the year ended December 31, 2025, the Group had the following financial assets to be measured at amortized cost:

- Cash and cash equivalents

- Receivables

Derecognition

Financial assets are derecognized when the rights to receive cash flows from the investments have expired or have been transferred and where the Group has transferred substantially all risks and rewards of ownership.

Financial liabilities

Initial recognition and measurement

All financial liabilities are recognized initially at fair value and, in the case of loans and borrowings and payables, net of directly attributable transaction costs. The Group's financial liabilities include trade payables and accrued liabilities.

Subsequent measurement

After initial recognition, trade payables and accrued liabilities are subsequently measured at amortized cost. Gains and losses are recognized in the consolidated statements of loss and comprehensive loss.

Derecognition

A financial liability is derecognized when the obligation under the liability is discharged or cancelled or is expired.

2.9 Receivables

Receivables are recognized initially at fair value and subsequently measured at amortized cost. If payment of the receivable is postponed under an extended payment deadline, fair value is measured on the basis of the discounted value of the expected payments. When a receivable is uncollectible, it is written off against the allowance account for receivables.

2.10 Cash and cash equivalents

Cash and cash equivalents comprise bank balances and money market funds.

2.11 Equity

The Group classifies an instrument, or its component parts, on initial recognition as a financial liability or an equity instrument in accordance with the substance of the contractual arrangement and the definitions of a financial liability and an equity instrument.

An instrument is classified as a financial liability when it is either (i) a contractual obligation to deliver cash or another financial asset to another entity or to exchange financial assets or financial liabilities with another entity under conditions that are potentially unfavorable to the Group; or (ii) a contract that will or may be settled in the Group's own equity instruments and is a non-derivative for which the Group is or may be obliged to deliver a variable number of the Group's own equity instruments or a derivative that will or may be settled other than by the exchange of a fixed amount of cash or another financial asset for a fixed number of the Group's own equity instruments. An equity instrument is defined as any contract that evidences a residual interest in the assets of an entity after deducting all of its liabilities. An instrument is an equity instrument only if the issuer has an unconditional right to avoid settlement in cash or another financial asset.

Ordinary shares

Ordinary shares are classified as equity.

Warrants

Pre-funded warrants are classified as equity and are largely paid upfront. The pre-funded warrants can be converted into ordinary shares upon exercise of the warrant, which requires payment of a nominal exercise price to the Company at the time of exercise.

2.12 Trade and other payables

Trade and other payables are obligations to pay for goods or services that have been acquired in the ordinary course of business from suppliers.

Accounts payable are classified as current liabilities if payment is due within one year or less (or in the normal operating cycle of the business if longer).

If not, they are presented as non-current liabilities.

2.13 IFRS 16 Leases

All leases are accounted for by recognizing a right-of-use asset and a lease liability except for:

- leases of low value assets; and

101 [Table of Contents](#)

- leases with a duration of 12 months or less.

Lease liabilities are measured at the present value of the contractual payments due to the lessor over the lease term, using the Group's incremental borrowing rate at commencement of the lease.

On initial recognition, the carrying value of the lease liability also includes:

- any penalties payable for terminating the lease, if the term of the lease has been estimated on the basis of termination option being exercised.

Right of use assets are initially measured at the amount of the lease liability, reduced for any lease incentives received, and increased for:

- lease payments made at or before commencement of the lease;
- initial direct costs incurred; and
- the amount of any provision recognized where the Group is contractually required to dismantle, remove or restore the leased asset.

Subsequent to initial measurement lease liabilities increase as a result of interest charged at a constant rate on the balance outstanding and are reduced for lease payments made. Right-of-use assets are amortized on a straight-line basis over the remaining term of the lease.

When the Group revises its estimate of the term of any lease, it adjusts the carrying amount of the lease liability to reflect the payments to be made over the revised term, which are discounted using an updated discount rate.

2.14 Current and deferred income tax

The tax expense for the period comprises current and deferred tax. Tax effects are recognized in the consolidated statements of loss and comprehensive loss.

The current income tax charge is calculated on the basis of the tax laws enacted or substantively enacted at the balance sheet date in the countries where the Company's subsidiaries operate and generate taxable income. Management periodically evaluates positions taken in tax returns with respect to situations in which applicable tax regulation is subject to interpretation. It establishes provisions where appropriate on the basis of amounts expected to be paid to the tax authorities.

Deferred income tax is recognized, using the liability method, on temporary differences arising between the tax basis of assets and liabilities and their carrying amounts in the consolidated financial statements. Deferred income tax is determined using tax rates (and laws) that have been enacted or substantially enacted by the balance sheet date and are expected to apply when the related deferred income tax asset is realized or the deferred income tax liability is settled.

Deferred income tax assets are recognized only to the extent that it is probable that future taxable profit will be available or tax planning opportunities are available to the Company that will create taxable profit in appropriate periods against which the temporary differences and/or tax losses carried forward can be utilized. IAS 12 states that it is 'probable' that there will be sufficient taxable profit if a deductible temporary difference can be offset against a taxable temporary difference (deferred tax liability) relating to the same tax authority and the same taxable entity which will reverse in the same period as the asset, or in a period into which a loss arising from the asset may be carried back or forward.

In allocating the recognition and derecognition of DTAs on losses carried forward within a jurisdiction between equity and profit or loss (considering backward tracing), it is the Company's accounting policy to use a so-called vertical approach instead of a horizontal one to offset results of the current year with carry forward losses of previous years. That means the carry forward losses initially accounted for in profit or loss (equity) are used to offset current year gains accounted for in profit or loss (equity) first insofar available. Any remaining gains accounted for in profit or loss (equity) are offset with losses accounted for in equity (profit or loss) of the same year, and carry forward losses initially accounted for in equity (profit or loss).

Deferred income tax assets and liabilities are offset when there is a legally enforceable right to offset current tax assets against current tax liabilities and when the deferred income tax assets and liabilities relate to income taxes levied by the same taxation authority on either the taxable entity or different taxable entities where there is an intention to settle the balances on a net basis. Deferred tax balances are not discounted.

2.15 Share-based payment

The Company operates an equity-settled share-based compensation plan, under which it receives services as consideration for equity instruments (options or restricted stock units) of the Company. The fair value of these equity instruments granted in exchange for the services received from the participants is recognized as an expense. The total amount to be expensed is determined by reference to the fair value of the options or restricted stock units granted.

Service vesting condition and non-market performance vesting conditions are included in the assumptions about the number of equity instruments that are expected to vest. The total expense is recognized over the vesting period, which is the period over which all of the specified vesting conditions are to be satisfied. The Group recognizes the impact of the revision to previous estimates, if any, in the consolidated statements of loss and comprehensive loss, with a corresponding adjustment to equity. The tax effect of issued restricted stock units is debited to accumulated losses when net settlement is used in order to satisfy the Company's tax withholding obligations.

2.16 Expenses

Research and development expenses

Research activities undertaken with the prospect of gaining new scientific knowledge and understanding are expensed as incurred. Development expenses are capitalized only if the cost involved can be measured reliably, the product or process under development is technically feasible, future economic benefits are probable and the Group has the intention and resources to complete development and use or sell it. Due to the regulatory environment and other types of uncertainty, management has determined that the criteria for capitalizing development costs to intangible assets, as set out in IAS 38, have not been met and therefore the Group has not capitalized any development expenses in 2025 or 2024. See Note 3 for information relating to research and development expenses incurred in the reporting period.

At each balance sheet date, the Group estimates the level of services performed by the vendors and the associated cost incurred for the services performed.

General and administrative expenses

Expenses are recognized in the Group's consolidated statements of loss and comprehensive loss as expenses when incurred.

Personnel expenses

Wages and salaries, social security contributions, paid leave and bonuses, and other employee benefits are recognized in the financial year in which the employees provide the associated services.

The group's pension plans are classified as defined contribution plans, and, accordingly, no pension obligations are recognized in the balance sheet. Costs relating to defined contribution plans are included in the consolidated statements of loss and comprehensive loss in the period in which they are incurred, and outstanding contributions are included in other payables.

2.17 New and amended standards and interpretations

Lease Liability in a Sale and Leaseback (Amendments to IFRS 16)

On September 22, 2022, the IASB issued amendments to IFRS 16 - Leases. The amendment clarifies how a seller-lessee subsequently measures sale and leaseback transactions that satisfy the requirements in IFRS 15 to be accounted for as a sale. The amendment is effective for reporting periods beginning on or after January 1, 2024. The amendments do not have a material impact on the Group.

2.18 Standards issued but not yet effective

The standards and interpretations that are issued, but not yet effective, up to the date of issuance of the Group's financial statements are disclosed below.

The Group intends to adopt these standards, if applicable, when they become effective.

Amendment to IFRS 9 and IFRS 7 - Classification and Measurement of Financial Instruments

These amendments clarify the requirements for the timing of recognition and derecognition of some financial assets and liabilities, with a new exception for some financial liabilities settled through an electronic cash transfer system; clarify and add further guidance for assessing whether a financial asset meets the solely payments of principal and interest (SPPI) criterion; add new disclosures for certain instruments with contractual terms that can change cash flows (such as some instruments with features linked to the achievement of environment, social and governance (ESG) targets); and make updates to the disclosures for equity instruments designated at Fair Value through Other Comprehensive Income (FVOCI).

The amendment is effective for reporting periods beginning on or after January 1, 2026. The amendments are not expected to have a material impact on the Group.

IFRS 18, Presentation and Disclosure in Financial Statements

This is the new standard on presentation and disclosure in financial statements, with a focus on updates to the statement of profit or loss. The key new concepts introduced in IFRS 18 relate to the structure of the statement of profit or loss; required disclosures in the financial statements for certain profit or loss performance measures that are reported outside an entity's financial statements (that is, management-defined performance measures); and enhanced principles on aggregation and disaggregation which apply to the primary financial statements and notes in general.

The amendment is effective for reporting periods beginning on or after January 1, 2027. The amendments are being assessed by the Group.

2.19 Significant accounting judgements, estimates and assumptions

The preparation of the Group's consolidated financial statements requires management to make judgements, estimates and assumptions that affect the reported amounts of expenses, income, assets and liabilities, and the accompanying disclosures. Uncertainty about these assumptions and estimates could result in outcomes that require a material adjustment to the carrying amount of assets or liabilities affected in future periods.

In the process of applying the Group's accounting policies, management has made various judgements. Those which management has assessed to have the most significant effect on the amounts recognized in the financial statements have been discussed below.

The key assumptions concerning the future and other key sources of estimation uncertainty at the reporting date, that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the next financial year, are also described in the individual notes. The Group based its assumptions and estimates on parameters available when the consolidated financial statements were prepared. Existing circumstances and assumptions about future developments, however, may change due to market changes or circumstances arising that are beyond the control of the Group. Such changes are reflected in the assumptions when they occur.

