

# Corporate Presentation

---

May 2024

*Pioneering science for patient choice*

# Disclaimer

This Presentation contains certain “forward-looking statements” within the meaning of the federal securities laws that involve substantial risks and uncertainties. All statements contained in this Presentation that do not relate to matters of historical fact should be considered forward-looking statements including, without limitation, statements containing the words “believe,” “anticipate,” “expect,” “estimate,” “may,” “could,” “should,” “would,” “will,” “intend” and similar expressions. We have based these forward-looking statements largely on our current expectations and projections about future events and trends that we believe may affect our financial condition, results of operations, business strategy and financial needs. Such forward-looking statements involve unknown risks, uncertainties and other factors which may cause our actual results, financial condition, performance or achievements, or industry results, to be materially different from any future results, performance or achievements expressed or implied by such forward-looking statements. Factors that might cause such a difference include, but are not limited to, uncertainty in the outcome of our interactions with regulatory authorities, including the FDA, with respect to clinical trials in the U.S. and our ability to resolve any issues to the satisfaction of the FDA or any regulatory agency in a timely manner, the expected timing, progress, or success of our clinical development programs, especially for deucricitibant, which is in late-stage global clinical trials, our ability to replicate the efficacy and safety demonstrated in the RAPIDe-1 and CHAPTER-1 Phase 2 studies in ongoing and future nonclinical studies and clinical trials, risks arising from epidemic diseases such as the COVID-19 pandemic, which may adversely impact our business, nonclinical studies, and clinical trials, the outcome and timing of regulatory approvals and the value of our ordinary shares, the timing, costs and other limitations involved in obtaining regulatory approval for our product candidates, deucricitibant immediate-release capsules (PHVS416) and deucricitibant extended-release tablets (PHVS719), or any other product candidate that we may develop in the future, our ability to establish commercial capabilities or enter into agreements with third parties to market, sell, and distribute our product candidates, our ability to compete in the pharmaceutical industry, including with respect to existing therapies, emerging potentially competitive therapies and with competitive generic products, our ability to market, commercialize and achieve market acceptance for our product candidates, our ability to raise capital when needed and on acceptable terms, regulatory developments in the United States, the European Union and other jurisdictions, our ability to protect our intellectual property and know-how and operate our business without infringing the intellectual property rights or regulatory exclusivity of others, our ability to manage negative consequences from changes in applicable laws and regulations, including tax laws, our ability to successfully remediate the material weaknesses in our internal control over financial reporting and to maintain an effective system of internal control over financial reporting, our expectations regarding the time during which we will be an emerging growth company under the JOBS Act or a foreign private issuer, changes and uncertainty in general market, political and economic conditions, including as a result of inflation and the current conflict between Russia and Ukraine, the Israel-Hamas war, and the other factors described under the headings “Cautionary Statement Regarding Forward-Looking Statements” and “Item 3. Key Information--D. Risk Factors” in our Annual Report on Form 20-F and other periodic filings with the Securities and Exchange Commission. New risks and uncertainties may emerge from time to time, and it is not possible to predict all risks and uncertainties. We undertake no obligation to publicly update any forward-looking statements, whether as a result of new information, future events or otherwise, except as required by law.

This presentation includes data for an investigational product not yet approved by regulatory authorities. Certain information contained in this Presentation relates to or is based on studies, publications, surveys and other data obtained from third-party sources and the Company’s own internal estimates and research. While the Company believes these third-party sources to be reliable as of the date of this presentation, it has not independently verified, and makes no representation as to the adequacy, fairness, accuracy or completeness of, any information obtained from third-party sources. In addition, all of the market data included in this Presentation involves a number of assumptions and limitations, and there can be no guarantee as to the accuracy or reliability of such assumptions. Finally, while we believe our own internal research is reliable, such research has not been verified by any independent source.

# Focused on unmet need in the treatment of hereditary angioedema (HAE) and other bradykinin-mediated diseases

## Competitive product profile

- Deep expertise in bradykinin/B2 receptor biology and chemistry
- Orally available, small molecule targeting the **validated bradykinin B2 receptor pathway**
- **Positive top-line Phase 2 data in HAE:**
  - RAPIDe-1 study for **on-demand treatment** meets **all primary and key secondary endpoints**
    - RAPIDe-3 Phase 3 study currently enrolling
  - CHAPTER-1 study in **prophylaxis** meets **primary endpoint** and showed **clinically meaningful improvements** for secondary endpoints
    - Preparing for initiation of CHAPTER-3 Phase 3 study

## Large market opportunity

- **Large global HAE market:**
  - >\$2 billion with predicted 15% CAGR
- Potential portfolio expansion into other BK-mediated angioedema and diseases through **B2-receptor pathway expertise**

## Strong fundamentals

- **World-wide operations:** the Netherlands, U.S., and Switzerland (headquarters)
- Strong financial position, cash runway at least two years:
  - Approximately **€368M cash** as of March 31, 2024
- Experienced management **team with successful track record** in HAE drug design and development
- **Strong IP on novel lead and backup series**
  - Primary CoM granted in multiple territories, initial term to 2038
- **FDA orphan drug designation**

# Deucrictibant: A novel, orally bioavailable bradykinin B2 receptor antagonist for bradykinin-mediated angioedema

- Currently in late-stage development for hereditary angioedema
- Potent inhibition of the bradykinin B2 receptor to compete with bradykinin, the ultimate driver of swelling attacks
- Results from Phase 1 and Phase 2 studies demonstrate rapid absorption, exposure, efficacy in treating and preventing HAE attacks, and good tolerability
- Dose and exposure threshold predicted from human surrogate endpoint for both on-demand and prophylaxis

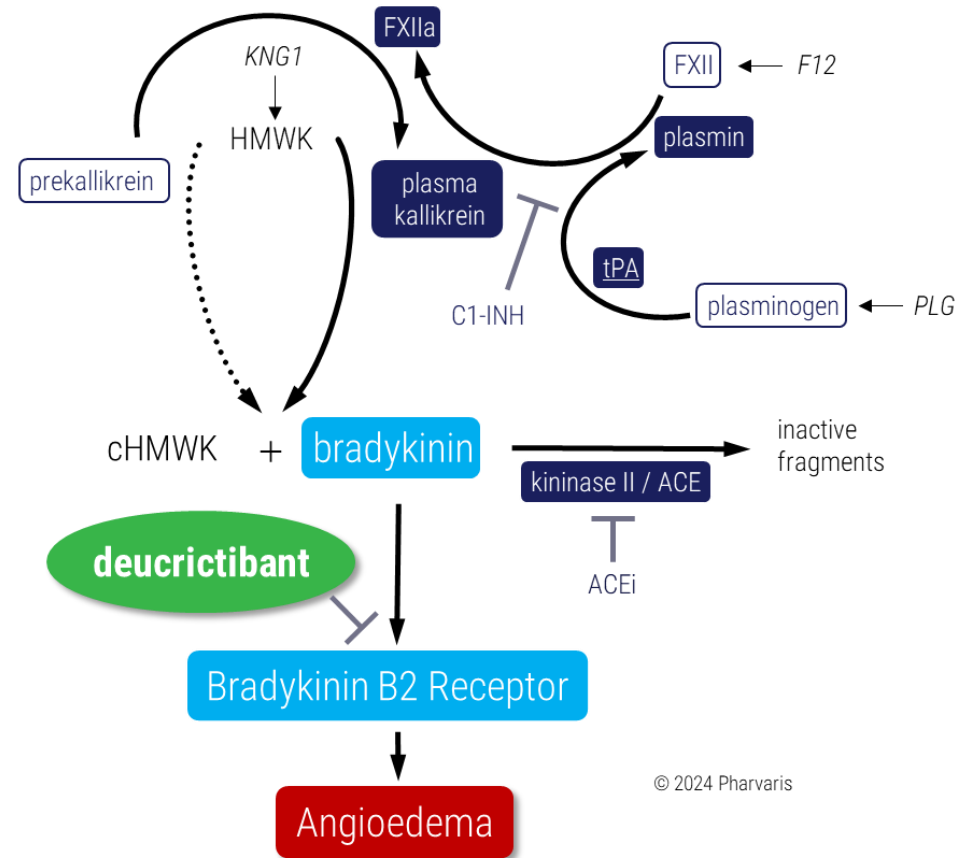

We aspire to develop novel, oral alternatives that improve the standard of care for people living with HAE and other bradykinin-mediated diseases

**Notes:** HMWK: high-molecular-weight kininogen; cHMWK: cleaved high-molecular-weight kininogen; FXII(a): Factor XII(a); ACE(i): angiotensin-converting enzyme (inhibitor); tPA: tissue plasminogen activator; KNG1: gene encoding HMWK; PLG: gene encoding plasminogen; FXII: gene encoding FXII; ANGPT: gene encoding angiotensin-converting enzyme; MYOF: gene encoding myoferlin; HSST: gene encoding heparan sulfate sulfotransferase; SCLS: systemic capillary leak syndrome