Share-based payments

The Group has adopted an equity-settled share-based compensation plan, pursuant to which certain participants are granted the right to acquire ordinary shares of the Company. The grants made under this plan are accounted for in accordance with the policy as stated in Note 2.15. The total amount to be expensed is determined by reference to the fair value of the options or restricted stock units granted. The fair value of the options is measured at the date of grant using the Black-Scholes formula as further explained in Note 18.

The use of the Black-Scholes formula requires use of certain assumptions relating to the expected option life, the volatility of stock price, the determination of an appropriate risk-free interest rate and expected dividends.

Research and development expenses

Research and development expenses are currently not capitalized but are expensed because the criteria for capitalization are not met (Note 2.16 and Note 3). At each balance sheet date, the Group estimates the level of services performed by the vendors and the associated costs incurred for the services performed. Although we do not expect the estimates to be materially different from amounts actually incurred, the understanding of the status and timing of services performed relative to the actual status and timing of services performed may vary and could result in reporting amounts that are too high or too low in any particular period.

3. Research and development expenses

	2025	2024	2023
	€	€	€
Clinical expenses	(67,744,537)	(55,867,694)	(30,690,293)
Personnel expenses (Note 5)	(35,755,155)	(27,767,184)	(19,132,307)
Manufacturing costs	(12,024,982)	(9,434,537)	(6,500,986)
Nonclinical expenses	(7,485,648)	(3,324,513)	(8,977,187)
License costs	(1,065,471)	(1,592,687)	—
Intellectual Property costs	(402,541)	(576,914)	(274,257)
	<u>(124,478,334)</u>	<u>(98,563,529)</u>	<u>(65,575,030)</u>

Development expenses are currently not capitalized but are recorded in the consolidated statements of profit or loss and other comprehensive loss because the recognition criteria for capitalization are not met.

Clinical expenses include costs of conducting and managing our sponsored clinical trials, including clinical investigator cost, costs of clinical sites, and costs for CRO's assisting with our clinical development programs.

Manufacturing expenses include costs related to manufacturing of active pharmaceutical ingredients and manufacturing of the products used in our clinical trials and research and development activities.

Nonclinical expenses include costs of our outsourced discovery, preclinical and nonclinical development studies.

License costs comprise milestone payments associated with the development, approval and commercialization of deucricitibant, including the payment of a milestone during the fourth quarter of 2025 for the successful finalization of the Phase III study.

4. General and administrative expenses

	2025	2024	2023
	€	€	€
Personnel expenses (Note 5)	(23,139,822)	(18,883,708)	(13,314,359)
Professional fees	(8,616,327)	(7,757,750)	(4,689,462)
Facilities, communication and office expenses	(5,957,027)	(6,509,691)	(6,031,513)
Accounting, tax and auditing fees	(2,626,525)	(4,017,669)	(2,029,554)
Travel expenses	(1,212,356)	(2,129,631)	(1,797,588)
Consulting fees	(103,848)	(858,843)	(602,110)
Other expenses	(3,688,693)	(6,967,346)	(2,874,004)
	<u>(45,344,598)</u>	<u>(47,124,638)</u>	<u>(31,338,590)</u>

In 2022 and 2021 the Group entered into a number of short-term rental arrangements, the expenses are included in "Other expenses".

For the year ended December 31, 2025, depreciation expense of €0.4 million (2024: €0.1 million; 2023: €0.06 million), which relate to property, plant and equipment and leases, is included in the 'Other expenses' line.

5. Personnel expenses

	2025	2024	2023
	€	€	€
Wages and salaries	(33,570,013)	(25,805,171)	(18,746,645)
Pension charges	(2,063,817)	(1,572,233)	(1,156,028)
Other social security charges	(3,579,948)	(3,064,955)	(1,880,767)
Share-based payments	(19,050,394)	(16,208,533)	(10,663,226)
Other employee related costs	(630,805)	—	—
	<u>(58,894,977)</u>	<u>(46,650,892)</u>	<u>(32,446,666)</u>

The number of staff (in FTE's) employed by the Group at December 31, 2025 was 129 (2024: 108; 2023: 82).

6. Finance income / (expense)

	2025	2024	2023
	€	€	€
Foreign exchange differences	(10,250,749)	7,869,114	(3,116,662)
Interest and other income over bank balances	6,535,046	5,469,464	224,494
Other finance expenses	(172,861)	(46,914)	(20,475)
	<u>(3,888,564)</u>	<u>13,291,664</u>	<u>(2,912,643)</u>

The Group reports financial results in Euros. Since bank balances are in Euros, U.S. Dollars and Swiss Francs, changes in the conversion rates of the Dollars and Swiss Francs versus the Euro result in either income or expense over time. Interest income relates to earnings on cash deposits.

7. Income taxes

	2025	2024	2023
	€	€	€
Current income tax expense	(1,087,278)	(1,033,115)	(473,623)
Deferred tax (charge)	(900,623)	(791,909)	(575,182)
Income tax (expense)	<u>(1,987,901)</u>	<u>(1,825,024)</u>	<u>(1,048,805)</u>

The current tax expenses for the years ended December 31, 2025, 2024 and 2023 relates to the Company's U.S. and Dutch subsidiaries as the result of a cost-plus agreement between the U.S. and Dutch entities and the Group's principal entity in Switzerland. For the year ended December 31, 2025, a tax benefit of €1.4 million is additionally directly recognized in equity (2024: €0.9 million; 2023: €0.7 million).

105 Table of Contents

Reconciliation of income tax benefit / (expense) at statutory tax rate and the income tax benefit / (expense) as reported in the consolidated statement of profit or loss and other comprehensive income is as follows:

	2025	2024	2023
	€	€	€
Loss before income tax	(173,711,496)	(132,396,503)	(99,826,263)
Income tax at statutory income tax rate in the Netherlands (2025, 2024 and 2023: 25.8%)	44,817,566	34,158,298	25,755,176
Effect of tax rates in other countries	(24,993,816)	(17,611,881)	(14,334,369)
Recognition (derecognition) of previously unrecognized (recognized) deferred tax assets	270,882	762,594	(58,506)
Current period losses for which no deferred tax asset has been recognized	(22,244,353)	(17,950,456)	(14,771,877)
Nondeductible expenses	(891,058)	(1,085,015)	(458,482)
Prior period adjustments	1,052,878	(98,564)	2,819,253
Income tax (expense)	<u>(1,987,901)</u>	<u>(1,825,024)</u>	<u>(1,048,805)</u>

The effective tax rate for 2025 is (1.1%) (2024: (1.4%); 2023: (1.1%).

Pharvaris N.V. is the head of the fiscal unity including Pharvaris Netherlands B.V. and Pharvaris Holdings B.V.

The differences in the overseas tax rates are due to the higher tax rate in the USA and the lower tax rate in Switzerland compared to the statutory income tax rate in the Netherlands.

The Current period losses for which no deferred tax asset has been recognized consists of the unrecognized tax effect of losses incurred in Switzerland.

Following discussions with the Dutch tax authorities in November 2022, the Company concluded that foreign exchange results should be allocated to the principal Company in Switzerland. As a result, the current losses for Switzerland are partly offset by the allocated foreign exchange results. The Company did not recognize the tax benefit of the losses incurred in previous years for Switzerland.

The Group has tax loss carry-forwards as of December 31, 2025 of approximately €643.0 million (2024: €449.8 million; 2023: €325.0 million;), that are available for offsetting against future taxable profits of the Companies in which the losses arose. A new Dutch tax law came into effect on January 1, 2022. Under the new tax law, profits in a given year can be offset against tax loss carry forwards for an unlimited period of time. The amount of the offset will be limited to 50% of taxable income (in excess of €1.0 million). Under Swiss law, losses can be offset against future income or capital gains for seven years.

Tax loss carry-forwards incurred in current and prior years will expire as follows:

	Switzerland	Netherlands	Tax losses
Year	€	€	€
2027	103,161,581	—	103,161,581
2028	74,599,050	—	74,599,050
2029	108,339,820	—	108,339,820
2030	323,032,344	—	323,032,344
Unlimited	—	33,892,029	33,892,029
Total carry-forward losses	<u>609,132,795</u>	<u>33,892,029</u>	<u>643,024,824</u>

Deferred taxes

Deferred taxes have been recognized to the extent that management concludes that there is sufficient probability as per IAS 12 that there will be future taxable profits available in the foreseeable future against which the unused tax losses and deductible temporary differences can be utilized. The net deferred tax asset balance at December 31, 2025, includes €0.9 million of deductible temporary differences that have been recognized as deferred tax asset and relates to personnel bonus accruals that are expected to reverse within 12 months after the balance sheet date.

Deferred tax assets relating to losses carried forward have not been recognized, and deferred tax assets on deductible temporary differences in excess of deferred tax liabilities on taxable temporary differences have not been recognized in the consolidated statement of profit and loss and other comprehensive income for the Dutch fiscal unity.

As a result thereof Deferred taxes have been recognized to the extent that management concludes that there is sufficient probability as per IAS 12 that there will be future taxable profits available in the foreseeable future against which the unused tax losses can be utilized.

Movements in deferred tax balances

The total unrecognized deferred tax assets from temporary differences amounts to €9.2 million as at December 31, 2025 (2024: €10.4 million, 2023: €11.0 million).

8. Property, plant and equipment

	Notes	2025	2024
		€	€
Net book value			
As of January 1,		667,000	223,678
Additions		164,620	538,085
Depreciation expenses	4	(189,150)	(94,763)
As of December 31,		642,470	667,000
		2025	2024
		€	€
Cumulative depreciation			
As of January 1,		(220,136)	(125,373)
Depreciation		(189,150)	(94,763)
As of December 31,		(409,286)	(220,136)
		2025	2024
		€	€
Cumulative Costs			
As of January 1,		887,136	349,051
Additions		164,620	538,085
As of December 31,		1,051,756	887,136

During 2025, the Group acquired assets with a cost of €0.2 million (2024: €0.5 million; 2023: €0.09 million). The investments in property, plant and equipment, relate to equipment, tools and installations.

9. Leases

The following table provides information about the Group's right of use assets:

	2025	2024
	€	€
As of January 1,	813,842	231,893
Additions / (Disposals)	—	756,748
Remeasurement	251,427	—
Depreciation charges	(229,203)	(174,799)
Impact of transaction of foreign currency	(79,115)	—
As of December 31,	756,951	813,842

The following table provides information about the maturities of the Company's lease liabilities at December 31, 2025:

	2025	2024
	€	€
Office leases	(776,798)	(861,470)
Total lease liability	(776,798)	(861,470)
Current Portion	(200,213)	(222,427)
Non-current Portion	(576,585)	(639,043)

The following table provides information about the maturities of the Company's lease liabilities at December 31, 2025:

As at December 31,	€
Less than 1 year	310,692
1-5 Years	894,952
Total lease payments	1,205,644
Less: imputed interest	428,846
Total lease liabilities	776,798
Current lease liabilities	200,213
Long-term lease liabilities	576,585

Office leases consist of (i) a lease that was renewed on December 1, 2025 with an expiration date of November 30, 2028 for offices in Leiden, the Netherlands. The lease has a lease term of three years, and (ii) a new lease agreement entered into on October 16, 2024 with an expiration date of December 31, 2029, for office space in Lexington, Cranberry One Suite 400, United States of America, or the U.S. The lease has a lease term of five years.