# Clinical dosing is guided by prediction from a validated *in vivo* surrogate-marker model, the bradykinin challenge

Bradykinin, injected *IV* in healthy volunteers, induces a transient, limited change in cardiac parameters (heart rate  $\uparrow$ , blood pressure  $\downarrow$ ) which can be blocked by pre-injection of a bradykinin B2 receptor antagonist (*e.g.*, icatibant or deucricitbant)

clinical

icatibant development program (shared mechanism)

As assessed by FDA, exposure of icatibant above  $EC_{85}$  for 6 hours correlates with clinical activity

nonclinical

Non-human primate study

Oral deucricitbant suppresses BK effect in NHP faster than SQ icatibant; target exposures for Phase 1

clinical

Phase 1 healthy volunteer study

$EC_{85}$  assessed in humans at 13.8 ng/mL; target exposure for studies in people living with HAE

clinical

RAPiDe-1 Phase 2 on-demand

Clinical efficacy correlates with exposure exceeding and remaining above  $EC_{85}$

clinical

CHAPTER-1 Phase 2 prophylaxis

Clinical efficacy demonstrated based on dose prediction targeting exposure above  $EC_{85}$

[https://www.accessdata.fda.gov/drugsatfda\\_docs/nda/2011/022150Orig1s000ClinPharmR.pdf](https://www.accessdata.fda.gov/drugsatfda_docs/nda/2011/022150Orig1s000ClinPharmR.pdf); Maurer et al 2020: Long-term effectiveness and safety of icatibant for the on-demand treatment of hereditary angioedema attacks: 10 years of the icatibant outcome survey (EAACI Poster #1118, June 6-8, 2020): <https://clinicaltrials.gov/ct2/show/NCT01034969>; <https://ir.pharvaris.com/static-files/33217945-6893-4f49-8a93-c80ea6fb2a31>; <https://doi.org/10.1016/j.jaci.2019.12.094>; BK: bradykinin; NHP: non-human primates; SQ: sub-cutaneous;  $EC_{85}$ : effective concentration achieving 85% inhibition of bradykinin effect

# Our strategy: Manage HAE with two oral products that utilize the same active ingredient for on-demand and prophylactic treatment

## deucricitbant (PHVS416)

Immediate-release capsule

rapid absorption

Aim to provide rapid and reliable symptom relief, through rapid exposure of attack-mitigating therapy in a convenient, small oral dosage form\*

## deucricitbant (PHVS719)

Extended-release tablet

sustained absorption

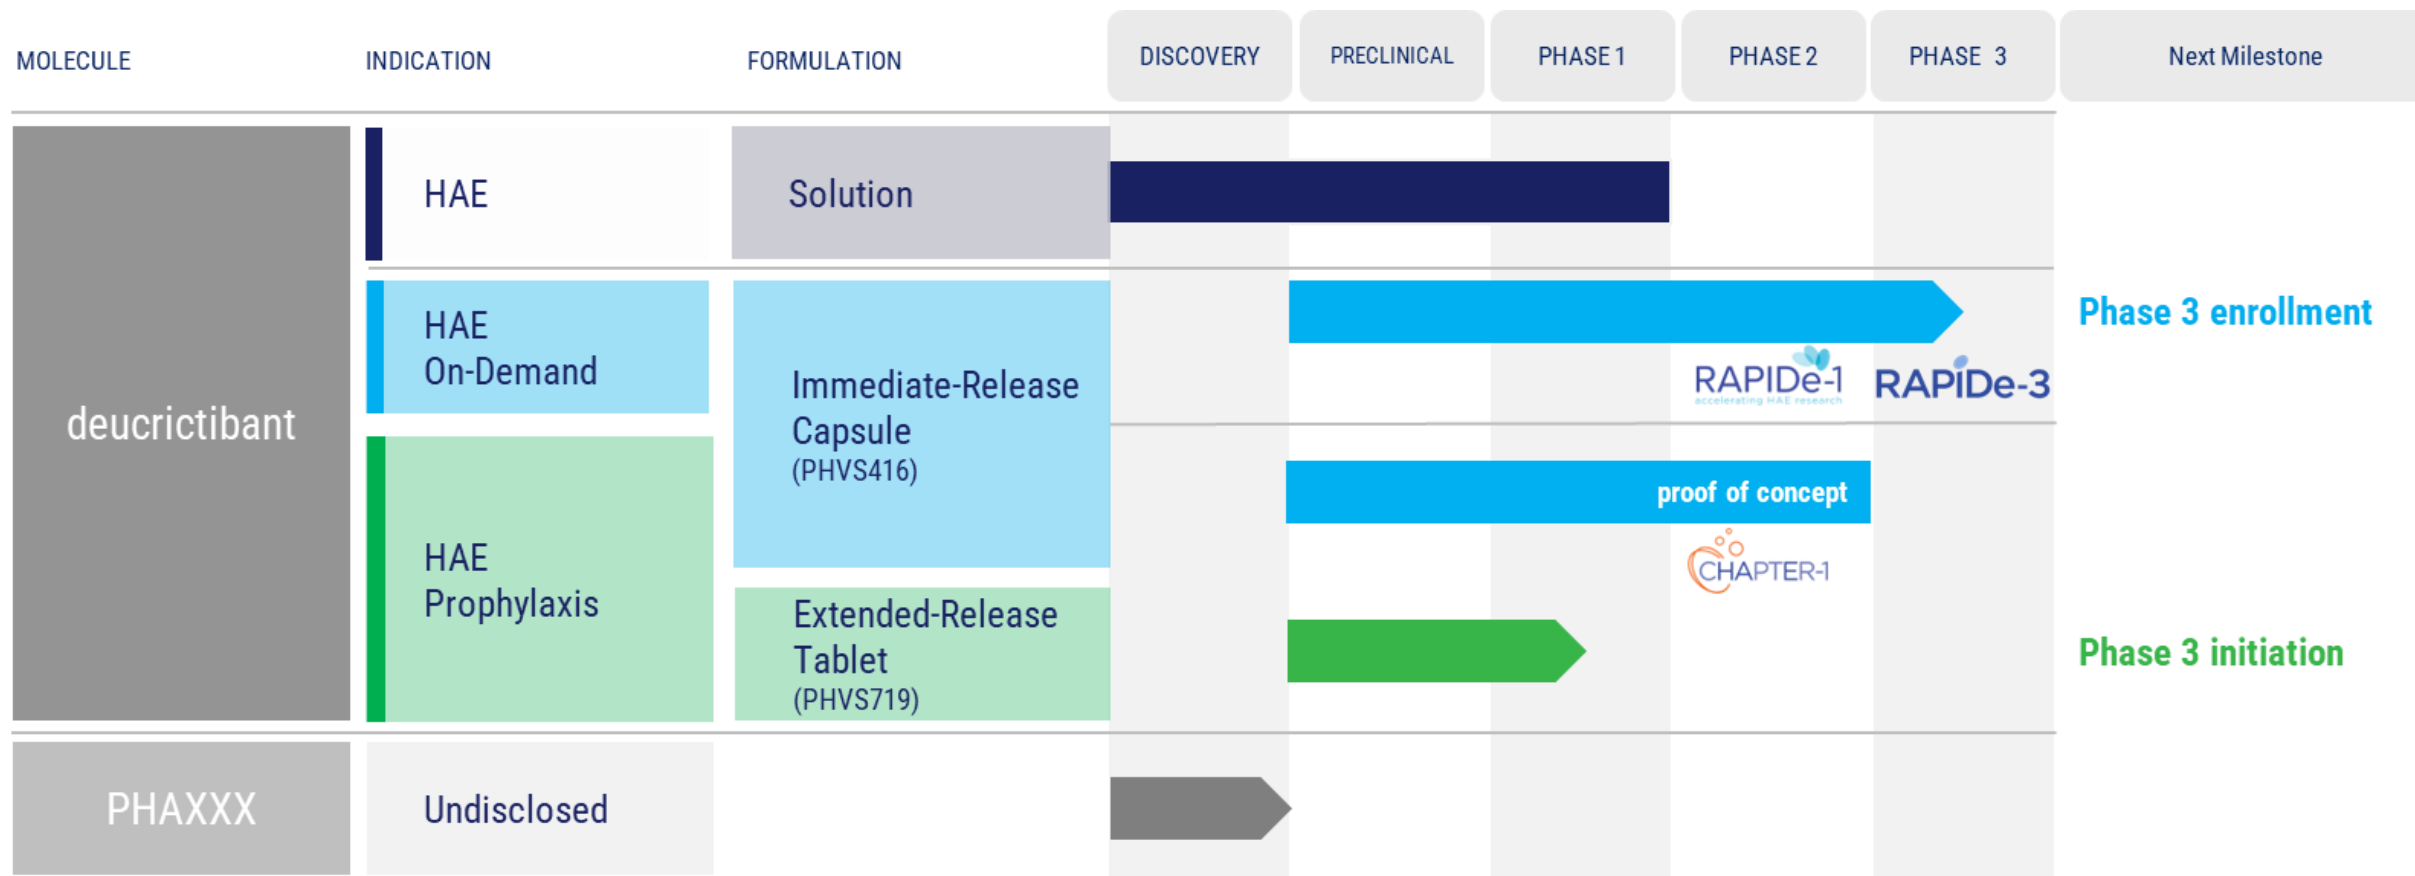

Aim to provide sustained exposure of attack-preventing medicine in a convenient, small oral dosage form\*