On June 30, 2024 a lease related to office space in Lexington, Cranberry One Suite 300, expired.

The average incremental borrowing rate applied to the lease liability related to the Leiden lease was 7.77% during the twelve months ended December 31, 2025 and 2024.

The average incremental borrowing rate applied to the lease liability related to the U.S. lease was 6.39% for the year ended December 31, 2025.

Depreciation expense of €0.2 million for each of the years ended December 31, 2025, 2024 and 2023, was incurred and is reflected in general and administrative expenses as determined by the underlying activities.

The total expense related to short-term and low-value leases in 2025 was €0.3 million, (2024: €0.4 million; 2023: €0.2 million) and is included in facility, communication, and office expenses.

Cash outflows related to leases during the years ended December 31, 2025, 2024 and 2023 were €0.2 million in each of the years.

10. Receivables

	2025	2024
	€	€
Current tax receivable	3,994,384	2,486,680
VAT receivables	556,739	457,834
	<u>4,551,123</u>	<u>2,944,514</u>

11. Other current assets

	2025	2024
	€	€
Prepayments	2,938,215	5,747,025
	<u>2,938,215</u>	<u>5,747,025</u>

Prepayments mainly relate to prepaid insurance, prepaid research and development expenses and rent.

12. Cash and cash equivalents

	2025	2024
	€	€
Cash and cash equivalents	291,678,888	280,728,037
	<u>291,678,888</u>	<u>280,728,037</u>

The Cash and cash equivalents consist of bank balances and money market funds and are not subject to any restriction. Of the cash on hand, €0.1 million relates to guarantees. Cash and cash equivalent balances as of December 31, 2025 include investments in money market funds of €232.5 million at fair market value. (Cost: €241.2 million) (December 31, 2024: Euro nil).

13. Equity

On December 31, 2025 and 2024, the Company's authorized share capital amounted to € 14.1 million divided into 117,500,000 ordinary shares, each with a nominal value of (€0.12). (2023: authorized share capital amounted to € 14.1 million divided into 58,750,000 ordinary shares and 58,750,000 preferred shares, each with a nominal value of (€0.12).

As of December 31, 2025, the total number of issued and fully paid shares was 65,210,590 (2024: 54,379,491; 2023: 52,290,212).

As of December 31, 2025, the issued share capital totaled €7.8 million (2024: €6.5 million; 2023: €6.3 million).

In March 2022, the Company filed a Form F-3 Registration Statement and prospectus, allowing the Company to sell up to \$350 million of its securities, with the Securities and Exchange Commission. This Registration Statement was supplemented by a prospectus supplement covering an at-the-market program providing for the sales from time to time of up to \$75 million of its ordinary shares pursuant to a Sales Agreement with SVB Securities LLC.

During June, 2023, the Company entered into a subscription agreement with certain institutional investors relating to the offer and sale of 6,951,340 ordinary shares of the Company, par value €0.12 per share, in a private placement at a purchase price of \$10.07 per Ordinary Share. The subscription agreement generated \$70.0 million (€64.1 million).

As of December 31, 2025, the Company has sold a total of 593,927 ordinary shares under the sales agreement generating total net proceeds of €9.3 million (\$9.8 million), after deducting €0.3 million (\$0.3 million), which was payable to Leerink Partners as commission in respect of such sales.

On April 12, 2024, the Company terminated the March 2022 sales agreement and entered into a new sales agreement with Leerink Partners (the "April 2024 Sales Agreement"), pursuant to which it may sell ordinary shares having an aggregate offering price of up to \$175 million from time to time through Leerink Partners. In April 2024, the Company filed a Form F-3 ASR Registration Statement (the "F-3 ASR") and prospectus, allowing the Company to sell an unspecified amount of its securities with the Securities and Exchange Commission. The F-3 ASR was supplemented by a prospectus supplement covering an at-the-market program providing for the sales from time to time of up to \$175 million of its ordinary shares pursuant to the April 2024 Sales Agreement.

109 [Table of Contents](#)

In December, 2023, the Company entered into an underwriting agreement with Morgan Stanley & Co. LLC and Leerink Partners, LLC as underwriters, pursuant to which the Company agreed to issue and sell (i) 11,125,000 ordinary shares, par value €0.12 per share and (ii) pre-funded warrants to purchase up to 1,375,000 ordinary shares in an underwritten offering. The Offering closed on December 8, 2023, and the Company generated net proceeds of \$282.0 million (€261.6 million), after deducting bank fees of \$18.0 million (€16.7 million).

The Shares were sold in the Offering at the public offering price of \$24.00 per share. The Pre-Funded Warrants were sold at a public offering price of \$23.99 per Pre-Funded Warrant, which represents the per share public offering price for the common stock less the \$0.01 per share exercise price for each such Pre-Funded Warrant. Each Pre-Funded Warrant is exercisable as of December 8, 2023 until fully exercised, subject to an ownership limitation relating to the Hart-Scott-Rodino Antitrust Improvements Act of 1976, as amended, as set forth in the form of Pre-Funded Warrant.

The Pre-funded warrants were subsequently exercised in January 2024 for gross exercise proceeds of \$0.01 million and resulted in issuance of 1,375,000 ordinary shares.

In March 2024, the Company received a partial reimbursement for certain of its expenses in connection with the December 2023 offering which have been accounted for in the share premium.

In July 2025, the Company entered into an underwriting agreement with Morgan Stanley & Co. LLC and Leerink Partners, LLC as representatives of the underwriters, pursuant to which the Company agreed to issue and sell (i) 9,562,500 ordinary shares, par value €0.12 per share and (ii) pre-funded warrants to purchase up to 500,000 ordinary shares in an underwritten offering. The offering closed on July 24, 2025, and the Company generated net proceeds of €160.3 million (\$188.5 million), after deducting fees and expenses of €10.9 million (\$12.8 million).

The pre-funded warrants were exercised in September 2025 for gross exercise proceeds of €0.004 million (\$0.005 million) and resulted in issuance of 500,000 ordinary shares.

Ordinary shares hold the right to one vote per share.

Issued shares

On February 5, 2021, the Company became public by listing its ordinary shares on the Nasdaq Stock Exchange. On the same date all Preferred shares A, Preferred shares B and Preferred shares C were automatically converted to ordinary shares and 9,511,075 ordinary shares were issued. Together with the issuance of the ordinary shares, the par value of each ordinary share was increased from €0.01 to €0.12.

	2025	2024
	Number of shares	Number of shares
Ordinary shares	65,210,590	54,379,491
	65,210,590	54,379,491

No dividend was distributed in 2025, 2024 or 2023.

The following describes the nature and purpose of each reserve within equity:

Share premium

The amount subscribed for share capital in excess of nominal value.

Other reserves

Other reserves consist of share-based payments reserve, which is used to recognize the grant date fair value of options and RSUs issued to employees and consultants over the vesting period.

14. Trade and other payables

	2025	2024
	€	€
Trade payables	5,114,186	4,562,900
	5,114,186	4,562,900

15. Financial assets and liabilities fair value

Fair values of cash, receivables, and current liabilities approximate their carrying amounts due to the short-term maturities of these instruments.

16. Accrued liabilities

	2025	2024
	€	€
Consulting, professional and audit liability	1,226,432	729,162
Clinical accrued liabilities	5,806,522	5,221,572
Manufacturing accrued liabilities	2,879,222	1,767,291
Nonclinical accrued liabilities	527,935	445,238
Personnel related accruals	11,432,445	7,827,392
Other accrued liabilities	1,475,916	1,597,752
	<u>23,348,472</u>	<u>17,588,407</u>

17. Financial risk management

The Group's principal financial instruments consist of cash and cash equivalents and trade and other trade payables. The financial instruments represent the Group's working capital to serve the Group's day-to-day operations.

The Group is exposed to market risk (including currency risk, interest rate risk and price risk), credit risk and liquidity risk. The Group's management manages each risk as discussed below.

Market risk

Currency risk

The Company is exposed to foreign exchange risk arising from various currency exposures, primarily with respect to the U.S. Dollar and Swiss Franc. The Company received the proceeds from financings in U.S. dollars. The Company seeks to minimize exchange rate risk in cash positions by taking into considerations market conditions and keeping currencies in which it expects to incur the majority of its near future expenses and make related payments from those positions.

For the year ended December 31, 2025 the Group recognized a foreign exchange loss of €10.3 million (2024: foreign exchange gain of €7.9 million; 2023: foreign exchange loss of €3.1 million). The foreign exchange losses and gains were primarily related to the U.S. dollar cash holding of the Company's subsidiary and the associated weakening and strengthening of the U.S. dollar compared to euro during the year.

At December 31, 2025, 2024 and 2023, if the U.S. dollar had weakened / strengthened by 10% against the euro with all other variables held constant, the cash balance would have been €18.1 million, €13.5 million and €18.8 million higher / lower, respectively.

At December 31, 2025, 2024 and 2023, if the CHF had weakened / strengthened by 10% against the euro with all other variables held constant, the cash balance would have been €3.8 million, €5.4 million and €7.1 million higher / lower, respectively.

The Group keeps an amount of €72.2 million, \$213.1 million and CHF35.5 million in its bank accounts as of December 31, 2025 (2024: \$139.8 million, €92.4 million and CHF50.6 million).

Interest risk

The Group has no borrowings and is therefore not exposed to changes in the interest rates on loans and borrowings. The Group has €291.7 million of cash on the balance sheet at December 31, 2025. The Group implemented its treasury strategy to monitor the impact of changes in interest rates.

Credit risk

Credit risk arises from cash and other financial assets, including deposits with banks and financial institutions. Cash deposits and investments are placed only with accredited financial institutions. Credit risk is further limited by investing only in liquid instruments. The Group's maximum exposure to credit risk for the components of the statements of financial position on December 31, 2025 and 2024 are the carrying amounts as illustrated in Note 12. There are no financial assets past due date or impaired.

Concentration of Credit Risk

Financial instruments that potentially expose the Group to concentrations of credit risk consist primarily of cash. Cash deposits are placed only with reputable financial institutions with a credit rating of not less than A-(Standard & Poor's). Credit risk is further limited by investing only in liquid instruments. As of December 31, 2025, cash consists of cash deposited with four financial institutions and account balances may exceed insured limits.

111 [Table of Contents](#)

Liquidity risk

Liquidity risk is the risk that the Group might encounter difficulties in meeting the obligations associated with its financial liabilities, which are normally settled by delivering cash. The Group's approach to managing liquidity is to ensure, as far as possible, that it will always have sufficient liquidity to meet its liabilities when due.

As of December 31, 2025, the Company has cash and cash equivalents of €291.7 million.

Based on the existing operating plan, anticipated working capital requirements and available capital sources, the Company believes that it can execute on strategy and realize liquidity planning and it is able to settle all expected liabilities for at least twelve months from the issuance date of these consolidated financial statements.

The Company may need additional funding in the future, which could possibly not be available to the Group at all or not at acceptable or favorable terms. This could lead to a situation where the Group would have to delay, reduce, or eliminate some or all of its research and development programs for product candidates, product portfolio expansion or commercialization efforts, which could adversely affect the business prospects, or continuation of operations.

The Group manages liquidity risks by holding appropriate reserves, taking timely action for future funding, as well as by monitoring forecasts and actual cash flows and reconciling the maturity profiles of financial assets and liabilities.

The below table summarizes the maturity profile of the Group's accrued liabilities based on contractual undiscounted payments:

	Less than 12 months	1 to 5 years	Total
December 31, 2025	€	€	€
Trade and other payables	5,114,186	—	5,114,186
Accrued liabilities	23,348,472	—	23,348,472
Lease Liabilities	310,692	894,952	1,205,644
	Less than 12 months	1 to 5 years	Total
December 31, 2024	€	€	€
Trade and other payables	4,562,900	—	4,562,900
Accrued liabilities	17,588,407	—	17,588,407
Lease Liabilities	354,902	1,006,729	1,361,631

18. Share-based payments

In 2016, the Group implemented an Equity Incentive Plan, or the Plan, in order to advance the interests of the Company's shareholders by enhancing the Company's ability to attract, retain and motivate persons who are expected to make important contributions to the Company and by providing such persons with performance-based incentives that are intended to better align the interests of such persons with those of the Company's shareholders. This plan has been superseded by the 2021 long term incentive plan.

The main terms and conditions of the separate award agreements entered into under these Plans are provided below.

Stock Option Agreements

On April 6, 2023, a total of 846,000 stock options were granted of which 571,000 were granted to members of key management and 296,000 were granted to members of the board, with an exercise price of \$8.05 per share with a final exercise date of April 6, 2033 unless forfeited or exercised on an earlier date. 25% of the aggregate number of share options shall vest on April 6, 2024 and thereafter 1/48th of the aggregate number of share options shall vest on each subsequent monthly anniversary of the vesting commencement date until either the option is fully vested or the option holders' continuous service terminates.

On November 15, 2023, a total of 90,000 stock options were granted to a member of key management with an exercise price of \$16.40 per share with a final exercise date of November 15, 2033 unless forfeited or exercised on an earlier date. 25% of the aggregate number of share options shall vest on November 15, 2024 and thereafter 1/48th of the aggregate number of share options shall vest on each subsequent monthly anniversary of the vesting commencement date until either the option is fully vested or the option holders' continuous service terminates.

On April 11, 2024, a total of 70,000 stock options were granted to members of the Board of Directors with an exercise price of \$22.31 per share with a final exercise date of April 11, 2034, unless forfeited or exercised on an earlier date. 100% of the aggregate number of shares subject to the option shall vest on the 12-month anniversary of the vesting commencement date, subject to the option holder's continuous service.

On April 11, 2024, a total of 485,000 stock options were granted to members of key management with an exercise price of \$22.31 per share with a final exercise date of April 11, 2034, unless forfeited or exercised on an earlier date. 25% of the aggregate number of shares subject to the option shall vest on the 12-month anniversary of the vesting commencement date, and thereafter 1/48th of the aggregate number of Shares subject to the option shall vest on each subsequent monthly anniversary of the vesting commencement date, subject to the option holder's continuous service through each applicable vesting date.

112 [Table of Contents](#)

On April 15, 2024 a total of 230,000 stock options were granted to a member of key management with an exercise price of \$20.15 per share with a final exercise date of April 15, 2034, unless forfeited or exercised on an earlier date. 25% of the aggregate number of shares subject to the option shall vest on the 12-month anniversary of the vesting commencement date, and thereafter 1/48th of the aggregate number of shares subject to the option shall vest on each subsequent monthly anniversary of the vesting commencement date, subject to the option holder's continuous service through each applicable vesting date.

On August 1, 2024 a total of 75,000 stock options were granted to a member of key management with an exercise price of \$15.94 per share with a final exercise date of August 1, 2034, unless forfeited or exercised on an earlier date. 25% of the aggregate number of shares subject to the option shall vest on the 12-month anniversary of the vesting commencement date, and thereafter 1/48th of the aggregate number of shares subject to the option shall vest on each subsequent monthly anniversary of the vesting commencement date, subject to the option holder's continuous service through each applicable vesting date.

On March 12, 2025, a total of 75,000 stock options were granted to members of the Board of Directors with an exercise price of €14.74 per share with a final exercise date of March 11, 2035, unless forfeited or exercised on an earlier date. 100% of the aggregate number of shares subject to the option shall vest on the 12-month anniversary of the vesting commencement date, subject to the option holder's continuous service.

On March 12, 2025, a total of 555,000 stock options were granted to members of key management with an exercise price of €14.74 per share with a final exercise date of March 11, 2035, unless forfeited or exercised on an earlier date. 25% of the aggregate number of shares subject to the option shall vest on the 12-month anniversary of the vesting commencement date, and thereafter 1/48th of the aggregate number of shares subject to the option shall vest on each subsequent monthly anniversary of the vesting commencement date, subject to the option holder's continuous service through each applicable vesting date.

The share-based payment expenses are recognized over the service period in the consolidated statement of loss and comprehensive loss. The share-based payment expense recorded for the years ended December 31, 2025, 2024 and 2023 that related to Options, amounted to €11.2 million, €10.5 million and €6.2 million, respectively.

The following table illustrates the number and weighted average exercise prices of, and movements in, stock options during the year:

	2025	Weighted average exercise price	2024	Weighted average exercise price	2023	Weighted average exercise price
	Number stock options	€	Number stock options	€	Number stock options	€
Outstanding January 1,	3,869,188	12.36	3,830,652	9.46	3,181,538	9.69
Granted	630,000	14.74	860,000	19.79	936,000	6.53
Exercised	(408,989)	1.75	(514,356)	3.41	(241,825)	1.45
Forfeited	(139,167)	16.61	(307,108)	14.79	(45,061)	8.90
Outstanding December 31,	3,951,032	13.01	3,869,188	12.36	3,830,652	9.46

Out of the total outstanding stock options at December 31, 2025, 2,598,455 stock options were exercisable (2024: 2,416,042; 2023: 1,919,721). The options outstanding at December 31, 2025 had an exercise price in the range of €2.38 to €20.8 (2024: €0.01 to €23.10; 2023: €0.01 to €16.88) and a weighted-average remaining contractual life of 6.9 years (2024: 6.1 years; 2023: 6.4 years).

A total of 408,989 share options were exercised during the period ended December 31, 2025, (2024: 514,356; 2023: 241,825) and had a weighted-average share price of €20.09 (2024: €19.34; 2023: €20.08) at the date of exercise.

Restricted Award Agreements

In 2022 the Company granted a total of 681,588 RSUs to employees with a final vesting date four years later unless forfeited on an earlier date. The RSUs shall vest equally over a four-year period on each of the four anniversaries of the vesting start date until either the RSUs are fully vested or the RSUs holders' continuous service terminates. The fair value of the RSUs granted after the IPO is determined based on the closing share price on the grant date. The weighted-average grant date fair value of the RSUs granted in 2022 amounted to €11.84.

In 2023 the Company granted a total of 528,004 RSUs to employees with a final vesting date four years later unless forfeited on an earlier date. The RSUs shall vest equally over a four-year period on each of the four anniversaries of the vesting start date until either the RSUs are fully vested or the RSUs holders' continuous service terminates. The fair value of the RSUs granted after the IPO is determined based on the closing share price on the grant date. The weighted-average grant date fair value of the RSUs granted in 2023 amounted to €9.52.

In 2024 the Company granted a total of 455,799 RSUs to employees with a final vesting date four years later unless forfeited on an earlier date. The RSUs shall vest equally over a four-year period on each of the four anniversaries of the vesting start date until either the RSUs are fully vested or the RSUs holders' continuous service terminates. The fair value of the RSUs granted after the IPO is determined based on the closing share price on the grant date. The weighted-average grant date fair value of the RSUs granted in 2025 amounted to €16.76.

In 2024 the Company granted 249,650 RSUs to existing and newly joining key Management. The RSUs shall vest over a four-year period, with 25% of the aggregate number of RSUs vesting on the 12-month anniversary of the vesting commencement date, and thereafter 1/48th of the aggregate number of RSUs vesting on each subsequent monthly anniversary of the vesting commencement date, subject to continuous service through each applicable vesting date. The weighted-average grant date fair value of the RSUs granted in 2024 amounted to €19.75.

113 [Table of Contents](#)

In 2024 the Company granted 23,335 RSUs to members of the Board of Directors. The RSUs shall vest on the 12-month anniversary of the vesting start date. The weighted-average grant date fair value of the RSUs granted in 2024 amounted to €20.80.

In 2025 the Company granted 440,005 RSUs to employees with a final vesting date four years later unless forfeited on an earlier date. The RSUs shall vest equally over a four-year period on each of the four anniversaries of the vesting start date until either the RSUs are fully vested or the RSUs holders' continuous service terminates. The weighted-average grant date fair value of the RSUs granted in 2025 amounted to €15.12.

In 2025 the Company granted 186,000 RSUs to existing key Management. The RSUs shall vest over a four-year period, with 25% of the aggregate number of RSUs vesting on the 12-month anniversary of the vesting commencement date, and thereafter 1/48th of the aggregate number of RSUs vesting on each subsequent monthly anniversary of the vesting commencement date, subject to continuous service through each applicable vesting date. The weighted-average grant date fair value of the RSUs granted in 2025 amounted to €14.78.

In 2025 the Company granted 25,000 RSUs to members of the Board of Directors. The RSUs shall vest on the 12-month anniversary of the vesting start date. The weighted-average grant date fair value of the RSUs granted in 2025 amounted to €14.82.

The share-based payment expense recorded for the years ended December 31, 2025, 2024 and 2023 that related to RSUs, amounted to €7.8 million, €5.7 million and €4.5 million, respectively.