Deucricitbant has the potential to become the preferred therapy for people living with HAE to manage their condition

\*Aspirational; to be confirmed with clinical data

# Wholly-owned pipeline focused on bradykinin B2 receptor mechanism

# HAE: A rare, life-long genetic condition with significant burden from unpredictable, debilitating, and potentially lethal attacks of swelling

- Unpredictable frequency, location, timing, and severity
  - Multiple types of triggers
  - If untreated, attacks last multiple days
- Attacks are commonly painful, leading to hospitalization or multiple sick days
  - Half of people living with HAE experience a potentially life-threatening laryngeal attack at least once in their lifetime
- 1:10,000 to 1:50,000 Individuals affected by HAE globally
  - At least 6,600 people living with HAE in the U.S.
  - At least 8,900 people living with HAE in Europe
  - Globally, under-diagnosed/treated

Source: Nordenfelt et al, Acta Derm. Venereol 2016; 96: 540-545; Busse 2020 J Allergy Clin Immunol Pract; Bork et al 2021 J Allergy Clin Immunol

# Significant global unmet need affecting potentially up to 100,000 people living with HAE

Source: Proprietary company research 2022; Maurer et al. Consensus on diagnosis and management of Hereditary Angioedema in the Middle East: A Delphi initiative. World Allergy Organization Journal (2023);16:1-2; Zuraw et al. NEJM 2008;359:1027-1036; HAEi (haei.org), The State of Management of HAE in Latin America (2015); <https://haei.org/potentially-28000-hae-patients-in-china>; Ann Allergy Asthma Immunol 2015;114(6), 492-498; Allergol Int. (2020) Nov 6;S1323-8930(20)30135-0

# People living with HAE actively switch products, seeking improvement in efficacy, safety/tolerability, and convenience

**Efficacy** is a prime concern ...

... but **safety and tolerability** drive exploration of alternatives ...

... while **convenience** has become a key driver for overall preference

**People living with HAE should not have to compromise**

Source: Proprietary company research 2022

# People living with HAE use approved therapeutics for treatment ('on demand') or prevention of attacks ('prophylaxis')

- Estimated \$2.7B global HAE sales in 2022
- Estimated 15% CAGR 2021-2028

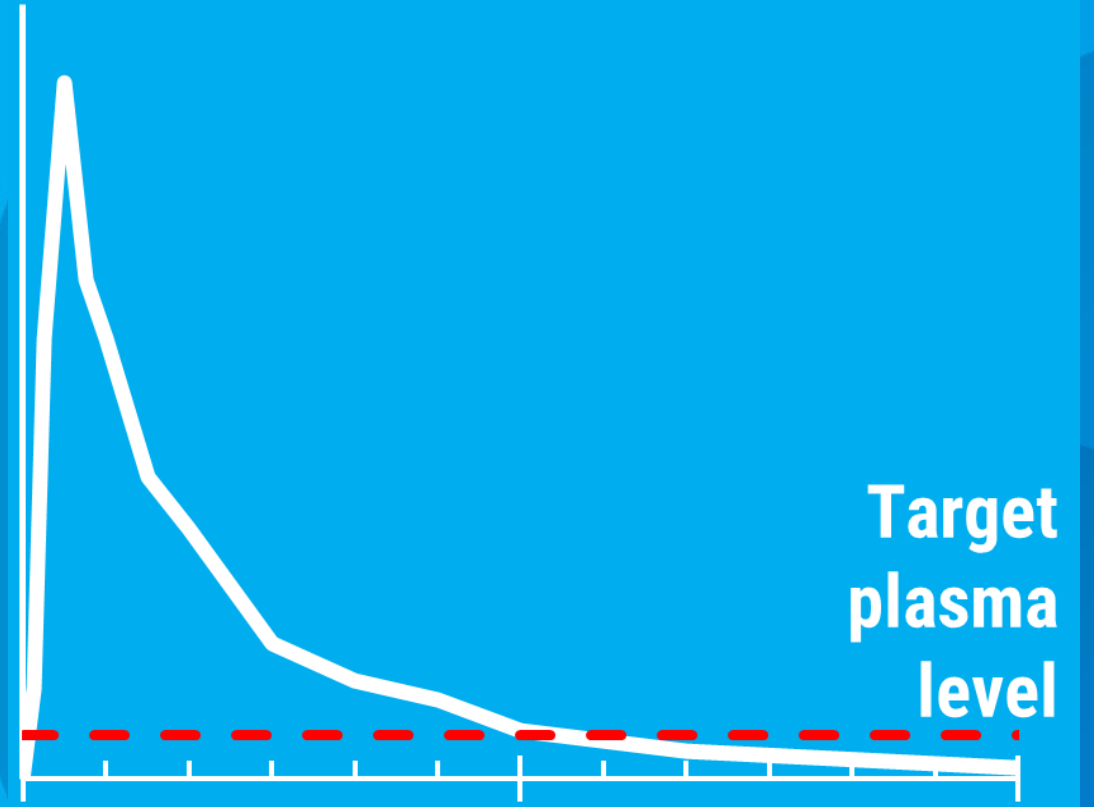

*No new on-demand therapies introduced since 2014*

*Three new prophylactic products approved since 2017: HAEGARDA, TAKHZYRO, and ORLADEYO*

Source: Quarterly filings (NYSE: TAK; NASDAQ: BCRX, PHAR); www.fda.gov; company research

*On-Demand*

Deucricitibant immediate-release capsules (PHVS416)

# Only injectable options: Significant unmet need in the on-demand treatment of HAE attacks

Treatment today means **painful** injections ...

... and often **one dose does not suffice** ...

... while finding a place to administer the drug causes an **extra burden**

As a result, people living with HAE often **delay or even avoid therapy** against clinical guideline recommendations

Source: Proprietary Pharvaris research, 2022 (representative sample of patients, n = 103, and doctors, n = 100)

# Not all attacks are treated: Physicians and patients report reasons for not treating most recent attack

- Physicians focus on attack severity and lack of a prescription
- Patients raise logistics and treatment dissatisfaction as key reasons for not treating an attack

Source: Mendivil et al., ACAAI 2023; <https://ir.pharvaris.com/static-files/1b7e2270-34fd-411c-8f64-a0da8b2a65ec>

# People living with HAE are hoping for better on-demand therapies that offer rapid symptom relief with one single, oral dose

1

Patients want **rapid onset of symptom relief** ...

... with **single dose durability**

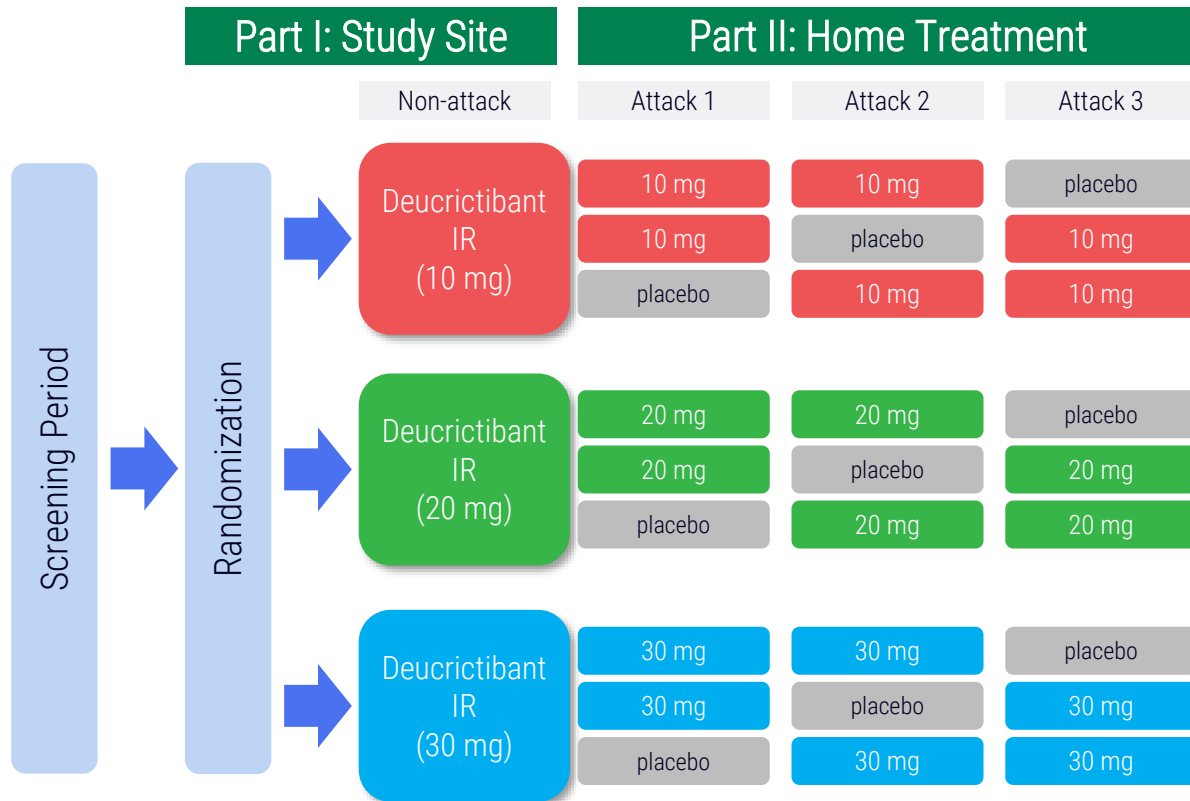

... in an **oral pill**

Effectively targeting the **bradykinin receptor** with a **small molecule** has the potential to deliver on their hopes

Source: Proprietary Pharvaris research, 2022 (representative sample of patients, n = 103, and doctors, n = 100)

# HAE RAPIDe-1 study: Phase 2 study of on-demand treatment of angioedema attacks in patients with HAE-1/2

- **Primary objective:** to evaluate angioedema symptom relief within four hours in acute attacks of patients with HAE-1/2
- **Study design:** Placebo-controlled, three dose levels
  - Part I: patients randomized and received a single dose of deucricitabant in clinic for PK and safety assessment
  - Part II: patients treated three attacks with two deucricitabant vs. one placebo
  - Before an attack was treated, one of the VAS-3 elements had to be at least hit a score of 30 and it had to be qualified by the clinician
- 74 HAE patients enrolled from ~30 sites in US, Canada, Europe, Israel, and UK

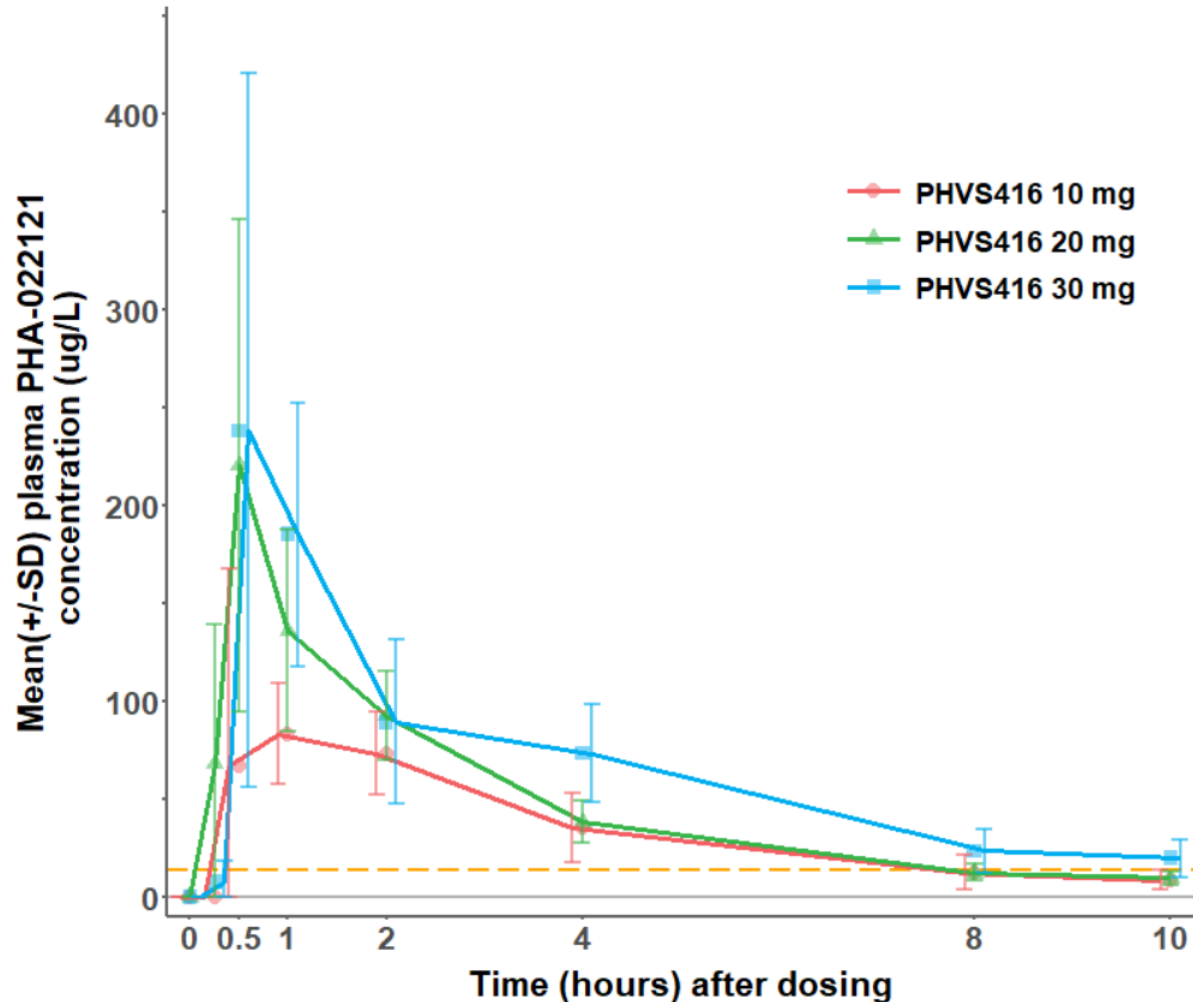

Source: [www.hae-rapide.com](http://www.hae-rapide.com); <https://clinicaltrials.gov/ct2/show/NCT04618211>; <https://hae-rapide.us/>; <https://www.clinicaltrialsregister.eu/ctr-search/search?query=2020-003445-11>

# Positive top-line Phase 2 data from RAPIDe-1 study of PHVS416 for the on-demand treatment of HAE attacks

- A total of 74 patients from 13 countries were enrolled to the study, 62 of them had 147 attacks that were treated with blinded study drug and included in efficacy evaluation
- The **primary endpoint** and all **key secondary endpoints** were **met**
- Deucrictribant IR showed **rapid onset of action**, **symptom relief**, and **resolution** of HAE attacks
- Deucrictribant IR **substantially reduced** the use of **rescue medications**
- Deucrictribant IR was **well tolerated** at all dose levels
  - There were no treatment-related SAEs, no treatment-related AEs of severe severity, and no AEs leading to treatment discontinuation

Consistent outcomes observed  
across all endpoints and types of measurements

# PK analysis in HAE patients confirmed rapid absorption on oral dosing, consistent with Phase 1 healthy volunteer studies

- Rapid absorption with mean plasma levels exceeding  $EC_{85}$  (13.8 ng/mL) within 30 min
- Mean plasma levels maintained  $>EC_{85}$  for approximately
  - 8 h at 10 mg or 20 mg
  - $>10$  h at 30 mg dose
- $EC_{85}$  levels established using **bradykinin challenge**, a human surrogate endpoint study in healthy volunteers

# Primary endpoint: Deucricitbant IR significantly reduced attack symptoms by VAS-3 at 4h

Difference from placebo in change from pre-treatment to 4 h post-treatment, least-squares mean (95% CI)

PHVS416 10 mg	-16.75 (-21.52, -11.97)	$p < 0.0001^\dagger$
PHVS416 20 mg	-15.02 (-20.22, -9.81)	$p < 0.0001$
PHVS416 30 mg	-16.28 (-21.27, -11.29)	$p < 0.0001$
Combined PHVS416	-16.08 (-19.87, -12.29)	

Median VAS-3 at pre-treatment ranges from 24.33-27.00 across different dose levels