The following table illustrates the number of and movements in unvested RSUs during the year:

	2025	2024	2023
	Number RSUs	Number RSUs	Number RSUs
Outstanding January 1,	1,272,790	1,033,814	795,694
Granted	651,005	728,784	528,004
Vested and settled	(471,455)	(294,238)	(209,671)
Forfeited	(34,708)	(195,570)	(80,213)
Outstanding December 31,	1,417,632	1,272,790	1,033,814

Fair Value Measurement of the Stock Options

The input used in the measurement of the fair value per option at each grant/measurements date using the Black-Scholes formula (including the related number of options and the fair value of the options) were as follows:

	March 12, 2025	March 12, 2025	August 1, 2024	April 15, 2024	April 11, 2024	April 11, 2024	November 15, 2023	April 6, 2023
Number of options	75,000	555,000	75,000	230,000	70,000	485,000	90,000	846,000
Fair value of the options (€)	€ 11.86	€ 12.19	€ 11.65	€ 15.41	€ 16.83	€ 16.90	€ 12.27	€ 5.92
Fair value of the ordinary shares (€)	€ 14.71	€ 14.71	€ 14.43	€ 18.97	€ 20.80	€ 20.80	€ 15.12	€ 7.36
Exercise price (€)	€ 14.74	€ 14.74	€ 14.43	€ 18.97	€ 20.80	€ 20.80	€ 15.12	€ 7.36
Expected volatility (%)	105%	105%	100%	100%	105%	100%	100%	100%
Expected life (years)	5.5	6.1	6.1	6.1	5.5	6.1	6.1	6.1
Risk-free interest rate (%)	4.3%	4.3%	4.0%	4.7%	4.7%	4.7%	4.6%	3.6%
Expected dividend yield	—	—	—	—	—	—	—	—

Expected volatility in 2025, 2024 and 2023, was based on the volatility of the Company and comparable peer group companies. The expected life is based on Management's best estimate of when the options will be exercised. The risk-free interest rate is based on the yield on US Government bonds. The expected dividend yield is zero considering the stage of the Company.

Reference is made to Note 5 for allocation of expenses in lines of the consolidated statement of income or loss and other comprehensive income (loss).

19. Basic and diluted loss per share

Basic and diluted loss per share is calculated by dividing the loss attributable to equity holders of the Company by the weighted average number of issued and outstanding ordinary shares as well as pre-funded warrants during the year.

114 [Table of Contents](#)

All of the Company's potential dilutive securities have been excluded from the computation of diluted net loss per share attributable to ordinary stockholders as the effect of including them would be antidilutive.

Unvested RSU's and outstanding options are not included in the calculation of diluted earnings per share because they are antidilutive in 2025, 2024 and 2023.

Basic and diluted loss per share

	Year Ended December 31,		
	2025	2024	2023
	€	€	€
Net Loss	(175,699,397)	(134,221,527)	(100,875,068)
Weighted average number of ordinary shares outstanding	59,159,247	54,020,549	38,391,654
Basic and diluted loss per share	(2.97)	(2.48)	(2.63)

20. Related parties

Note 1.2 provides information about the Group's structure, including details of the subsidiaries and the holding company. The following provides the total amount of transactions that have been entered into with related parties for the relevant financial year.

Charité Research Organisation GmbH (Charité CRO)

Dr. Knolle, who served as Chief Scientific Officer and Chief Operating Officer since the Company's inception up to September 30, 2023, was a member of the board of Charité Research Organisation GmbH, or Charité CRO until February 28, 2022. The Company has entered into a service contract with Charité CRO according to which Charité CRO provides services supporting research for the Company. In fiscal year 2023, payments to Charité CRO with respect to this service contract amounted to €0.5 million.

Key management personnel compensation

	2025	2024	2023
	€	€	€
Short term employee benefits	5,393,637	5,291,290	4,467,603
Post employee benefits	262,245	263,873	189,996
Share-based payments	12,217,044	9,012,222	6,252,492
Total	17,872,926	14,567,385	10,910,091

At 31 December 2025, 2024 and 2023, no short-term employee benefits have been capitalized.

The Group engages a management entity for the purpose of providing key management services and/or strategic advisory services to the Company. This management entity is considered a related party, as it provides key management advisory services and exercises key management functions. The aggregate amount of expense recognized in the consolidated statements of loss and comprehensive loss related to this related party for the 2025, 2024 and 2023 fiscal years were €0.7 million, €0.8 million and €0.6 million, respectively.

During 2023, Dr. Jochen Knolle received €0.5 million under his consulting agreement with the Company, while serving as the Company's Chief Scientific Officer ("CSO"). In late 2023, he relinquished the CSO title but remains a consultant.

At December 31, 2025, 2024 and 2023, the aggregate amounts payable to key management personnel were €1.6 million, €1.5 million and €1.4 million, respectively.

	Salary	Bonus	Pension and social securities	Management fee	Share-based compensation	Total remuneration 2025	Total remuneration 2024
	€	€	€	€	€	€	€
Mr. B. Modig	746,382	386,488	237,407	-	3,691,371	5,061,648	3,367,891
Mr. H. Schikan	-	-	-	53,080	323,416	376,496	391,570
Mr. D. Meeker	-	-	-	81,796	324,235	406,031	417,879
Mr. R. Glassman	-	-	-	47,859	324,048	371,907	376,176
Ms. V. Monges	-	-	-	56,561	327,672	384,233	403,863
Ms. E. Björk	-	-	-	39,157	335,067	374,224	401,595

115 [Table of Contents](#)

The tables below shows the number of options granted to individual members of the Board for the year ended December 31, 2025 and 2024 in such capacity.

December 31, 2025

	Number of Options	Exercise Price	Expiration Date
Mr. Modig	180,000	\$ 16.05	March 12, 2035
Dr. Glassman	15,000	\$ 16.05	March 12, 2035
Dr. Meeker	15,000	\$ 16.05	March 12, 2035
Mr. Schikan	15,000	\$ 16.05	March 12, 2035
Ms. Monges	15,000	\$ 16.05	March 12, 2035
Dr. Björk	15,000	\$ 16.05	March 12, 2035

On March 12, 2025, stock options were granted to members of the Board of Directors with an exercise price of €14.74 per share with a final exercise date of March 11, 2035, unless forfeited or exercised on an earlier date. 100% of the aggregate number of shares subject to the option shall vest on the 12-month anniversary of the vesting commencement date, subject to the option holder's continuous service.

December 31, 2024

	Number of Options	Exercise Price	Expiration Date
Mr. Modig	150,000	\$ 22.31	April 11, 2034
Dr. Glassman	14,000	\$ 22.31	April 11, 2034
Dr. Meeker	14,000	\$ 22.31	April 11, 2034
Mr. Schikan	14,000	\$ 22.31	April 11, 2034
Ms. Monges	14,000	\$ 22.31	April 11, 2034
Dr. Björk	14,000	\$ 22.31	April 11, 2034

On April 11, 2024, stock options were granted to members of the Board of Directors with an exercise price of \$22.31 per share with a final exercise date of April 11, 2034, unless forfeited or exercised on an earlier date. 100% of the aggregate number of shares subject to the option shall vest on the 12-month anniversary of the vesting commencement date, subject to the option holder's continuous service.

The table below shows the number of RSU's granted to individual members of the Board for the year ended December 31, 2025 and 2024 in such capacity.

December 31, 2025

	Number of RSU's
Mr. Modig	60,000
Dr. Glassman	5,000
Dr. Meeker	5,000
Mr. Schikan	5,000
Ms. Monges	5,000
Dr. Björk	5,000

December 31, 2024

	Number of RSU's
Mr. Modig	50,000
Dr. Glassman	4,667
Dr. Meeker	4,667
Mr. Schikan	4,667
Ms. Monges	4,667
Dr. Björk	4,667

In March 2025 and April 2024, the Company granted RSUs to members of the Board of Directors. The RSUs shall vest on the 12-month anniversary of the vesting start date.

21. Commitments and contingencies

This section provides additional information about items not recognized in the financial statements but could potentially have a significant impact on the Group's financial position and performance.

Service contracts

The Group has entered into research and development commitments in relation to the developments of the Group's oral bradykinin B2 receptor antagonist.

The Group's contractual obligations and commitments as of December 31, 2025 amounted to €119.2 million (2024: €109.9 million) primarily related to research and development activities.

On March 31, 2016, the Company entered into a license agreement (the "BRAIN License") and a research agreement with BRAIN (as successor in interest to AnalytiCon) to collaborate for the development of an orally available bradykinin B2 receptor antagonist. Pursuant to the BRAIN License, the Company acquired a worldwide, exclusive license from BRAIN to use (i) a certain proprietary substance class of bradykinin B2 receptor antagonists with the potential of oral activity ("OB2RA") and (ii) any derivatives, improvements, analogs, isomers, metabolites, or conjugates therefrom (together "OB2RA Class"), in each case, for the purpose of developing, manufacturing and marketing compounds on a global basis from the OB2RA Class for the treatment of, among others, hereditary angioedema. Certain rights associated with deucricitabant, IR and XR are subject to the BRAIN License.

Under the BRAIN License, up to €8.0 million in aggregate potential milestone payments remain outstanding. In addition, the Company will be required to pay BRAIN low to medium single-digit tiered royalties on direct or indirect net sales of licensed products. The royalties that the Company is required to pay BRAIN under this agreement may be reduced on a country-by-country and product-by-product basis if sales of a generic version of a product account for 1% or more of the relevant market.

22. Contingent liabilities and contingent assets

Other than milestones and royalties discussed in Note 21 above, the Group had no contingent liabilities and no contingent assets at December 31, 2025 and 2024.

23. Events after the reporting period

On May 8, 2026, the Company entered into an underwriting agreement with Morgan Stanley & Co. LLC and Leerink Partners LLC as representatives of the underwriters named therein, pursuant to which the Company agreed to issue and sell in an underwritten offering 4,455,863 ordinary shares, par value €0.12 per share (which includes the exercise in full by the underwriters of their option to purchase up to an additional 581,199 ordinary shares). The offering closed on May 11, 2026, and the Company generated net proceeds of approximately \$124.3 million, after deducting bank fees of approximately \$7.9 million.

Notes to the Company financial statements

General

These company financial statements and the consolidated financial statements together constitute the statutory financial statements of Pharvaris N.V. (hereinafter: the "Company" or "Pharvaris"). The financial information of the Company is included in the Group's consolidated financial statements, as presented on pages 118 to 138. The company's financial statements are prepared based on the accounting principles of recognition, measurement and determination of profit, as applied in the consolidated financial statements.

On September 30, 2015, Pharvaris N.V. was incorporated and is based in Leiden, the Netherlands. The address of its registered office is Emmy Noetherweg 2, Leiden.

The description of the Company's activities and the Group structure as included in the notes to the consolidated financial statements also apply to the company financial statements.

Accounting policies

The 2025 company financial statements including the notes thereon have been prepared in accordance with Part 9 of Book 2 of the Dutch Civil Code. Section 2:362 (8) of the Dutch Civil Code, allows companies that apply IFRS as issued by the European Union in their consolidated financial statements to use the same measurement principles in their company financial statements. Pharvaris has prepared these company financial statements using this provision. These principles also include the classification and presentation of financial instruments, being equity instruments or financial liabilities.

Since Pharvaris N.V.'s statement of profit or loss for 2025 is recognized in the consolidated financial statements, it is sufficient in the company financial statements to present a condensed statement of profit or loss in accordance with section 402 of Book 2 of the Dutch Civil Code.

Participating interest

Consolidated subsidiaries are all entities (including intermediate subsidiaries) over which the company has control. The Company controls an entity when it is exposed, or has rights, to variable returns from its involvement with the subsidiary and has the ability to affect those returns through its power over the subsidiary. Subsidiaries are recognized from the date on which control is transferred to the Company or its intermediate holding entities. They are derecognized from the date that control ceases.

Investments in subsidiaries are measured using the net asset value method. The measurement of the financial fixed assets under the net asset value method is based on the measurement principles of assets, provisions and liabilities, and the determination of profit as applied in the consolidated financial statements. When subsidiaries have an equity deficit they are measured at zero under the net asset value method, unless the Company has given a liability undertaking or any other guarantee for the consolidated group company. In case of the latter, the Company recognizes a provision in the statement of financial position equal to the negative net asset value of the group company. The Company has direct and indirect interests in the subsidiaries listed in the Other Information section of the consolidated financial statements. The company applies the Dutch GAAP with respect to the presentation and disclosure requirements. Under Dutch GAAP the measurement principles applied in the separate financial statements are equal to those applied in the consolidated financial statements due to the fact participating interests and subsidiaries are measured based on the net asset value method (which have similar characteristics to the equity method under IFRS).

Share of result in participating interest

The share of result of participating interests consists of the share of the Group in the results of these participating interests.

Corporate income tax

The Company is the head of the fiscal unity including Pharvaris Holdings B.V. and Pharvaris Netherlands B.V. The Company recognizes the portion of corporate income tax charge that it would owe as an independent taxpayer, taking into account the allocation of the advantages of the fiscal unity. Deferred tax positions are recognized by the head of the fiscal unity in total. Under the standard conditions, the members of the tax group are jointly and severally liable for any corporate income taxes payable by the Company.

Presentation of company financial statements

The structure of the Company statement of financial position and Company Statement of profit or loss are aligned as much as possible with the Consolidated statements in order to achieve optimal transparency between the consolidated financial statements and the company financial statements. The Company statement of financial position has been prepared before the appropriation of results.

1. Financial fixed assets

Movements in the financial fixed assets were as follows:

	Investment in subsidiaries
	€
At January 1, 2025	239,380,167
Movements in book value	
Investments / (conversion into equity)	195,641,896
Exchange differences	(407,895)
Share of loss of participations	(174,487,506)
Other movements	—
At December 31, 2025	20,746,495
Net book value	260,126,662

Pharvaris Holdings B.V. reported a loss of €174.5 million for the year ended December 31, 2025 (2024: €122,576,817).

The investment in subsidiaries is carried at €260.1 million on December 31, 2025 (2024: €239,380,167).

The Company directly holds 100% of the shares of Pharvaris Holdings B.V. (2024: 100%) and indirectly holds 100% of the shares of Pharvaris Netherlands B.V. (2024: 100%), 100% of the shares of Pharvaris Inc. (2024: 100%), 100% of the shares of Pharvaris Pharmaceuticals, Inc (2024: Nil as incorporated in June 2025), 100% of the shares of Pharvaris GmbH (2024: 100%) via Pharvaris Holdings B.V.

2. Receivables

	December 31, 2025	December 31, 2024
	€	€
VAT receivables	137,764	72,002
	137,764	72,002

The receivables do not bear any interest, the fair value approximates the book value. All receivables fall due within one year.

3. Prepayments, other receivables and deferred expenses

	December 31, 2025	December 31, 2024
	€	€
Prepayments	226,863	342,301
Other receivables and deferred expenses	(102,864)	41,945
	<u>123,999</u>	<u>384,246</u>

Prepayments per December 31, 2025 and 2024 mainly relate to prepaid D&O insurance.

4. Cash and cash equivalents

	December 31, 2025	December 31, 2024
	€	€
Cash and cash equivalents	4,278,985	31,872,510
	<u>4,278,985</u>	<u>31,872,510</u>

The Cash and cash equivalents consist of bank balances and are not subject to any restriction.

5. Equity

On December 31, 2025 and 2024, the Company's authorized share capital amounted to € 14.1 million divided into 117,500,000 ordinary shares, each with a nominal value of (€0.12). (2023: authorized share capital amounted to € 14.1 million divided into 58,750,000 ordinary shares and 58,750,000 preferred shares, each with a nominal value of (€0.12).

As of December 31, 2025, the total number of issued and fully paid shares was 65,210,590 (2024: 54,379,491; 2023: 52,290,212).

As of December 31, 2025, the issued share capital totaled €7.8 million (2024: €6.5 million; 2023: €6.3 million).

In March 2022, the Company filed a Form F-3 Registration Statement and prospectus, allowing the Company to sell up to \$350 million of its securities, with the Securities and Exchange Commission. This Registration Statement was supplemented by a prospectus supplement covering an at-the-market program providing for the sales from time to time of up to \$75 million of its ordinary shares pursuant to a Sales Agreement with SVB Securities LLC.

During June, 2023, the Company entered into a subscription agreement with certain institutional investors relating to the offer and sale of 6,951,340 ordinary shares of the Company, par value €0.12 per share, in a private placement at a purchase price of \$10.07 per Ordinary Share. The subscription agreement generated \$70.0 million (€64.1 million).

As of December 31, 2025, the Company has sold a total of 593,927 ordinary shares under the sales agreement generating total net proceeds of €9.3 million (\$9.8 million), after deducting €0.3 million (\$0.3 million), which was payable to Leerink Partners as commission in respect of such sales.

On April 12, 2024, the Company terminated the March 2022 sales agreement and entered into a new sales agreement with Leerink Partners (the "April 2024 Sales Agreement"), pursuant to which it may sell ordinary shares having an aggregate offering price of up to \$175 million from time to time through Leerink Partners. In April 2024, the Company filed a Form F-3 ASR Registration Statement (the "F-3 ASR") and prospectus, allowing the Company to sell an unspecified amount of its securities with the Securities and Exchange Commission. The F-3 ASR was supplemented by a prospectus supplement covering an at-the-market program providing for the sales from time to time of up to \$175 million of its ordinary shares pursuant to the April 2024 Sales Agreement.

In December, 2023, the Company entered into an underwriting agreement with Morgan Stanley & Co. LLC and Leerink Partners, LLC as underwriters, pursuant to which the Company agreed to issue and sell (i) 11,125,000 ordinary shares, par value €0.12 per share and (ii) pre-funded warrants to purchase up to 1,375,000 ordinary shares in an underwritten offering. The Offering closed on December 8, 2023, and the Company generated net proceeds of \$282.0 million (€261.6 million), after deducting bank fees of \$18.0 million (€16.7 million).

The Shares were sold in the Offering at the public offering price of \$24.00 per share. The Pre-Funded Warrants were sold at a public offering price of \$23.99 per Pre-Funded Warrant, which represents the per share public offering price for the common stock less the \$0.01 per share exercise price for each such Pre-Funded Warrant. Each Pre-Funded Warrant is exercisable as of December 8, 2023 until fully exercised, subject to an ownership limitation relating to the Hart-Scott-Rodino Antitrust Improvements Act of 1976, as amended, as set forth in the form of Pre-Funded Warrant.

The Pre-funded warrants were subsequently exercised in January 2024 for gross exercise proceeds of \$0.01 million and resulted in issuance of 1,375,000 ordinary shares.

In March 2024, the Company received a partial reimbursement for certain of its expenses in connection with the December 2023 offering which have been accounted for in the share premium.

In July 2025, the Company entered into an underwriting agreement with Morgan Stanley & Co. LLC and Leerink Partners, LLC as representatives of the underwriters, pursuant to which the Company agreed to issue and sell (i) 9,562,500 ordinary shares, par value €0.12 per share and (ii) pre-funded warrants to purchase up to 500,000 ordinary shares in an underwritten offering. The offering closed on July 24, 2025, and the Company generated net proceeds of €160.3 million (\$188.5 million), after deducting fees and expenses of €10.9 million (\$12.8 million).

The pre-funded warrants were exercised in September 2025 for gross exercise proceeds of €0.004 million (\$0.005 million) and resulted in issuance of 500,000 ordinary shares.

Ordinary shares hold the right to one vote per share.

Legal reserve

As of December 31, 2025 the legal reserve amounted to (€270,169) (2024: €137,726) and relate to unrealized currency translation losses. Pursuant to Dutch law, limitations exist relating to the distribution of shareholder's equity for the entire amount of legal reserve. By their nature, unrealized losses relating to the currency translation differences reduce shareholders' equity and thereby distributable amounts.

Appropriation of the result for 2025 and 2024

The result for the years 2025 and 2024 has been transferred to accumulated losses.

Difference in equity and loss between the company and consolidated financial statements

There is no difference between equity according to the company balance sheet and equity according to the consolidated balance sheet as well as the result according to the Company income statement and result according to the consolidated income statement for the year ended December 31, 2025 and 2024.

PricewaterhouseCoopers

6. Trade and other payables

	December 31, 2025	December 31, 2024
	€	€
Trade payables	324,694	593,569
	324,694	593,569

Trade and other payables fall due within one year. The trade and other payables do not bear any interest and the carrying value approximates the fair value.

7. Accrued liabilities

	December 31, 2025	December 31, 2024
	€	€
Consulting and accounting fee accruals	138,484	272,171
	138,484	272,171

All the accrued liabilities are due within twelve months after year-end and qualify as short-term liabilities. The carrying value of accrued liabilities approximates the fair value.

8. Receivable / (Payable) to subsidiaries

	December 31, 2025	December 31, 2024
	€	€
Receivable / (Payable) to subsidiaries	6,362,099	(3,780,949)
	<u>6,362,099</u>	<u>3,780,949</u>

The receivable/ (payable) to subsidiaries are in a current account with group companies, which is directly claimable. The fair value of the payable to subsidiaries approximates the carrying amount.

9. Commitments and contingencies

The Company had no contingent liabilities and no contingent assets at December 31, 2025 and 2024.

Fiscal unity

The Company is the head of the fiscal unity Pharvaris N.V. in the Netherlands for income taxes and is jointly and severally liable for the income tax liabilities of the fiscal unity. Reference is made to note 11 of these financial statements.

10. Share in results of participating interests

This represents the share of the Company in the results of its participating interest of Pharvaris Holdings B.V. Reference is made to Note 1 of these financial statements.

11. Income taxes

Pharvaris N.V. forms a corporate income tax group, fiscal unity, with Pharvaris Netherlands B.V. and Pharvaris Holdings B.V. As head of the fiscal unity, the company financial statements of Pharvaris N.V. recognize the entire tax position of the fiscal unity.

The current tax expenses of €Nil for the year ended December 31, 2025. Tax charge in 2024 was €506,139, and related to the result of a cost-plus agreement between the Dutch entities and the Group's principal entity in Switzerland resulting in a taxable profit in the Netherlands. In addition, a deferred tax loss of €851,662 for the year ended December 31, 2023 which was directly recognized in equity as a benefit and related to the deferred tax effect of share issuance costs accounted for in share premium, but which are tax deductible.

Furthermore, in 2025 and 2024, a deferred tax expense of € 208,186 was recognized for temporary valuation differences on the intangible fixed asset for fiscal purposes, which was fully offset by a deferred tax benefit of €260,854 (2024: €361,475) due to a decrease in balance for the non-recognized deferred tax assets.