$^\dagger$ Nominal p-value; VAS assessed every 30 minutes up to 4 hours post-treatment, then at 5, 6, 8, 24, 48 hours; N = The number of attacks in the mITT Analysis Set. Attacks in mITT Analysis Set refer to attacks treated with blinded study drug that had non-missing VAS result at pre-treatment and at least one non-missing VAS result post-treatment. VAS-3 = electronically captured, numerically assisted visual analogue scale. Figure is based on descriptive summary of mean and SEM (standard error of the mean). Least-squares mean differences, CIs, and p-values come from a mixed-effects model with repeated measures (MMRM). Data after rescue medication use is not included. The combined PHVS416 result is based on post-hoc analysis using a similar MMRM with all three active doses combined vs placebo

# Deucrictibant IR significantly shortened time to onset of symptom relief (30% reduction in VAS-3)

## Median time in hours (95% CI)

Placebo	8.0 (7.6, 46.9)	
PHVS416 10 mg	2.1 (1.5, 2.9)	$p < 0.0001^{\dagger}$
PHVS416 20 mg	2.7 (1.9, 3.5)	$p = 0.0021$
PHVS416 30 mg	2.5 (1.9, 3.8)	$p < 0.0001$
Combined PHVS416	2.4 (2.0, 2.9)	

*VAS assessed every 30 minutes up to 4 hours post-treatment, then at 5, 6, 8, 24, 48 hours*

Nominal p-value; N = The number of attacks in the mITT Analysis Set. Median time based on Kaplan-Meier estimates. p-values based on a marginal Cox proportional hazards model. The combined PHVS416 results are based on post-hoc analyses to provide a reference of the result by pooling all three active doses.

# In a post-hoc analysis, patients on deucricitibant achieved end of progression by VAS-3 within 25 to 26 min

Source: Riedl et al., ACAA1 2023; <https://ir.pharvaris.com/static-files/0bae214b-7ff8-49ec-8340-1bb60a5935b9>

# Deucrictibant IR significantly reduced time to almost complete or complete symptom relief (all individual VAS $\leq 10$ )

## Median time in hours (95% CI)

Placebo	42.0 (22.0, 48.1)	
Deucrictibant IR 10 mg	5.8 (3.6, 7.5)	$p < 0.0001^\dagger$
Deucrictibant IR 20 mg	20.0 (4.5, 20.0)	$p = 0.0127$
Deucrictibant IR 30 mg	20.0 (6.0, 20.1)	$p = 0.0001$
Combined Deucrictibant IR	7.5 (5.9, 20.0)	

*VAS assessed every 30 minutes up to 4 hours post-treatment, then at 5, 6, 8, 24, 48 hours*

<sup>†</sup>Nominal p-value; N = The number of attacks in the mITT Analysis Set. Median time based on Kaplan-Meier estimates. p-values based on a marginal Cox proportional hazards model. The combined PHVS416 results are based on post-hoc analyses to provide a reference of the result by pooling all three active doses.

# Patients treating with deucricitbant IR used substantially less rescue medication

N = The number of attacks in the mITT Analysis Set

# Deucrictibant IR was well tolerated at all doses

- No treatment-related SAEs or AEs of severe severity
- No AEs leading to treatment discontinuation
- No treatment-related AEs of laboratory parameters, vital signs, or ECG parameters
- Few treatment-related AEs reported within 48 h after administration of study drug

	Part I (Non-Attack)			Part II (Attack 1,2,3)			
	10 mg N=23	20 mg N=24	30 mg N=25	Placebo N=53	10 mg N=38	20 mg N=29	30 mg N=36
Subjects (Part I) or Attacks (Part II) with any treatment related AEs	1 (4.3%)	1 (4.2%)	-	1 (1.9%)	-	-	1 (2.8%)
Headache	-	1 (4.2%)	-	-	-	-	-
Nausea	1 (4.3%)	-	-	-	-	-	1 (2.8%)
Vomiting	-	-	-	-	-	-	1 (2.8%)
Fatigue	-	-	-	-	-	-	1 (2.8%)
Blister	-	-	-	1 (1.9%)	-	-	-

N= The number of subjects (Part I) and number of attacks (Part II) in the Safety Analysis Set. The Safety Analysis Set includes all randomized patients who received any dose of study drug. Treatment-related AEs within 48 h post-treatment are included

# Both doctors and patients consider an oral acute therapy would increase likelihood that patients would treat more attacks, earlier

Source: Proprietary Pharvaris research, 2022 (representative sample of patients, n = 103, and doctors, n = 100)

# We have renamed VAS to AMRA, reflecting its evolution from a paper-based to electronic attack assessment

## What is a Visual Analogue Scale (VAS)?

- Simple, reproducible, paper-based tool to allow patient self-assessment of symptom severity
- Analog scale with an 'X' hand-marked to reflect severity of attack

2008–2011  
Jerini-Shire

## Why do we need change?

- Addressing user experience to leverage technology and accuracy of data collection<sup>1</sup>
- HAE ODT trials require frequent assessments to be recorded by participants; a digital tool is an accessible method for timely data input

## How has Pharvaris evolved the VAS to a contemporary electronic standard?

- Electronic Clinical Outcome Assessment (eCOA)
- Presents the numeric scale vertically (e.g from 'Worst possible' = 100 to 'No symptom' = 0)
- Participants can see in real time the exact score (between 0 and 100) selected
- Performed at home

2023  
Pharvaris

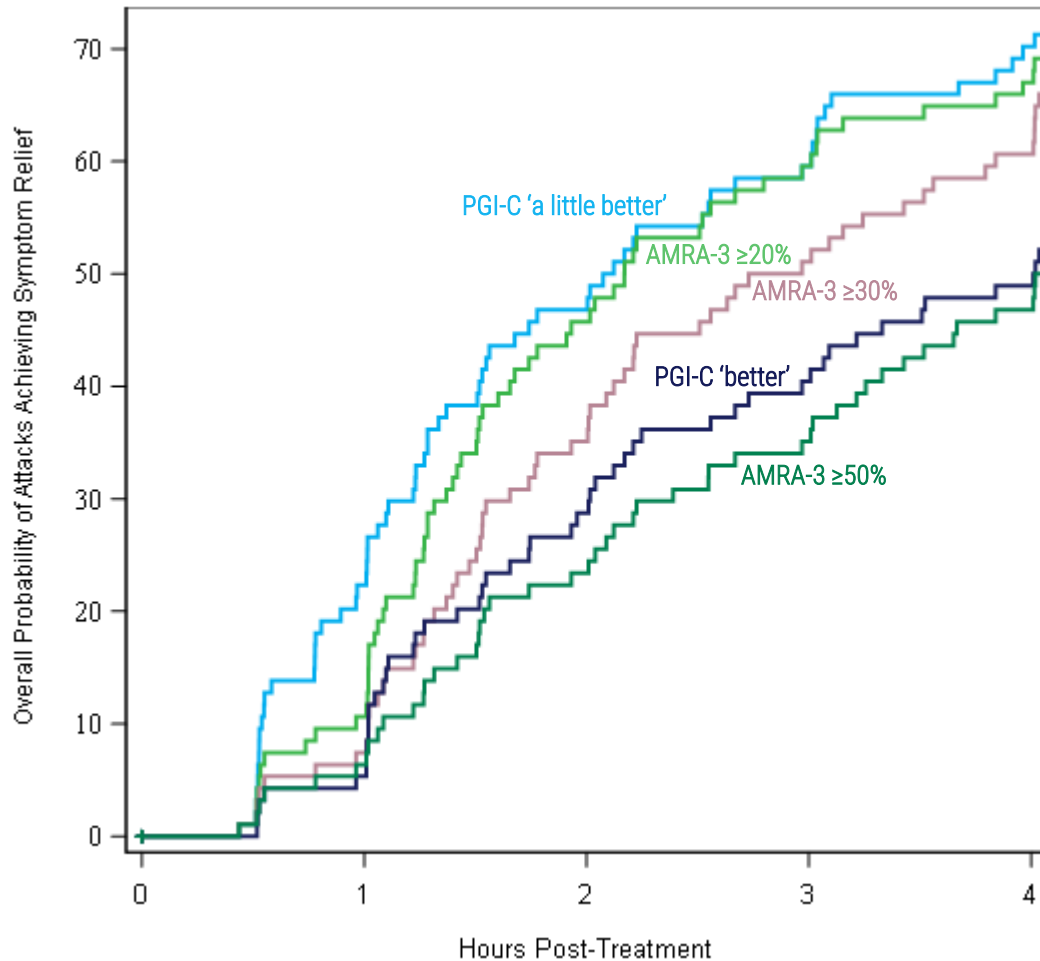

A numeric rating scale requires  
a self-explanatory name

Angioedema symptom Rating scale (AMRA)

<sup>1</sup> CDER. Patient-Focused Drug Development: Selecting, Developing, or Modifying Fit-for Purpose Clinical Outcome Assessments. FDA. June 2022. Accessed December 18, 2023. <https://www.fda.gov/media/159500/download>