All the tax liabilities are due within twelve months after year-end and qualify as short-term liabilities. The total tax expenses for the year ended December 31, 2024 amounts €52,668 (2024: €1,204,512)

The Company did not recognize the tax benefit of the losses incurred in previous years. The fiscal unity has tax loss carry-forwards of approximately €33.9 million (2024: €26.2 million), that are available for offsetting against future taxable profits of the companies in which the losses arose.

Tax loss carry-forwards incurred in current and prior years will expire as follows:

Year	Tax losses € million
Unlimited	33.9
Total carry-forward losses	33.9

Deferred tax

Deferred tax assets relating to losses carried forward have not been recognized, and deferred tax assets on deductible temporary differences in excess of deferred tax liabilities on taxable temporary differences have not been recognized in the statement of profit or loss. Deferred taxes have been recognized to the extent that management concludes that there is sufficient probability as per IAS 12 that there will be future taxable profits available in the foreseeable future against which the unused tax losses can be utilized.

The total unrecognized deferred tax assets from temporary differences amounts to €9.4 million (2024: €7.8 million). No deferred tax balances in relation to investments in subsidiaries, associates and interests in joint arrangements are considered, due to the fact that the timing of the reversal of the temporary differences can be controlled by the Company and it is probable that the temporary differences will not reverse in the foreseeable future.

12. Related parties

Note 1.2 of the consolidated financial statements provides information about the Group's structure, including details of the subsidiaries and the holding company and the total amount of transactions that have been entered into with related parties for the relevant financial year. Reference is made to Note 20 of the consolidated financial statements.

13. Remuneration of the board of Directors and Key management

The emoluments, including pension costs as referred to in Section 2:383(1) of the Netherlands Civil Code, charged in the financial year to the Company and group companies by the Board of Directors members amounts to €6,974,539 (2024: €5,358,974).

The below table shows the remuneration of the individual members of the Board of Directors for the year ended December 31, 2025 and 2024 in euro:

	Salary	Bonus	Pension and social securities	Management fee	Share-based compensation	Total remuneration 2025	Total remuneration 2024
	€	€	€	€	€	€	€
Mr. B. Modig	746,382	386,488	237,407	-	3,691,371	5,061,648	3,367,891
Mr. H. Schikan	-	-	-	53,080	323,416	376,496	391,570
Mr. D. Meeker	-	-	-	81,796	324,235	406,031	417,879
Mr. R. Glassman	-	-	-	47,859	324,048	371,907	376,176
Ms. V. Monges	-	-	-	56,561	327,672	384,233	403,863
Ms. E. Björk	-	-	-	39,157	335,067	374,224	401,595

Mr. Modig has received a bonus on the realization of targets set by the Group.

Share-based compensation represents the impact in the result of the Company for the expenses granted to the members of the Board of Directors.

The Key management of the Group is paid through the group companies, no costs related to Key management are included in the company financial statements. Further reference is made to note 20 of the consolidated financial statements.

14. Employee benefits and information

The Company had no employees during the fiscal year 2025 or 2024.

The Company is responsible for settling share-based payment transactions with employees of its subsidiaries, and these are recognized as equity-settled share-based payment transactions since they are settled in shares of the Company. Total costs related to share-based payments for €19,050,394 (2024: €16,208,533) are included in “Share in results of participating interests” in the company financial statements, with a corresponding adjustment to equity. Reference is made to note 18 in the consolidated financial statements for disclosure on the share-based payments.

15. Independent Auditor's fee

	2025	2024
	€	€
Audit services	583,600	622,000
Other assurance services	169,925	170,000
	<u>753,525</u>	<u>792,000</u>

Other assurance services relate mainly to quarterly reviews of financial statements.

16. Events after the reporting period

On May 8, 2026, the Company entered into an underwriting agreement with Morgan Stanley & Co. LLC and Leerink Partners LLC as representatives of the underwriters named therein, pursuant to which the Company agreed to issue and sell in an underwritten offering 4,455,863 ordinary shares, par value €0.12 per share (which includes the exercise in full by the underwriters of their option to purchase up to an additional 581,199 ordinary shares). The offering closed on May 11, 2026, and the Company generated net proceeds of approximately \$124.3 million, after deducting bank fees of approximately \$7.9 million.

Report on the audit of the financial statements 2025

Our opinion

In our opinion, the financial statements of Pharvaris N.V. ('the Company') give a true and fair view of the financial position of the Company and the Group (the Company together with its subsidiaries) as at 31 December 2025, and of its result and its cash flows for the year then ended in accordance with IFRS Accounting Standards as adopted by the European Union ('EU') and with Part 9 of Book 2 of the Dutch Civil Code.

What we have audited

We have audited the accompanying financial statements 2025 of Pharvaris N.V., Leiden. The financial statements comprise the consolidated financial statements of the Group and the company financial statements.

The consolidated financial statements comprise:

- the consolidated statement of financial position as at 31 December 2025;
- the following statements for 2025: the consolidated statement of loss and comprehensive loss, the consolidated statement of changes in shareholders' equity and the consolidated statement of cash flows; and
- the notes to the consolidated financial statements, including material accounting policy information and other explanatory information.

The company financial statements comprise:

- the statement of financial position as at 31 December 2025;

PricewaterhouseCoopers Accountants N.V., Thomas R. Malthusstraat 5, 1066 JR Amsterdam,
P.O. Box 90357, 1006 BJ Amsterdam, the Netherlands, T: +31 (0) 88 792 00 20, www.pwc.nl

'PwC' is the brand under which PricewaterhouseCoopers Accountants N.V. (Chamber of Commerce 34180285), PricewaterhouseCoopers Belastingadviseurs N.V. (Chamber of Commerce 34180284), PricewaterhouseCoopers Advisory N.V. (Chamber of Commerce 34180287), PricewaterhouseCoopers Compliance Services B.V. (Chamber of Commerce 51414406), PricewaterhouseCoopers Pensions, Actuarial & Insurance Services B.V. (Chamber of Commerce 54226368), PricewaterhouseCoopers B.V. (Chamber of Commerce 34180289) and other companies operate and provide services. These services are governed by General Terms and Conditions ('algemene voorwaarden'), which include provisions regarding our liability. Purchases by these companies are governed by General Terms and Conditions of Purchase ('algemene inkoopvoorwaarden'). At www.pwc.nl more detailed information on these companies is available, including these General Terms and Conditions and the General Terms and Conditions of Purchase, which have also been filed at the Amsterdam Chamber of Commerce.

- the statement of profit or loss for the year then ended; and
- the notes to the company financial statements, comprising a summary of the accounting policies applied and other explanatory information.

The financial reporting framework applied in the preparation of the financial statements is IFRS Accounting Standards as adopted by the EU and the relevant provisions of Part 9 of Book 2 of the Dutch Civil Code.

The basis for our opinion

We conducted our audit in accordance with Dutch law, including the Dutch Standards on Auditing. We have further described our responsibilities under those standards in the section ‘Our responsibilities for the audit of the financial statements’ of our report.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Independence

We are independent of Pharvaris N.V. in accordance with the ‘Wet toezicht accountantsorganisaties’ (Wta, Audit firms supervision act), the ‘Verordening inzake de onafhankelijkheid van accountants bij assuranceopdrachten’ (ViO, Code of Ethics for Professional Accountants, a regulation with respect to independence) and other relevant independence regulations in the Netherlands. Furthermore, we have complied with the ‘Verordening gedrags- en beroepsregels accountants’ (VGBA, Dutch Code of Ethics).

Our audit approach

We designed our audit procedures with respect to the key audit matters, fraud and going concern, and the matters resulting from that, in the context of our audit of the financial statements as a whole and in forming our opinion thereon. Therefore, we do not provide separate opinions or conclusions on information in support of our opinion, such as our findings and observations related to individual key audit matters and the audit approach to address fraud risk and going concern.

Overview and context

Pharvaris N.V. is a late-stage biopharmaceutical company focused on the development and commercialization of innovative therapies for rare diseases with significant unmet need, initially focused on angioedema and other bradykinin-mediated diseases. Pharvaris N.V. was incorporated on 30 September 2015 and is headquartered in Leiden, the Netherlands. It is the parent company of a group of entities, whose financial information is also included in the consolidated financial statements.

As part of designing our audit, we determined materiality and assessed the risks of material misstatement in the financial statements. In particular, we considered where management made important judgements, for example, in respect of significant accounting estimates that involved making assumptions and considering future events that are inherently uncertain.

In note 2.19 of the consolidated financial statements, the Company describes the areas of judgement in applying accounting policies and the key sources of estimation uncertainty. Given the significant management judgement over the determination of Research and Development accruals; Clinical and Manufacturing accruals and services provided as of year end, we considered this to be a key audit matter as set out in the section 'Key audit matters' of this report.

Other areas of focus, that were not considered as key audit matters, were the accounting and disclosure related to share-based payments and the accounting for deferred taxes.

We ensured that the audit team included the appropriate skills and competences which are needed for the audit of a clinical stage biopharmaceutical company. We therefore included experts and specialists in the area of amongst others IT and share-based payments in our team.

The outline of our audit approach was as follows:

Overall materiality: €8,700,000.

We performed the audit procedures for the audit of the consolidated and company financial statements as the financial reporting and accounting functions for all entities in the Group are located, operated, and managed centrally in Leiden.

Audit coverage: 99% of total assets and 99% of loss before tax.

Research and Development accruals; Clinical and Manufacturing accruals

Materiality

The scope of our audit was influenced by the application of materiality, which is further explained in the section 'Our responsibilities for the audit of the financial statements'.

Based on our professional judgement we determined certain quantitative thresholds for materiality, including the overall materiality for the financial statements as a whole as set out in the table below. These, together with qualitative considerations, helped us to determine the nature, timing and extent of our audit procedures on the individual financial statement line items and disclosures and to evaluate the effect of identified misstatements, both individually and in aggregate, on the financial statements as a whole and on our opinion.

Overall group materiality	€8,700,000 (2024: €6,500,000).
Basis for determining materiality	We used our professional judgement to determine overall materiality. As a basis for our judgement, we used 5% of 'loss before tax'.
Rationale for benchmark applied	We used 'loss before tax' as the primary benchmark, a generally accepted auditing practice, based on our analysis of the common information needs of the users of the financial statements. On this basis, we believe that 'loss before tax' is the most relevant metric for the financial performance of the Company.

We also take misstatements and/or possible misstatements into account that, in our judgement, are material for qualitative reasons.

We agreed with management that we would report to them any misstatement identified during our audit above €400,000 (2024: €325,000) as well as misstatements below that amount that, in our view, warranted reporting for qualitative reasons.

The scope of our group audit

Pharvaris N.V. is the parent company of a group of entities. The financial information of this group is included in the consolidated financial statements of Pharvaris N.V.

We are responsible for the identification and assessment of the risks of material misstatement of the financial statements of the group, including those with respect to the consolidation process. Based on our risk assessment, we tailored the scope of our audit to ensure that we, in aggregate, performed sufficient work on the financial statements to enable us to provide an opinion on the financial statements as a whole.