# In a real-world study using standard-of-care therapy, similar median time to symptom relief for AMRA-3 $\geq 20\%$ and PGI-C 'a little better'

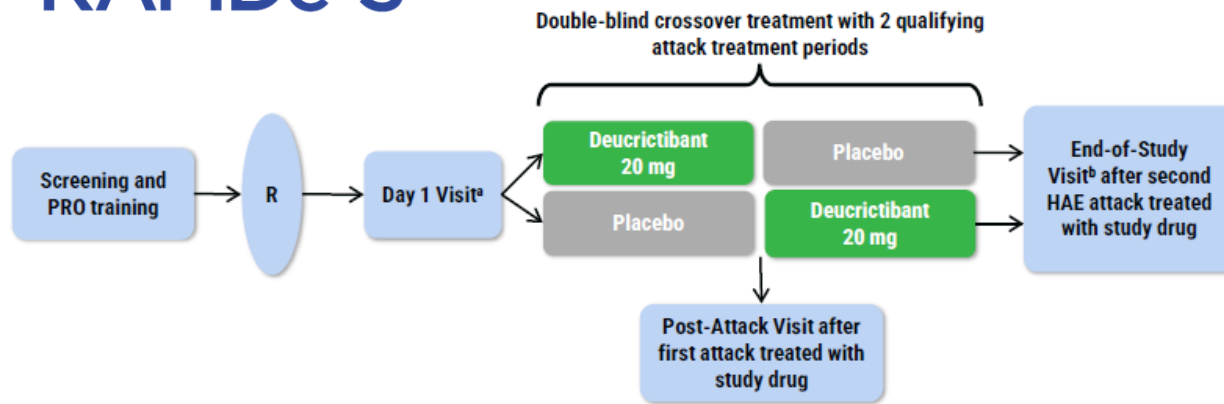

PRO instrument	Events (n)	Median time to, h (95% CI)
PGI-C "a little better"	90	2.147 (1.518, 3.017)
AMRA-3 20% reduction from pre-treatment	89	2.191 (1.655, 3.035)
AMRA-3 30% reduction from pre-treatment	89	2.990 (2.123, 4.011)
PGI-C "better"	92	3.925 (2.969, 5.055)
PGI-S 1-level reduction	91	4.012 (3.015, 5.026)
AMRA-3 50% reduction from pre-treatment	88	4.354 (3.256, 6.093)

- Similar median time to symptom relief using AMRA-3  $\geq 20\%$  reduction from pre-treatment and PGI-C "a little better" on two consecutive timepoints

Source: Mendivil et al., UCARE 2023 ([ir.pharvaris.com/static-files/f2d3d4ea-2526-4885-9951-a90015add462](https://ir.pharvaris.com/static-files/f2d3d4ea-2526-4885-9951-a90015add462))

# HAE RAPiDe-3 study: A global Phase 3 study of on-demand treatment of angioedema attacks in patients with HAE-1/2

## RAPiDe-3

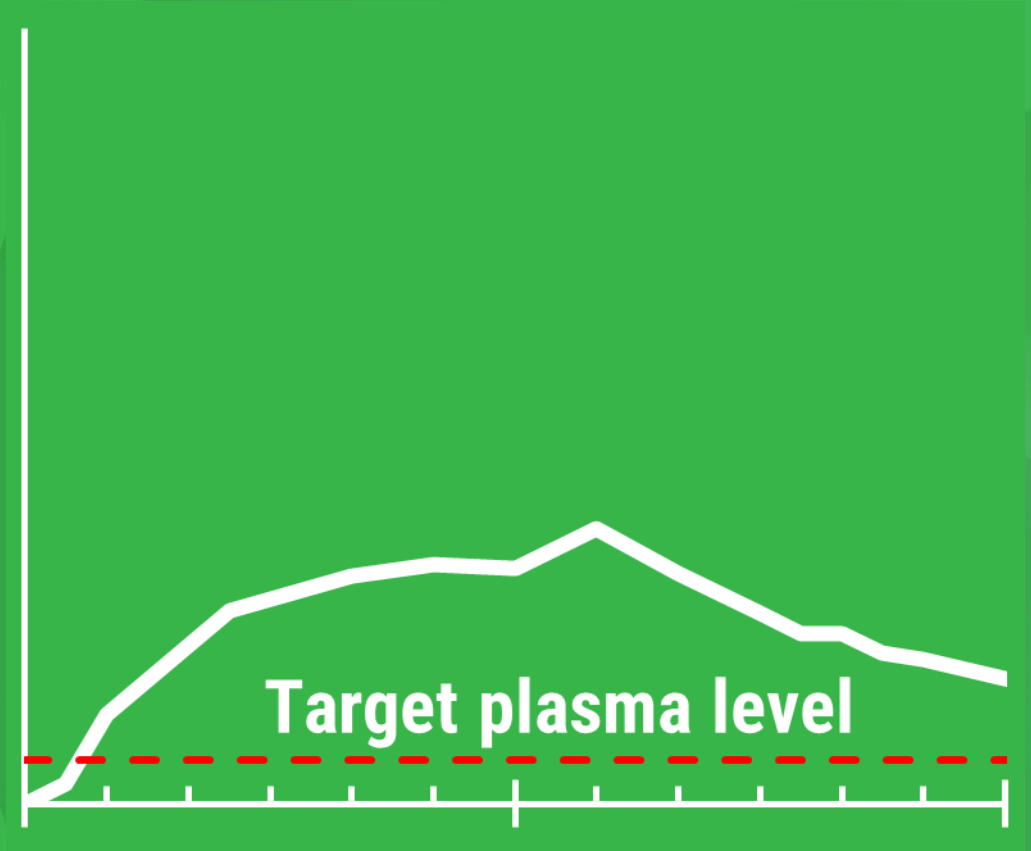

## ■ Endpoints

- Onset of symptom relief
  - Patient Global Impression of Change (PGI-C) rating of at least “a little better” for two consecutive timepoints within 12 hours post-treatment
- Secondary
  - Time to end of progression of attack symptoms, substantial symptom relief, and symptom resolution
    - PGI-C, Patient Global Impression of Severity (PGI-S), Angioedema symptom Rating scale (AMRA)
  - Use of rescue medication
- Incidence of treatment-emergent adverse events

## ■ Rollover to open-label extension

# *Long Term Prophylaxis*

Deucricitibant extended-release tablets (PHVS719)

# People living with HAE are seeking highly effective, well-tolerated and less burdensome prophylactic therapies

Injectable-like  
efficacy

Well-tolerated

Easy, painless  
administration

An effective oral bradykinin B2 receptor antagonist has  
the potential to deliver on their hopes

Proprietary Pharvaris research, 2022 (representative sample of patients, n = 103, and doctors, n = 100)

# CHAPTER-1, a Phase 2 prophylactic study of deucricitibant in HAE

Primary endpoint met: 84.5% (p=0.0008) reduction in monthly attack rate versus placebo\*

- 92.3% reduction in occurrence of moderate and severe attacks\*
- 92.6% reduction in occurrence of attacks treated with on-demand medication\*
- Clinically meaningful results across primary, secondary, and health-related quality of life endpoints
- Deucricitibant well-tolerated at both doses

\*40 mg/day deucricitibant treatment group; %reduction in monthly attack rate is based on a Poisson regression model

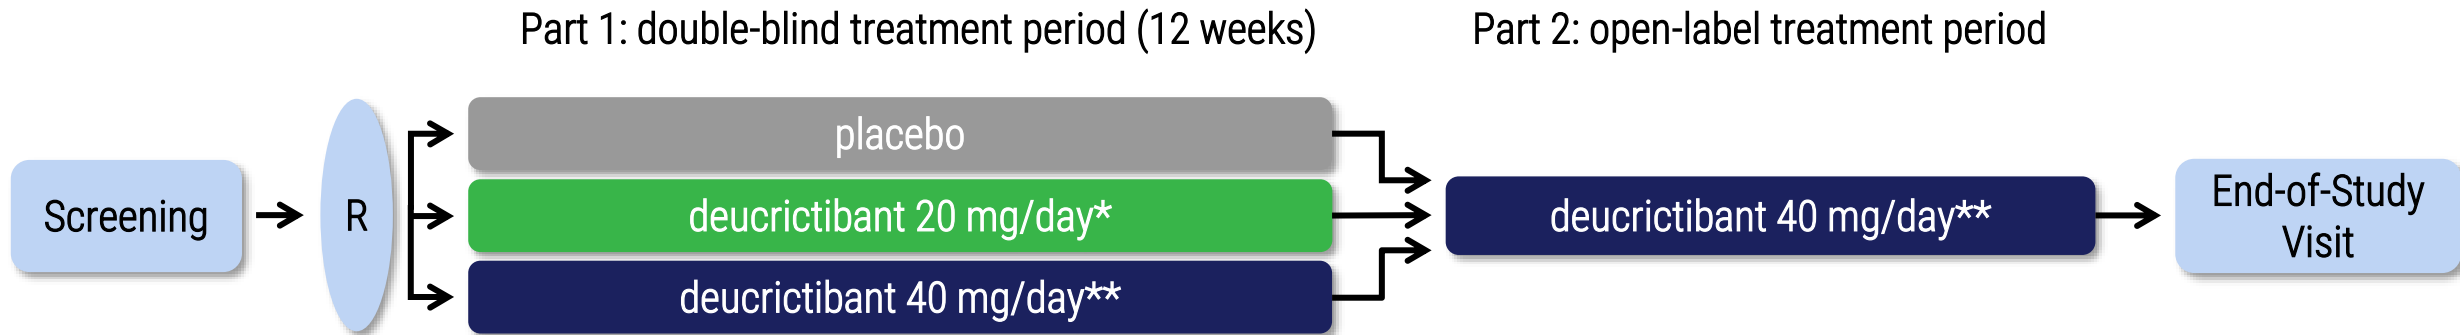

Note: all attacks reported herein are investigator-confirmed; attack rate is number of attacks per month of exposure, also referred to as time-normalized number of attacks; all statistical analyses comparing deucricitibant and placebo are made without adjustment for multiplicity.