We tailored the scope of our audit to ensure that we, in aggregate, provide sufficient coverage of the financial statements for us to be able to give an opinion on the financial statements as a whole, taking into account the management structure of the Group, the nature of operations of its components, the accounting processes and controls, and the markets in which the components of the Group operate. In establishing the overall group audit strategy and plan, we determined that we, as the group engagement team, will perform all the audit procedures for the audit of the Group and company financial statements as the financial reporting and accounting functions for all entities in the Group are located, operated, and managed centrally in Leiden.

In total, in performing these procedures, we achieved the following coverage on the financial line items:

Total assets	99%
Loss before tax	99%

By performing the procedures outlined above, we have been able to obtain sufficient and appropriate audit evidence on the Group's financial information, to provide a basis for our opinion on the financial statements.

Audit approach fraud risks

We identified and assessed the risks of material misstatements in the financial statements due to fraud. During our audit we obtained an understanding of Pharvaris N.V. and its environment and the components of the internal control system. This included management's risk assessment process, management's process for responding to the risks of fraud and monitoring the internal control system. We note that management has not formalised its fraud risk assessment.

We evaluated the design and implementation of relevant aspects of the internal control system with respect to the risks of material misstatements due to fraud and in particular the fraud risk assessment, as well as the code of conduct and whistleblower procedures. We evaluated the design and the implementation and, where considered appropriate, tested the operating effectiveness of internal controls designed to mitigate fraud risks.

We performed inquiries with senior management to evaluate their fraud awareness, the internal control environment in relation to fraud, the 'tone at the top' and entity-level controls.

We asked members of management as well as the human resources department, legal and compliance department and senior management whether they were aware of any actual or suspected fraud. This did not result in signals of actual or suspected fraud that may lead to a material misstatement.

As part of our process of identifying fraud risks, we evaluated fraud risk factors with respect to financial reporting fraud, misappropriation of assets and bribery and corruption. We evaluated whether these factors indicate that a risk of material misstatement due to fraud is present.

We identified the following fraud risks and performed the following specific procedures:

Identified fraud risks	Our audit work and observations
The risk of management override of controls Management is in a unique position to perpetrate fraud because of management's ability to manipulate accounting records and prepare fraudulent financial statements by overriding controls that otherwise appear to be operating effectively. That is why, in all our audits, we pay attention to the risk of management override of controls in: • The appropriateness of journal entries and other adjustments made in the preparation of the financial statements. • Estimates. We pay particular attention to tendencies due to possible bias of management.	We evaluated the design and implementation of the internal control system in the processes of generating and processing journal entries and making estimates. We also paid specific attention to the access safeguards in the IT system and the possibility that this will lead to violations of the segregation of duties. We selected journal entries based on risk criteria and conducted specific audit procedures for these entries. These procedures include, amongst others, inspection of the entries to source documentation. We also performed specific audit procedures related to estimates of management as disclosed in Note 2.19 to the financial statements. We specifically paid attention to the inherent risk of bias of management in estimates. Our audit procedures did not lead to specific indications of fraud or suspicions of fraud with respect to management override of controls.

We incorporated an element of unpredictability in our audit. We reviewed lawyer's letters. During the audit, we remained alert to indications of fraud. Furthermore, we considered the outcome of our other audit procedures and evaluated whether any findings were indicative of fraud.

Audit approach going concern

As disclosed in section 2.2 *Going concern* of the financial statements management performed its assessment of the Company's ability to continue as a going concern for at least 12 months from the date of preparation of the financial statements and has not identified events or conditions that may cast significant doubt on the Company's ability to continue as a going concern (hereafter: going-concern risks).

Our procedures to evaluate management's going-concern assessment included, amongst others:

- considering whether management’s going-concern assessment included all relevant information of which we were aware as a result of our audit by review of the minutes of meetings of the board of directors and inquiring with management regarding management’s most important assumptions underlying its going-concern assessment;
- evaluating management’s current budget including cash flows for at least 12 months from the date of preparation of the financial statements taken into account current developments and all relevant information of which we were aware as a result of our audit;
- obtaining independent external confirmations for the cash balance as at 31 December 2025;
- performing inquiries of management as to its knowledge of going-concern risks beyond the period of management’s assessment.

Our procedures did not result in outcomes contrary to management’s assumptions and judgements used in the application of the going-concern assumption.

Key audit matters

Key audit matters are those matters that, in our professional judgement, were of most significance in the audit of the financial statements. We have communicated the key audit matters to board of directors, audit committee and management. The key audit matters are not a comprehensive reflection of all matters identified by our audit and that we discussed. In this section, we described the key audit matters and included a summary of the audit procedures we performed on those matters.

Considering the nature of the Group’s business activities as well as the industry in which it operates, we consider the Research and Development Clinical and Manufacturing Accruals as a key audit matter for the current year.

Key audit matter	Our audit work and observations
Research and Development; Clinical and Manufacturing Accruals	The procedures we performed to address this key audit matter included:

Key audit matter	Our audit work and observations
As described in Notes 2.16 and 16 to the consolidated financial statements, the Company estimates the level of services performed by vendors and the associated cost incurred for the research and development services performed. The Company has recorded €5.8 million and €2.9 million for clinical accrued liabilities and manufacturing accrued liabilities respectively for the estimated research and development costs incurred but not yet billed or paid as of 31 December 2025. These accruals relate to obligations under contracts with clinical research organizations ('CROs'), manufacturers, vendors and consultants. The principal consideration for our determination that performing procedures relating to research and development clinical and manufacturing accruals is a key audit matter is the high degree of auditor effort in performing procedures related to the Company's research and development clinical and manufacturing accruals. Accordingly, the existence of significant management judgement warrants specific audit focus and attention on this area.	• Testing the design and operating effectiveness of the controls relating to management's research and development clinical and manufacturing accruals. • We obtained audit evidence regarding the research and development accruals and performed substantive testing procedures on the balance as at 31 December 2025. These procedures included: i) reviewing the Company's contractual agreements with respective clinical research organizations and any related changes to them; (ii) testing management's process for developing the research and development clinical and manufacturing accrual estimate; (iii) evaluating the appropriateness of management's process for developing the estimate; (iv) testing the completeness and accuracy of underlying data used in the process; (v) evaluating the accuracy of the estimated costs incurred for the services which have not been invoiced; and (vi) testing classification of research and development expenses. • We reviewed the disclosures in note 16 to the consolidated financial statements and deemed the disclosures in line with the requirements of applicable financial reporting framework. We did not have any material findings based on the audit work performed and the audit evidence obtained.

Compliance with the requirements of the Regulatory Technical Standard of SBR, including the XBRL mark up, not audited

The audit includes the verification that the prepared financial statements comply with the legal provisions in IFRS Accounting Standards as adopted by the EU and with Part 9 of Book 2 of the Dutch Civil Code. Our audit opinion is issued on the prepared financial statements and will be included in the digitally filed annual report. The compliance with all requirements of the Regulatory Technical Standard of the SBR domain Trade Register, including the applied eXtensible Business Reporting Language (XBRL) mark ups, was not subject to our audit.

Report on the other information included in the annual report

The annual report contains other information. This includes all information in the annual report in addition to the financial statements and our auditor's report thereon.

Based on the procedures performed as set out below, we conclude that the other information:

- is consistent with the financial statements and does not contain material misstatements; and
- contains all the information regarding the report of board of directors and the other information that is required by Part 9 of Book 2 of the Dutch Civil Code.

We have read the other information. Based on our knowledge and the understanding obtained in our audit of the financial statements or otherwise, we have considered whether the other information contains material misstatements.

By performing our procedures, we comply with the requirements of Part 9 of Book 2 of the Dutch Civil Code and the Dutch Standard 720. The scope of such procedures was substantially less than the scope of those procedures performed in our audit of the financial statements.

Management is responsible for the preparation of the other information, including the report of board of directors and the other information in accordance with Part 9 of Book 2 of the Dutch Civil Code.

Report on other legal and regulatory requirements

Our appointment

We were appointed as auditors of Pharvaris N.V. This followed the passing of a resolution by the shareholders at the annual general meeting held on 2 June 2020. Our appointment has been renewed annually by shareholders and now represents a total period of uninterrupted engagement of 6 years.

Responsibilities for the financial statements and the audit

Responsibilities of management

Management is responsible for:

- the preparation and fair presentation of the financial statements in accordance with IFRS Accounting Standards as adopted by the EU and Part 9 of Book 2 of the Dutch Civil Code; and for
- such internal control as management determines is necessary to enable the preparation of the financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is responsible for assessing the Company's ability to continue as a going concern. Based on the financial reporting frameworks mentioned, management should prepare the financial statements using the going-concern basis of accounting unless management either intends to liquidate the Company or to cease operations or has no realistic alternative but to do so. Management should disclose in the financial statements any event and circumstances that may cast significant doubt on the Company's ability to continue as a going concern.

Our responsibilities for the audit of the financial statements

Our responsibility is to plan and perform an audit engagement in a manner that allows us to obtain sufficient and appropriate audit evidence to provide a basis for our opinion. Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error and to issue an auditor's report that includes our opinion. Reasonable assurance is a high but not absolute level of assurance and is not a guarantee that an audit conducted in accordance with the Dutch Standards on Auditing will always detect a material misstatement when it exists. Misstatements may arise due to fraud or error. They are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of the financial statements.

Materiality affects the nature, timing and extent of our audit procedures and the evaluation of the effect of identified misstatements on our opinion.

We have exercised professional judgement and have maintained professional scepticism throughout the audit in accordance with Dutch Standards on Auditing, ethical requirements and independence requirements. Our audit consisted, among other things of the following:

- Identifying and assessing the risks of material misstatement of the financial statements, whether due to fraud or error, designing and performing audit procedures responsive to those risks, and obtaining audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or intentional override of internal control.
- Obtaining an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control.
- Evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management.

- Concluding on the appropriateness of management's use of the going-concern basis of accounting, and based on the audit evidence obtained, concluding whether a material uncertainty exists related to events and/or conditions that may cast significant doubt on the Company's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report and are made in the context of our opinion on the financial statements as a whole. However, future events or conditions may cause the Company to cease to continue as a going concern.
- Evaluating the overall presentation, structure and content of the financial statements, including the disclosures, and evaluating whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

We are responsible for planning and performing the group audit to obtain sufficient appropriate audit evidence regarding the financial information of the entities or business units within the group as a basis for forming an opinion on the financial statements. We are also responsible for the direction, supervision and review of the audit work performed for purposes of the group audit. We remain solely responsible for our audit opinion.

We communicate with the board of directors regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We provide the board of directors with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, related actions taken to eliminate threats or safeguards applied.

From the matters communicated with the the board of directors, we determine those matters that were of most significance in the audit of the financial statements of the current period and are therefore the key audit matters. We describe these matters in our auditor's report unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, we determine that a matter should not be communicated in our report because the adverse consequences of doing so would reasonably be expected to outweigh the public interest benefits of such communication.

Amsterdam, 29 May 2026