# CHAPTER-1 study design

Double-blind, placebo-controlled Phase 2 study evaluating deucricitibant for long-term prophylaxis in HAE-1/2

- 34 participants enrolled in North America and Europe

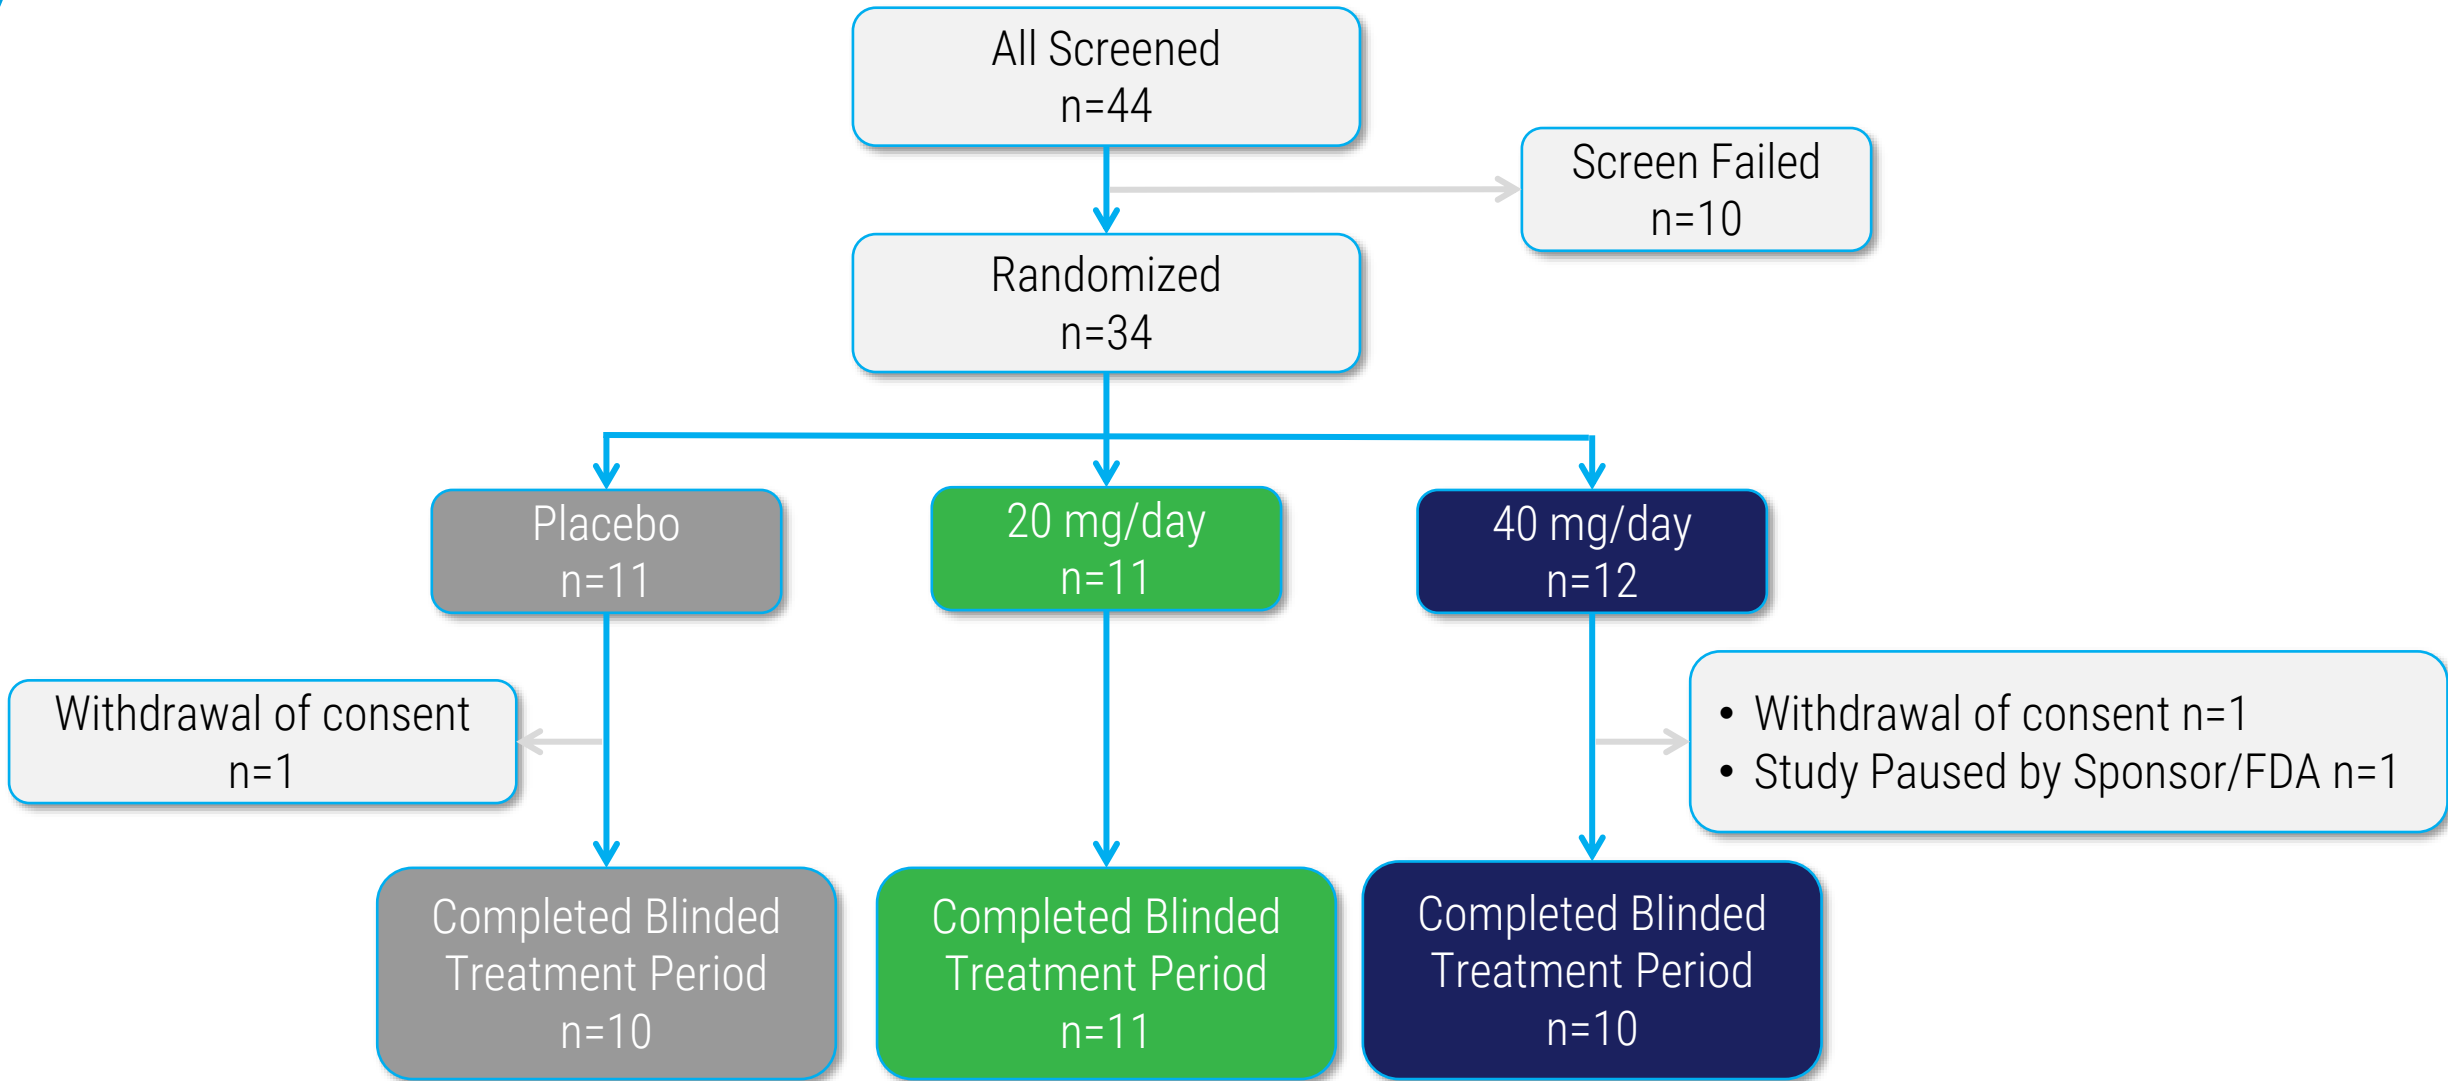

R = randomization;

\*deucricitibant 20 mg/day = deucricitibant immediate-release capsules (PHVS416) 10 mg twice daily

\*\*deucricitibant 40 mg/day = deucricitibant immediate-release capsules (PHVS416) 20 mg twice daily

# Participant disposition

20 mg/day = deucricitabant immediate release (IR) capsules 10 mg twice daily; 40 mg/day = deucricitabant IR capsules 20 mg twice daily; n = number of participants.

# Balanced demographics and baseline characteristics

	Placebo N=11	20 mg/day N=11	40 mg/day N=12	All N=34
Age in years – Mean	41.4	38.4	40.8	40.2
Sex: M/F – n	3/8	6/5	4/8	13/21

Attack free during treatment period	0	6 /11(55%)	4/10 (40%)

20 mg/day = deucricitabant immediate release (IR) capsules 10 mg twice daily; 40 mg/day = deucricitabant IR capsules 20 mg twice daily. N = number of randomized participants.

LS mean = least squares mean. CI = confidence interval.

\*Results of monthly attack rates are based on Poisson regressions adjusted for baseline attack rate and time on treatment. No multiplicity adjustment was applied. Nominal p-value < 0.01 for all secondary endpoints included in this section comparing deucricitabant with placebo.

\*\*Participants with <4 weeks of treatment (2 participants on 40 mg/day) were not included in the summaries of proportions achieving threshold reduction of attack rate from baseline. Nominal p-value < 0.05 for all secondary endpoints included in this section comparing deucricitabant with placebo.

# As seen in a single-dose Phase 1 PK study, deucricitbant XR demonstrates QD potential: Phase 3 dosage form

- Deucricitbant IR and XR well tolerated
  - No SAEs or severe TEAEs
- Deucricitbant XR extended-release maintained exposure above EC<sub>85</sub> for >24h with and without food
  - Similar AUC<sub>24h</sub> as 40 mg deucricitbant IR dosed with food

Deucricitbant XR anticipated to maintain higher trough exposure relative to BID deucricitbant IR

Source: Company data

# Our strategy: Manage HAE with two oral products that utilize the same active ingredient for on-demand and prophylactic treatment

## deucricitbant (PHVS416)

Immediate-release capsule

rapid absorption

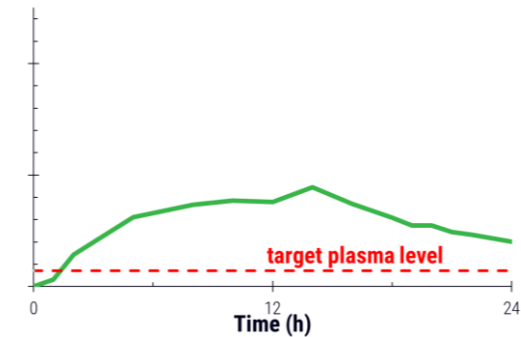

Aim to provide rapid and reliable symptom relief, through rapid exposure of attack-mitigating therapy in a convenient, small oral dosage form\*

## deucricitbant (PHVS719)

Extended-release tablet

sustained absorption

Aim to provide sustained exposure of attack-preventing medicine in a convenient, small oral dosage form\*

Based on the results in RAPIDe-1 and CHAPTER-1, deucricitbant has the potential to become the preferred option to treat and prevent HAE attacks

\*Aspirational; to be confirmed with clinical data

# Focused on unmet need in the treatment of hereditary angioedema (HAE) and other bradykinin-mediated diseases

## Competitive product profile

- Deep expertise in bradykinin/B2 receptor biology and chemistry
- Orally available, small molecule targeting the **validated bradykinin B2 receptor pathway**
- **Positive top-line Phase 2 data in HAE:**
  - RAPIDe-1 study for **on-demand treatment** meets **all primary and key secondary endpoints**
    - RAPIDe-3 Phase 3 study currently enrolling
  - CHAPTER-1 study in **prophylaxis** meets **primary endpoint** and showed **clinically meaningful improvements** for secondary endpoints
    - Preparing for initiation of CHAPTER-3 Phase 3 study

## Large market opportunity

- **Large global HAE market:**
  - >\$2 billion with predicted 15% CAGR
- Potential portfolio expansion into other BK-mediated angioedema and diseases through **B2-receptor pathway expertise**

## Strong fundamentals

- **World-wide operations:** the Netherlands, U.S., and Switzerland (headquarters)
- Strong financial position, cash runway at least two years:
  - Approximately **€368M cash** as of March 31, 2024
- Experienced management **team with successful track record** in HAE drug design and development
- **Strong IP on novel lead and backup series**
  - Primary CoM granted in multiple territories, initial term to 2038
- **FDA orphan drug designation**

NASDAQ: PHVS

*Aspiring to free people from HAE or  
other bradykinin-mediated diseases*

# Appendix

Additional RAPIDe-1 top-line clinical data

# RAPIDe-1: Primary, key secondary and other endpoints

## Primary Endpoint

- Change in VAS-3 score from pre-treatment to 4h post-treatment

## Key Secondary Endpoints

- Time to onset of symptom relief (VAS-3;  $\geq 30\%$  reduction from the pre-treatment score)
- Time to a  $\geq 50\%$  reduction in VAS-3 score from the pre-treatment score
- Time to almost complete and complete symptom relief (VAS; all 3 items  $\leq 10$ )
- Change of MSCS (mean symptom complex severity) score from pre-treatment to 4h post-treatment
- TOS (treatment outcome score) at 4h post-treatment

## Other Endpoints Included in the top-line Outputs

- Proportion of study-drug-treated attacks requiring the use of HAE rescue medication
- Time to the first use of HAE rescue medication
- Safety and PK assessments

# Results summary of primary efficacy endpoint

Combined PHVS416	3.9 (3.0, 4.8)	

<sup>†</sup>Nominal *p*-value; VAS assessed every 30 minutes up to 4 hours post-treatment, then at 5, 6, 8, 24, 48 hours; N = The number of attacks in the mITT Analysis Set. Median time based on Kaplan-Meier estimates. *p*-values based on a marginal Cox proportional hazards model. The combined PHVS416 results are based on post-hoc analyses to provide a reference of the result by pooling all three active doses.

# MSCS and TOS: definitions

- Validated patient-reported outcome measures to comprehensively capture symptom severity and change of HAE attacks
- MSCS (Mean Symptom Complex Severity) score is a point-in-time measure of symptom severity:
  - Patients rated the severity of each affected symptom on a categorical scale (0 = normal, 1 = mild, 2 = moderate, 3 = severe)
  - Calculated as average score from all affected anatomic sites of attack (symptom complexes or SC) pre-treatment
  - Decrease in MSCS score reflects improvement in symptom severity
- TOS (Treatment Outcome Score) is a measure of symptom response to treatment:
  - Patient assessment of response for each affected SC recorded on categorical scale (significant improvement [100], improvement [50], same [0], worsening [-50], significant worsening [-100])
  - Calculated as weighted average of the response at all SC using pre-treatment severity as the weight
  - TOS value >0 reflects improvement in symptoms from pre-treatment

# Greater improvement in MSCS and TOS with PHVS416 than placebo

	Placebo	PHVS416 10 mg	PHVS416 20 mg	PHVS416 30 mg	Combined PHVS416
<b>Change in MSCS score at 4 hours</b>					
n	40	32	26	27	85
least-squares mean (95% CI)	-0.29 (-0.51, -0.08)	-1.08 (-1.33, -0.83)	-0.91 (-1.19, -0.62)	-0.68 (-0.95, -0.40)	-0.90 (-1.06, -0.75)
